

# NCP-DB-6.10 Valid Braindumps & NCP-DB-6.10 Exam Fees

Top Rated Features of Nutanix NCP-DB-6.10 Practice Test Questions. The GuideTorrent is committed to making the Nutanix NCP-DB-6.10 exam preparation journey simple, smart, and swift. To meet this objective the GuideTorrent is offering NCP-DB-6.10 practice test questions with top-rated features. These features are updated and real Nutanix NCP-DB-6.10 Exam Questions, availability of Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 NCP-DB-6.10 exam real questions in three easy-to-use and compatible formats, three months free updated Nutanix NCP-DB-6.10 exam questions download facility, affordable price and 100 percent Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 NCP-DB-6.10 exam passing money back guarantee.

If you are a beginner, start with the NCP-DB-6.10 learning guide of practice materials and our NCP-DB-6.10 exam questions will correct your learning problems with the help of the test engine. All contents of NCP-DB-6.10 training prep are made by elites in this area rather than being fudged by laymen. Let along the reasonable prices which attracted tens of thousands of exam candidates mesmerized by their efficiency by proficient helpers of our company. Any difficult posers will be solved by our NCP-DB-6.10 Quiz guide.

## NCP-DB-6.10 Exam Fees - Valid NCP-DB-6.10 Test Materials

Our NCP-DB-6.10 preparation exam have assembled a team of professional experts incorporating domestic and overseas experts and scholars to research and design related exam bank, committing great efforts to help the candidates to pass the NCP-DB-6.10 exam. Most of the experts have been studying in the professional field for many years and have accumulated much experience in our NCP-DB-6.10 Practice Questions. Our company is considerably cautious in the selection of talent and always hires employees with store of specialized knowledge and skills to help you get the dreaming NCP-DB-6.10 certification.

## Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 Sample Questions (Q136-Q141):

NEW QUESTION # 136

An administrator needs to create a Network Profile for NDB HA VMs spread across three Nutanix clusters. What type of Network Profile is required for NDB API and Repository VMs?

- A. PostgreSQL single instance managed outside NDB
- **B. PostgreSQL HA instance managed outside NDB**
- C. PostgreSQL single instance managed in NDB
- D. PostgreSQL HA instance managed in NDB

**Answer: B**

Explanation:

When creating a Network Profile for NDB HA VMs (e.g., NDB API and Repository VMs) spread across three Nutanix clusters, the required type is PostgreSQL HA instance managed outside NDB. NDB HA relies on a PostgreSQL database for its control plane, and in a multi-cluster HA setup, this PostgreSQL instance must be configured for high availability (e.g., using streaming replication) outside NDB's management. The Network Profile must support this external HA instance's networking requirements (e.g., VLANs, IP ranges) to ensure connectivity across clusters.

#### NEW QUESTION # 137

A customer has NDB configured to create snapshots of their production databases every 4 hours. A developer requires a copy of the current production data at 7:00am of each day. What is the most efficient way to meet this requirement?

- A. Configure a done with a daily Data Refresh Schedule at 7:00am.
- B. Run a script which creates a clone from the latest snapshot at 7:00am.
- C. Authorize the developer in RBAC to create clones as required.
- **D. Configure Time Machine to create a clone from a daily snapshot at 7:00am.**

**Answer: D**

Explanation:

Time Machine is a feature of Nutanix Era that allows you to create and manage snapshots of your databases. You can use Time Machine to create clones from any snapshot, either manually or automatically. You can also configure Time Machine to create clones from snapshots based on a schedule, such as daily, weekly, or monthly. This way, you can ensure that your clones are always up to date with the latest data from your production databases. In this scenario, the most efficient way to meet the developer's requirement is to configure Time Machine to create a clone from a daily snapshot at 7:00am. This will save the developer's time and effort, as well as reduce the storage consumption by using the existing snapshots.

#### NEW QUESTION # 138

What must be completed within NDB before patching a Linux OS?

- A. Update the database.
- **B. Configure the repository.**
- C. Update the software profile version.
- D. Configure database high availability.

**Answer: B**

Explanation:

Before patching a Linux OS on a database server VM provisioned using NDB, you must configure the repository for the OS updates. This can be done by creating a Repository Profile in NDB and specifying the URL, username, and password for the repository. The Repository Profile can be applied to one or more database server VMs during the provisioning process or later. By configuring the repository, you ensure that NDB can access and download the latest OS patches from a trusted source.

#### NEW QUESTION # 139

The NDB user interface can display which language option?

- A. German
- **B. Japanese**

- C. French
- D. Korean

**Answer: B**

Explanation:

The NDB user interface supports multiple languages, including English, Chinese, and Japanese.

You can change the language pReference: in the NDB settings page. The NDB user interface does not support Korean, French, or German languages at this time.

#### **NEW QUESTION # 140**

A quality assurance team noticed a significant change between a cloned database they are currently using versus the one used one week ago. They created an SQL script to verify the differences. Which task should be performed by an NDB administrator to provide the correct database to the QA team?

- A. Create a clone database from a snapshot.
- B. Perform a Log Catch Up operation.
- C. Replicate a selected snapshot.
- **D. Clone database selecting Point in Time data.**

**Answer: D**

Explanation:

When a quality assurance (QA) team notices a significant change between a cloned database currently in use and one used a week ago, and they have an SQL script to verify differences, the NDB administrator needs to provide a clone reflecting the database state from a week ago. The task "Clone database selecting Point in Time data" allows the administrator to select a specific point-in-time snapshot (e.g., from a week ago) using the Time Machine feature. This creates a new clone with the exact data state at that time, enabling the QA team to compare it with the current clone.

#### **NEW QUESTION # 141**

.....

If you study on our NCP-DB-6.10 study engine, your preparation time of the NCP-DB-6.10 exam will be greatly shortened. Firstly, the important knowledge has been picked out by our professional experts. You just need to spend about twenty to thirty hours before taking the Real NCP-DB-6.10 Exam. Also, our workers have made many efforts on the design of the system. You will never feel bored when you study on our NCP-DB-6.10 preparation materials. You will find learning can also be a pleasant process.

**NCP-DB-6.10 Exam Fees:** <https://www.guidetorrent.com/NCP-DB-6.10-pdf-free-download.html>

Many people fail the exam NCP-DB-6.10 and the exam cost is quite high, Partner With GuideTorrent NCP-DB-6.10 Exam Fees, It is inconvenient to buy the online test engine of NCP-DB-6.10 Exam Fees - Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 study guide that cannot be installed on many electronic devices, Nutanix NCP-DB-6.10 Valid Brindumps So our company has taken all customers' requirements into account, It will just take one or two days to practice NCP-DB-6.10 reliable test questions and remember the key points of NCP-DB-6.10 test study torrent, if you do it well, getting NCP-DB-6.10 certification is 100%.

In essence, this text lets the user know that the query mechanism NCP-DB-6.10 did not crash, Ferner relies on plain-English stories, pictures, and Python examples to communicate the ideas of machine learning.
