The whole world of ISA-IEC-62443 preparation materials has changed so fast in the recent years because of the development of internet technology. We have benefited a lot from those changes. In order to keep pace with the development of the society, we also need to widen our knowledge. If you are a diligent person, we strongly advise you to try our ISA-IEC-62443 real test. You will be attracted greatly by our ISA-IEC-62443 practice engine. .

Great concentrative progress has been made by our company, who aims at further cooperation with our candidates in the way of using our ISA-IEC-62443 exam engine as their study tool. Owing to the devotion of our professional research team and responsible working staff, our ISA-IEC-62443 Training Materials have received wide recognition and now, with more people joining in the ISA-IEC-62443 exam army, we has become the top-raking ISA-IEC-62443 learning guide provider in the international market.

Exam ISA-IEC-62443 Duration, ISA-IEC-62443 Verified Answers

After so many years' development, our ISA Cybersecurity exam torrent is absolutely the most excellent than other competitors, the content of it is more complete, the language of it is more simply. Believing in our ISA-IEC-62443 guide tests will help you get the certificate and embrace a bright future. Time and tide wait for no man. Come to buy our test engine. PassLeader have most professional team to compiled and revise ISA-IEC-62443 Exam Question. In order to try our best to help you pass the exam and

get a better condition of your life and your work, our team worked day and night to complete it. Moreover, only need to spend 20-30 is it enough for you to grasp whole content of our practice materials that you can pass the exam easily, this is simply unimaginable.

ISA/IEC 62443 Cybersecurity Fundamentals Specialist Sample Questions (Q130-Q135):

NEW QUESTION # 130

What are the two sublayers of Layer 2?

Available Choices (select all choices that are correct)

- A. HIDS and NIDS
- B. LLC and MAC
- C. VLAN and VPN
- D. OPC and DCOM

Answer: B

Explanation:

Layer 2 of the OSI model is the data link layer, which is responsible for transferring data frames between nodes on a network segment. The data link layer is divided into two sublayers: logical link control (LLC) and media access control (MAC). The LLC sublayer deals with issues common to both dedicated and broadcast links, such as framing, flow control, and error control. The MAC sublayer deals with issues specific to broadcast links, such as how to access the shared medium and avoid collisions. The LLC and MAC sublayers are not related to the ISA/IEC 62443 cybersecurity standards, which focus on the security of industrial automation and control systems (IACS). NEW QUESTION # 131

Which statement BEST describes the Target Security Protection Ratings?

- A. They define the levels of security requirements fulfilled through implementation measures.
- B. They outline the desired levels of system security requirements to be fulfilled during operation.
- C. They measure the cost-effectiveness of security investments or implementation measures.
- D. They represent the actual security levels achieved at a time during operation.

Answer: B

Explanation:

Target Security Levels (SL-T) or Target Security Protection Ratings are defined as the desired security levels that must be achieved for a specific zone or conduit, based on risk assessment and business requirements.

"The Target Security Level (SL-T) represents the desired level of protection against threats for a zone or conduit, to be fulfilled through appropriate security measures."

- ISA/IEC 62443-3-2:2020, Clause 6.5.2 - Target SL Vector Determination They are not the actual achieved level (SL-A), nor are they a measure of cost-effectiveness. SL-Ts guide system designers and implementers in selecting appropriate security controls.

NEW QUESTION # 132

In an IACS system, a typical security conduit consists of which of the following assets?

- A. Controllers, sensors, transmitters, and final control elements
- B. Ferrous, thickwall, and threaded conduit including raceways
- C. Wiring, routers, switches, and network management devices
- D. Power lines, cabinet enclosures, and protective grounds

Answer: C

Explanation:

In ISA/IEC 62443, a conduit is a logical or physical communication path used to connect security zones and is typically composed

of:

Routers and switches

Network cabling (wiring)

Firewalls and network management devices

"A conduit is used to implement the flow of data between zones, and includes the communication hardware and associated logical controls such as firewalls, switches, and routers."

- ISA/IEC 62443-1-1:2007, Clause 3.3.44 - Conduit

This differs from physical electrical conduits, which are not a cybersecurity concept.

NEW QUESTION # 133

What does Layer 1 of the ISO/OSI protocol stack provide?

Available Choices (select all choices that are correct)

- **A. The electrical and physical specifications of the data connection**
- B. User applications specific to network applications such as reading data registers in a PLC
- C. Data encryption, routing, and end-to-end connectivity
- D. Framing, converting electrical signals to data, and error checking

Answer: A

Explanation:

Layer 1 of the ISO/OSI protocol stack is the physical layer, which provides the means of transmitting and receiving raw data bits over a physical medium. It defines the electrical and physical specifications of the data connection, such as the voltage levels, signal timing, cable types, connectors, and pin assignments. It does not perform any data encryption, routing, end-to-end connectivity, framing, error checking, or user applications. These functions are performed by higher layers of the protocol stack, such as the data link layer, the network layer, the transport layer, and the application layer. NEW QUESTION # 134

How many maturity levels (ML) are established for evaluation criteria according to ISA/IEC 62443-2-4?

- A. 0
- B. 1
- C. 2
- **D. 3**

Answer: D

Explanation:

ISA/IEC 62443-2-4 defines four Maturity Levels (ML1 to ML4) for evaluating the processes and practices of service providers (such as integrators and maintenance organizations). These maturity levels assess the consistency, documentation, and effectiveness of processes, ranging from "Initial" (ML1) to "Improving" (ML4).
