## Fortinet FCP - FortiManager 7.4 Administrator Sample Questions (Q12-Q17):

### NEW QUESTION # 12

An administrator created a new global policy package that includes header and footer policies and then assigned it to an ADOM. What are two outcomes of this action? (Choose two.)

- A. You must manually move the header and footer policies after the policy assignment.
- B. To assign another global policy package later to the same ADOM, you must unassign this policy first.
- C. After you assign the global policy package to an ADOM, the impacted policy packages become hidden in that ADOM.
- D. You can edit or delete all the global objects in the global ADOM.

**Answer: B,D**

Explanation:

\* Option A: To assign another global policy package later to the same ADOM, you must unassign this policy first. This is correct. FortiManager does not allow multiple global policy packages to be assigned to a single ADOM simultaneously. If you want to assign a different global policy package, the existing one must be unassigned first.

\* Option C: You can edit or delete all the global objects in the global ADOM. This is correct. Once a global policy package is assigned, you have the flexibility to edit or delete global objects in the global ADOM, affecting all ADOMs to which this package is assigned.

Explanation of Incorrect Options:

\* Option B: After you assign the global policy package to an ADOM, the impacted policy packages become hidden in that ADOM. This is incorrect because the policy packages do not become hidden; they are modified according to the global policies.

\* Option D: You must manually move the header and footer policies after the policy assignment. This is incorrect because header and footer policies are automatically applied when assigned.

\* See the "Global Policy and ADOM Management" section in the FortiManager Administration Guide.

Answer: A

## NEW QUESTION # 15

In the event that one of the secondary FortiManager devices fails, which action must be performed to return the FortiManager HA manual mode to a working state?

- A. Reboot the failed device to remove its IP from the primary device.
- B. The FortiManager HA state transition is transparent to administrators and does not require any reconfiguration.
- C. **Reconfigure the primary device to remove the peer IP of the failed device.**
- D. Manually promote one of the working secondary devices to the primary role, and reboot the old primary device to remove the peer IP of the failed device.

**Answer: C**

## NEW QUESTION # 16

An administrator runs the reload failure command `diagnose test deploymanager reloadconf <deviceid>` on FortiManager. What does this command do?

- A. It downloads the latest configuration from the specified FortiGate and performs a reload operation on the device database.
- B. It reloads the policy package from the FortiManager to FortiGate.
- C. It compares and provides differences in configuration on FortiManager with the current running configuration of the specified FortiGate.
- D. It installs the latest configuration on the specified FortiGate and updates the revision history database.

Answer: A

### Explanation:

This command is used to retrieve the current running configuration from the specified FortiGate device and updates the FortiManager's device database accordingly.
