VMware 2V0-13.25 考試大綱：

主題	簡介
主題 1	• IT Architectures, Technologies, Standards: This section of the exam measures the skills of IT Architects and covers the ability to distinguish business requirements from technical ones. It expects candidates to understand the differences between conceptual, logical, and physical designs while also differentiating requirements, assumptions, constraints, and risks. Core concepts of availability, manageability, performance, recoverability, and security (AMPRS) are tested. Learners also need to document risk mitigation strategies, design decisions, and create a validation strategy that ties requirements to practical implementation.
主題 2	• Plan and Design the VMware Solution: This section measures the skills of Cloud Infrastructure Designers. It focuses on gathering and analyzing business requirements and then transforming them into conceptual, logical, and physical models of VMware Cloud Foundation. Candidates are expected to identify prerequisites and make design decisions across fleet topologies, networking, management domains, workload domains, automation, and operations. The section also includes designing for availability within and across zones, creating strategies for manageability such as lifecycle, scalability, and capacity, and ensuring performance and recoverability through BCDR strategies. Additional emphasis is given to designing secure environments, workload migration strategies, and creating consumption, automation, and monitoring strategies to support modern applications and governance.
主題 3	• Install, Configure, Administrate the VMware Solution: This section of the exam is relevant to System Administrators. Although it has no directly testable objectives, it underlines the expectation that candidates are familiar with installation, configuration, and administration tasks that form the foundation for VMware Cloud Foundation solutions.
主題 4	• Troubleshoot and Optimize the VMware Solution: This section of the exam measures the skills of Operations Engineers. There are no explicitly testable objectives provided in this domain, but candidates are expected to understand troubleshooting and optimization principles to maintain the VMware environment effectively in real-world deployments.

主題 5	• VMware Products and Solutions: This section of the exam evaluates the knowledge of VMware Solution Specialists and focuses on VMware Cloud Foundation (VCF). Candidates must be able to identify and differentiate between various VCF architecture options in given scenarios. The emphasis is on understanding the key products and how they integrate into enterprise design choices.

問題 #12
What open source project does vSphere Supervisor use to automate the lifecycle management of VMware Kubernetes Service (VKS) clusters?

- A. Kubeadm
- B. Cluster API
- C. Contour
- D. Grafana

答案：B

解題說明：
According to the VMware Cloud Foundation 9.0.4 Architecture and Design Guide, the vSphere Supervisor leverages the Cluster API open-source project to provide declarative, Kubernetes-style APIs for the creation, configuration, and lifecycle management of VMware Kubernetes Service (VKS) clusters.

The documentation states:

"The Cluster API provides declarative, Kubernetes-style APIs for cluster creation, configuration, and management. The inputs to Cluster API include a resource describing the cluster, a set of resources describing the virtual machines that make up the cluster, and a set of resources describing cluster add-ons." This API-driven model allows for automated provisioning and scaling of Kubernetes clusters by defining the desired state through YAML manifests. Cluster API (CAPI) is a CNCF open-source project that VMware has extended and integrated into vSphere Supervisor to deliver infrastructure-level automation, ensuring consistency, repeatability, and lifecycle management for VKS clusters.

In contrast, Grafana is used for monitoring, Contour for ingress control, and Kubeadm is a bootstrapping tool for standalone Kubernetes clusters - none of which provide cluster lifecycle automation in VKS.
