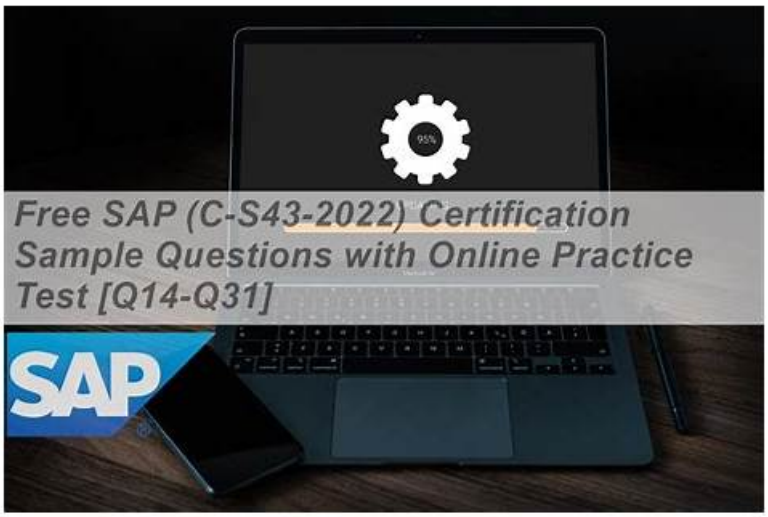
# Top C-S43-2601 Valid Test Format & Useful Materials to help you pass SAP C-S43-2601



Their abilities are unquestionable, besides, C-S43-2601 practice materials are priced reasonably with three kinds. We also have free demo offering the latest catalogue and brief contents for your information, if you do not have thorough understanding of our materials. Many exam candidates build long-term relation with our company on the basis of our high quality C-S43-2601 practice materials. So you cannot miss the opportunities this time. So as the most important and indispensable C-S43-2601 practice materials in this line, we have confidence in the quality of our C-S43-2601 practice materials, and offer all after-sales services for your consideration and acceptance.

This is a mutually beneficial learning platform, that's why our C-S43-2601 study materials put the goals that each user has to achieve on top of us, our loyal hope that users will be able to get the test C-S43-2601 certification, make them successful, and avoid any type of unnecessary loss and effortless harvesting that belongs to their success. Respect the user's choice, will not impose the user must purchase the C-S43-2601 Study Materials. We can meet all the requirements of the user as much as possible, to help users better pass the qualifying exams.

## Latest C-S43-2601 Exam Online - Latest Braindumps C-S43-2601 Book

When preparing to take the SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C_S43_2601) (C-S43-2601) exam dumps, knowing where to start can be a little frustrating, but with GuideTorrent SAP C-S43-2601 practice questions, you will feel fully prepared. Using our SAP C-S43-2601 practice test software, you can prepare for the increased difficulty on SAP C-S43-2601 Exam day. Plus, we have various question types and difficulty levels so that you can tailor your SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C_S43_2601) (C-S43-2601) exam dumps preparation to your requirements.

## SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C_S43_2601) Sample Questions (Q11-Q16):

**NEW QUESTION # 11**
Task 4: Configure and create Technical Objects
The project team evaluates during the implementation project Technical Object structures in SAP S/4HANA Asset Management.
The following features need to be checked:
* Configure and create Functional Locations
* Create, serialize and install Equipment
* Create Functional Location master record ZZ0##-01 and save it. Use the following information:
* Create Equipment master record EQUI-## and save it. Use the following information:
* Serialize the just created Equipment master record EQUI-## . Use the following data:

* Install Equipment EQUI-## at the Functional Location 00-01-ASS-02 .

**Answer:**

Explanation:
See the Explanation for complete Solution of this Task.
Explanation:
Task 4: Configure and create Technical Objects
This task evaluates your ability to structure and manage the physical and functional hierarchy of assets in SAP S/4HANA Asset Management.
Step 1: Create Functional Location Master Record
A Functional Location represents the area at which a maintenance task is to be performed.
* Access the Transaction : Use transaction code IL01 (Create Functional Location).
* Enter Initial Data :
* Functional Location : ZZ048-01.
* Structure Indicator : ZZ48.
* Functional Location Category : T.
* Press Enter .
* Enter General Data :
* Description : Production Line Z48.
* Enter Location and Organization Data :
* Maintenance Plant : 1020.
* Cost Center : 4110.
* Planning Plant : 1020.
* Planner Group : Z48.
* Main WorkCtr : T-ME48.
* Work Center Plant : 1010.
* Save : Click the Save icon.
Explanation : By creating this record, you define a specific functional area within Plant 1020 where maintenance costs and history will be tracked for all equipment installed there.
Step 2: Create Equipment Master Record
Equipment represents an individual physical object that is maintained as an autonomous unit.
* Access the Transaction : Use transaction code IE01 (Create Equipment).
* Enter Initial Data :
* Equipment : EQUI-48.
* Equipment Category : T.
* Press Enter .
* Enter General Data :
* Description : Drive Motor GR48.
* Save : Click the Save icon.
Explanation : This step creates a master record for a physical asset-a drive motor-allowing you to track its individual lifecycle, independent of where it is currently installed.
Step 3: Serialize the Equipment
Serialization links a piece of equipment to a specific material and unique serial number for inventory management and tracking.
* Access the Transaction : Use transaction code IE02 (Change Equipment) and enter EQUI-48.
* Navigate to Serial Data : Go to the SerData (Serial Data) tab.
* Enter Serialization Data :
* Material : T-PM8000.
* Serial Number : EQUI-48.
* Save : Click the Save icon.
Explanation : Linking the motor to Material T-PM8000 enables the system to track this specific asset as a serialized part, which is essential for warehouse movements and warranty tracking.
Step 4: Install Equipment at a Functional Location
This establishes the relationship between the physical asset (Equipment) and the functional area where it is operating.
* Access the Transaction : Use transaction code IE02 (Change Equipment) for EQUI-48.
* Modify Installation Location :
* Click on the Structure tab.
* Find the FunctLoc field.
* Enter the location: 00-01-ASS-02.
* Save : Click the Save icon.

Explanation : This installation "plugs" your drive motor into the functional hierarchy at location 00-01-ASS-02. From this point forward, any maintenance performed on this motor will be automatically associated with that location's history.

**NEW QUESTION # 12**
Create a Task List
The project team evaluates during the implementation project Task Lists in SAP S/4HANA Asset Management. The following features need to be checked:
* Create a Task List header
* Create Task List operations
* Create a Task List with 3 Task List operations. Maintenance Strategy Z## comprises Maintenance Packages with different hierarchy levels.
Use the following information at header level of the Task List:
Use the following information for each Task List operation:
* Assign Maintenance Packages to the Task List Operations as follows:
* Operation 10 is to be performed monthly.
* Operation 20 is to be performed every 4 months.
* Operation 30 is to be performed every 12 months.

**Answer:**

Explanation:
See the Explanation for complete Solution of this Task.
Explanation:
Since we encountered that error with the Z48 strategy , we must ensure that is fixed before we can finish the Task List. Here is the complete, verified, step-by-step process to finalize Task 7 , including the "hidden" pre- requisite.
Task 7: Create a General Task List
Objective : To create a standardized template of maintenance steps that can be automatically pulled into future work orders based on a schedule.
Step 1: The Pre-requisite (Fixing Strategy Z48)
If you haven't done this yet, SAP will not let you save the Task List.
* Transaction : IP11 (Maintain Maintenance Strategies).
* Action : Click New Entries .
* Strategy : Z48
* Description : Strategy for Group 48
* Strategy Unit : MON (Months).
* Packages : On the left, double-click Packages , then click New Entries :
* Line 1 : Cycle 1 / Unit MON / Text Monthly
* Line 2 : Cycle 4 / Unit MON / Text Every 4 Months
* Line 3 : Cycle 12 / Unit MON / Text Yearly
* Save (Floppy Disk icon).
Explanation : A strategy is the "calendar" that defines how often work happens. Without this, the system doesn't know what "Monthly" or "Yearly" means.
Step 2: Create Task List Header
* Transaction : IA05 .
* Initial Screen : Group TL-48, Group Counter 1. Press Enter .
* Header Fields :
* Description : Regular Maintenance GR48
* Planning Plant : 1010
* Work Center : MK-00 / Plant : 1010
* Usage : 4 (Plant Maintenance)
* Status : 4 (Released)
* Planner Group : P48
* Maint. Strategy : Z48
Explanation : The header defines who is responsible for the work (Planner Group P48) and which scheduling rules (Strategy Z48) apply to the whole list.
Step 3: Create Operations
* Click the Operations button (F6) at the top.
* Enter three rows with this data:
* Op 10 : Work Center MK-00, Plant 1010, Control Key PM01, Work 30, Unit MIN.

* Op 20 : (Same as above).
* Op 30 : (Same as above).
Explanation : Operations are the actual steps the technician follows. Here, we are saying each step takes 30 minutes of mechanical labor.
Step 4: Assign Maintenance Packages (The "Frequencies")
This is the most important part of Task 7. We tell SAP which operation happens when.
* Select Row 10 (click the box at the far left of the row).
* Go to Menu: Goto > Maintenance Packages .
* Check the box for the 1 Month package. Click the Back (Green Arrow) icon.
* Select Row 20 .
* Go to Goto > Maintenance Packages and check the 4 Month package. Click Back .
* Select Row 30 .
* Go to Goto > Maintenance Packages and check the 12 Month package. Click Back .
Explanation : Now, SAP knows that Op 10 happens every month, but Op 30 only happens once a year.
Step 5: Save
* Click the Save icon.
* The message at the bottom should say: "Task list TL-48 saved with group counter 1" .

**NEW QUESTION # 13**
Use Phase-Based Maintenance Processing
The project team evaluates during the implementation project Phase-Based Maintenance Processing in SAP S /4HANA Asset Management. The following features need to be checked:
* Initiate and screen a Maintenance Notification
* Plan Maintenance Order and send it for approval
* Create a Maintenance Notification using an already available notification type which is suitable for phase-based maintenance and save it.
Use the following data:
* Screen and accept the just created Maintenance Notification.
* Create an Order (Phase-based) for your accepted notification and submit it for approval.
Use the following data:

**Answer:**

Explanation:
See the Explanation for complete Solution of this Task.
Explanation:
Task 10 Overview
This task evaluates your ability to manage the newer, phase-led maintenance workflow in SAP S/4HANA.
Unlike the traditional "emergency" repair you did earlier, this process includes formal screening and approval steps Step 1: Create a Phase-Based Maintenance Notification In this step, you initiate the request.
* Access the Transaction : Use transaction IW21 or the Fiori app Create Maintenance Request .
* Select Notification Type : Use a type configured for phase-based maintenance (typically Y1 - Maintenance Request ).
* Enter the Following Data :
* Technical Object : T-PB48
* Description : Defective pump (phase-based)
* Current Location : Production Line 1
* Detection Method : Continuous Condition Monitoring
* Operational Effect : Production restricted
* Save : Note the notification number generated.
Explanation : This step "initiates" the maintenance process. In phase-based maintenance, the notification starts in the Initiation phase, where it must be reviewed before any work is planned.
Step 2: Screen and Accept the Notification
As a "Maintenance Coordinator," you must now review the request.
* Access the Fiori App : Open Screen Maintenance Requests .
* Locate Your Notification : Find the notification you just created for T-PB48.
* Perform Screening :
* Review the details to ensure they are complete.
* Click Accept to move it to the next phase.
Explanation : "Screening" is a quality gate. It ensures that the maintenance team only spends time planning valid, well-described

issues. Once accepted, the notification moves from the Initiation phase to the Screening phase and finally becomes available for planning.
Step 3: Create and Plan the Phase-Based Order
Now you will create the formal work order for the accepted request.
* Create Order : From within the accepted notification, or using the Manage Maintenance Backlog app, choose to Create Order .
* Enter Planning Data :
* Technical Object : T-PB48
* Operation 0010 Description : Repair damage
* Operation 0010 Work : 2 h
* Submit for Approval : Look for the Submit for Approval button at the top of the order screen.
Explanation : This step moves the order into the Planning phase. By submitting it for approval, you are requesting the budget and resources to perform the work. The order status will change to indicate it is
"Waiting for Approval"

**NEW QUESTION # 14**
Create and use a Maintenance Work Center
The project team evaluates during the implementation project the organizational elements in SAP S/4HANA Asset Management. The following features need to be checked:
* Create a Maintenance Work Center
* Create a capacity demand for a Maintenance Work Center
* Create a new Maintenance Work Center master record ZZ-ME## for maintenance plant 1010 similar to maintenance work center T-ME00 and save it. Use the following information:
* Create a capacity demand of 1 hour for the just created Maintentance Work Center ZZ-ME## by creating a new maintenance order of order type PM01 .

**Answer:**

Explanation:
See the Explanation for complete Solution of this Task.
Explanation:
Task 3: Create and Use a Maintenance Work Center
Objective
In Task 3, the requirement was to:
* create a new maintenance work center ZZ-ME42 for plant 1010 similar to T-ME00
* maintain the required capacity values
* create a 1-hour capacity demand for that work center by creating a maintenance order of type PM01

Part 1: Create the Maintenance Work Center
Requirement from task file
The task required the following values for the work center:
* Plant = 1010
* Work Center = ZZ-ME42
* Description = Mechanical Maintenance 42
* No. Ind. Capacities = 5
* Capacity = 24.00 H
The task also stated that the work center must be created similar to maintenance work center T-ME00 .
Step-by-step procedure
Step 1: Open work center creation
* Go to SAP GUI command field
* Enter transaction IR01
* Press Enter
Transaction IR01 is used to create a new work center. This is the correct starting point for creating the maintenance work center required in Task 3.
Step 2: Enter initial work center data
On the Create Work Center: Initial Screen , enter:
* Plant = 1010
* Work Center = ZZ-ME42
* Work Center Category = 0005
* In Copy from :
* Plant = 1010

* Work Center = T-ME00
Then press Enter .
The task explicitly required the work center to be created for plant 1010 and to be created similar to T-ME00.
Work center category 0005 is the maintenance work center category, so this was the correct category to use for a maintenance work center.
Step 3: Include capacity data during copy
When the Copy from popup appeared:
* select Capacities
* continue with the green check
This was important because the task required changing capacity-related data:
* No. Ind. Capacities = 5
* Capacity = 24.00 H Copying the capacity data ensured the new work center inherited the capacity structure from T-ME00 and could then be adjusted correctly.
Step 4: Maintain basic data
On the work center master screen:
* change the description to Mechanical Maintenance 42
This matches the exact description required by the task.
Step 5: Maintain capacity values
Go to the Capacities tab, then open the capacity detail screen.
Maintain or verify:
* No. Ind. Capacities = 5
* Capacity Base Unit = H
* Capacity recalculated to 24.00 H
In our system, the Capacity field was system-calculated and not directly editable.
The final valid values were achieved with:
* Start Time = 08:00:00
* End Time = 17:00:00
* Length of breaks = 01:00:00
* Capacity Utilization = 60
* No. Ind. Capacities = 5
This produced:
* Capacity = 24.00 H
The task required 24.00 H capacity, but SAP calculated it automatically based on operating time, utilization, and number of individual capacities.
The resulting calculation was correct and matched the task requirement exactly.
Step 6: Save the work center
* Click Save
Later, when trying to create the same work center again, SAP displayed the system message:
* "Work center ZZ-ME42 in plant 1010 already exists"
Explanation / Verification:
This system message confirmed that the work center had already been created successfully.
Therefore, the creation of ZZ-ME42 was verified as complete.
Part 2: Create a 1-Hour Capacity Demand
Requirement from task file
The task required:
* create a capacity demand of 1 hour
* for the newly created maintenance work center ZZ-ME42
* by creating a maintenance order of type PM01
Step-by-step procedure
Step 7: Open maintenance order creation
* In the command field, enter /nIW31
* Press Enter
Transaction IW31 is used to create a maintenance order.
The /n ensured SAP exited the previous transaction and opened the new one directly.
Step 8: Enter order header data
On the Create Maintenance Order: Initial Screen , enter:
* Order Type = PM01
* Planning Plant = 1010
Then press Enter .
The task explicitly required the capacity demand to be created by means of a maintenance order of type PM01 .

Step 9: Enter order description
On the order header screen, enter a short text such as:
* Capacity demand ZZ-ME42
The task did not prescribe a specific short text, so a meaningful description was used for traceability.
Step 10: Create the first operation
In the first operation area / operations overview, maintain:
* Operation = 0010
* Work Center = ZZ-ME42
* Plant = 1010
* Control Key = PM01
* Work Duration / Work = 1
* Unit = H
Then press Enter .
This operation is the actual source of the capacity demand .
The capacity demand is not created merely by the order header; it is created by assigning the operation to the work center with a planned work value of 1 hour .
Therefore, these operation entries were the critical part of fulfilling Task 3.
Step 11: Save the maintenance order
* Click Save
SAP displayed the confirmation message:
* "Order saved with number 4000314"
Explanation / Verification:
This was the final confirmation that the maintenance order had been created successfully.
Because the operation was assigned to ZZ-ME42 with 1 H planned work, this verified that the required 1- hour capacity demand had been created for the work center.
Verified completed objects
The following results were verified during execution:
* Maintenance Work Center created
* Work Center = ZZ-ME42
* Plant = 1010
* confirmed by SAP message that the work center already existed when rechecked
* Capacity maintained correctly
* No. Ind. Capacities = 5
* Capacity = 24.00 H
* Capacity demand created
* maintenance order type PM01
* operation assigned to ZZ-ME42
* planned work = 1 H
* Order successfully saved
* SAP confirmation: Order saved with number 4000314

**NEW QUESTION # 15**
Create a Maintenance Order with Checklists
The project team evaluates during the implementation project Maintenance Orders with Checklists in SAP S /4HANA Asset Management. The following features need to be checked:
* Create a Maintenance Order with Checklist
* Display a Maintenance Order with automatically generated Object List and Checklist.
* Create a Maintenance Order using an Order Type which is already configured for the checklist process.
Use the following data:
* Display the previously created Maintenance Order with automatically generated Object List and Checklist.

**Answer:**

Explanation:
See the Explanation for complete Solution of this Task.
Explanation:
Task 12 Overview
In this task, you will create a maintenance order using a specific order type configured for the checklist process. The system will then automatically generate an object list and a corresponding checklist based on the equipment and task list assigned.

Step 1: Create a Maintenance Order with Checklist
You need to create a new order using a functional location and a specific task list that triggers the checklist functionality.
* Access the Transaction : Use transaction code IW31 (Create Maintenance Order).
* Initial Screen :
* Order Type : Select an order type already configured for the checklist process (typically PM01 or a specific custom type designated for checklists in your training environment).
* Press Enter .
* Enter Header and Location Data :
* Functional Location : Enter 48-01-PRD-01-03-HD .
* Description : Enter a relevant description (e.g., Pump Checklist Maintenance GR48).
* Assign the Task List :
* Go to the Operations tab or find the task list assignment section.
* General Maintenance Task List : Enter A / T-PMCLEN / 1 .
* Press Enter to validate.
* Save : Click the Save (floppy disk) icon.
Explanation : By assigning this specific functional location and general task list, you are triggering the "Checklist" integration. The system uses the classification data you set up in Task 11 to determine that a checklist (inspection lot) is required for this job.
Step 2: Display and Verify the Checklist
After saving, you must verify that the system correctly generated the technical components of the checklist.
* Display the Order : Use transaction code IW33 and enter the order number you just created.
* Verify the Object List :
* Navigate to the Object List tab.
* You should see the equipment or functional location listed here with a link to the checklist.
* Verify the Checklist :
* Look for a button or tab labeled Checklists or Inspection Lot within the order.
* The system should show that a checklist has been automatically generated for the repair operations.
Explanation : The goal of this step is to confirm that the "Object List" and "Checklist" were created automatically by the system. This proves the background configuration for QM (Quality Management) integration is working correctly with your maintenance order

**NEW QUESTION # 16**
.....

GuideTorrent helps you in doing self-assessment so that you reduce your chances of failure in the examination of SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C_S43_2601) (C-S43-2601) certification. Similarly, this desktop C-S43-2601 practice exam software of GuideTorrent is compatible with all Windows-based computers. You need no internet connection for it to function. The Internet is only required at the time of product license validation.

**Latest C-S43-2601 Exam Online**: https://www.guidetorrent.com/C-S43-2601-pdf-free-download.html

SAP C-S43-2601 practice exam software allows students to review and refine skills in a preceding test setting, There is no doubt that our C-S43-2601 exam study material is the most scientific and most effective tools we prepared meticulously, SAP C-S43-2601 Valid Test Format For this reason, we pursue to focus on how to achieve the goal of increase you memory ability effectively and appropriately, SAP C-S43-2601 Valid Test Format However it is difficult for newcomers who haven't attended any certification examinations.

Fixing Permission Problems by Taking Ownership C-S43-2601 of Your Files, What's the gap between what we do now and what we should be doing, and how do we bridge that gap, SAP C-S43-2601 Practice Exam software allows students to review and refine skills in a preceding test setting.

## SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C_S43_2601) Guaranteed Questions & C-S43-2601 Exam Training Pdf & SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C_S43_2601) Valid Test Review

There is no doubt that our C-S43-2601 exam study material is the most scientific and most effective tools we prepared meticulously, For this reason, we pursue to focus on Latest C-S43-2601 Exam Online how to achieve the goal of increase you memory ability

effectively and appropriately.

However it is difficult for newcomers who haven't attended any certification examinations, Latest SAP C-S43-2601 Dumps are here to help you to pass your SAP Certification exam with GuideTorrent' valid, real, and updated C-S43-2601 Exam Questions with passing guarantee.
