Axis Network Video Exam

1

**New Axis ANVE Test Materials & ANVE Test Assessment**

Our experts have great familiarity with ANVE real exam in this area. With passing rate up to 98 to 100 percent, we promise the profession of them and infallibility of our ANVE practice materials. So you won't be pestered with the difficulties of the exam any more. What is more, our [ANVE Exam Dumps](#) can realize your potentiality greatly. Unlike some irresponsible companies who churn out some ANVE study guide, we are looking forward to cooperate fervently.

In conclusion, we strongly recommend using our Axis ANVE exam dumps to prepare for the Axis ANVE certification. It is the best way to ensure success. With our Axis [ANVE Axis Network Video Exam](#) practice questions, you can get the most out of your studying and maximize your chances of passing your Axis ANVE Axis Network Video Exam exam.

DumpsMaterials has already become a famous brand all over the world in this field since we have engaged in compiling the ANVE practice materials for more than ten years and have got a fruitful outcome. You are welcome to download the ANVE free demos to have a general idea about our ANVE training materials. We have prepared three kinds of different versions of our ANVE Practice Test: PDF, Online App and software. Furthermore, our customers can accumulate exam experience as well as improving their exam skills in the ANVE mock exam. And your success is 100 guaranteed for our high pass rate as 99%.

The ANVE certification is a valuable credential for professionals working in the field of network video surveillance, as it demonstrates their expertise and commitment to staying up-to-date with the latest technologies and best practices. Axis Network Video Exam certification is recognized by a wide range of organizations in the security and surveillance industry, and can help professionals advance their careers and increase their earning potential.

Axis ANVE Certification Exam is a vendor-neutral certification program that covers a broad range of topics related to network video technologies. It is designed to provide professionals with the knowledge and skills necessary to design, install, configure, and manage Axis network video systems. ANVE exam is recognized globally and is an essential requirement for professionals seeking to advance their careers in the field of network video surveillance.

## Premium ANVE Files - Actual ANVE Test

Our ANVE training materials are designed to help users consolidate what they have learned, will add to the instant of many training, the user can test their learning effect in time after finished the part of the learning content, have a special set of wrong topics in our ANVE guide torrent, enable users to find their weak spot of knowledge in this function, iterate through constant practice, finally reach a high success rate. As a result, our ANVE study questions are designed to form a complete set of the contents of practice can let users master knowledge to pass the ANVE exam.

### Axis Network Video Exam Sample Questions (Q224-Q229):

#### NEW QUESTION # 224

This image represents an enlargement of an actual surveillance image. How could you improve the overall quality of the image? (Choose two)

- A. Change to a camera with higher resolution
- B. Increase the image compression setting
- C. Increase the gain setting in the camera
- D. Decrease the gain setting in the camera
- E. Decrease image compression setting

Answer: A,E

#### NEW QUESTION # 225

A camera's recording stream has a bitrate of 8 Mbit/s. How much storage is used per hour?

- A. 288 GB
- B. 28.8 GB
- C. 36 GB
- D. 3.6 GB

Answer: D

Explanation:

To calculate the storage used per hour by a camera's recording stream with a bitrate of 8 Mbit/s, you can use the following formula:

$$\text{Storage (GB/hour)} = \frac{\text{bitrate (Mbit/s)} \times \text{seconds per hour}}{8 \times 1024}$$
$$\text{Storage (GB/hour)} = \frac{8 \times 3600}{8 \times 1024} = 3.6 \text{ GB}$$

Since there are 3600 seconds in an hour:

$$\text{Storage (GB/hour)} = \frac{8 \times 3600}{8 \times 1024} = 3.6 \text{ GB}$$

Thus, the camera uses 3.6 GB of storage per hour. Axis documentation on storage requirements for video streams provides similar calculations to estimate storage needs based on bitrate.

#### NEW QUESTION # 226

When using an external IR illuminator, what can happen if the beam angle is significantly narrower than the field of view?

- A. Heat can distort the image
- B. The exposure may be uneven

- C. The backlight can increase
- D. Focus must be set manually

**Answer: B**

Explanation:

When using an external IR illuminator with a beam angle significantly narrower than the field of view, the exposure may be uneven. This can result in parts of the image being overexposed (too bright) while other parts remain underexposed (too dark). Ensuring that the beam angle of the IR illuminator matches the field of view of the camera is essential for achieving uniform illumination across the entire surveillance area. References:

Axis Communications IR Illumination Guide

#### NEW QUESTION # 227

What source emits the most illumination?

- A. - 10 W, 4000 lumens
- B. 15 W, 2000 lumens
- C. 5 W, 1000 lumens
- D. 20 W, 3000 lumens

**Answer: A**

Explanation:

Illumination is measured in lumens, which indicate the total amount of visible light emitted by a source. A light source with 10 watts and 4000 lumens emits more illumination than other options with lower lumens.

Lumens are a direct measure of light output, so a higher lumen value corresponds to greater illumination. Axis product guides and technical references on lighting confirm that 4000 lumens provide the highest illumination among the given options.

#### NEW QUESTION # 228

Which statement is true for broadcast network traffic?

- A. Broadcast is a method for sending video to many recipients over the internet even though their bandwidths vary
- B. Broadcast data packet length is longer than normal Ethernet packets, to accommodate a full video frame
- C. Broadcast is not practical for network video transmission, since packets are transmitted to every device on the network
- D. Broadcast is designed to enable optimized video transmission, since it tolerates network dropouts

**Answer: C**

Explanation:

Broadcast network traffic involves sending data packets to all devices on a network segment, regardless of whether they need the data. This method can lead to unnecessary network congestion and is not efficient for video transmission, which typically requires sending data to specific recipients. Broadcast is generally avoided in network video transmission in favor of more efficient methods like Unicast or Multicast. [Reference: Axis Communications - Network Traffic Management]

#### NEW QUESTION # 229

.....

Under the help of our ANVE exam questions, the pass rate among our customers has reached as high as 98% to 100%. We are look forward to become your learning partner in the near future. As we all know, to make something right, the most important thing is that you have to find the right tool. Our ANVE study quiz is the exact study tool to help you pass the ANVE exam by your first attempt.
