

4A0-D01 Examcollection Questions Answers & 4A0-D01 Free Test Questions

P.S. Free & New 4A0-D01 dumps are available on Google Drive shared by PracticeMaterial: <https://drive.google.com/open?id=1c4fbWVwnjqFZA5TZflfaSIOhZas3bp4R>

Of course, 4A0-D01 simulating exam are guaranteed to be comprehensive while also ensuring the focus. We believe you have used a lot of 4A0-D01 learning materials, so we are sure that you can feel the special features of 4A0-D01 training questions. The most efficient our 4A0-D01 Study Materials just want to help you pass the exam more smoothly. For our technicals are checking the changes of the questions and answers everyday to keep them the latest and valid ones.

Nokia 4A0-D01 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">This section of the exam measures skills of a Network Automation Specialist and introduces the principles of Event Driven Automation in SR Linux environments. It covers integration with Kubernetes and explores core use cases such as intent-based automation for fabrics and services, as well as enhanced network observability.
Topic 2	<ul style="list-style-type: none">SR Linux Logging, Monitoring, and Filtering: This section of the exam measures skills of a Data Center Network Engineer and addresses how to implement logging, monitoring, and traffic filtering in SR Linux. It explains log file usage, ACL types, CPM filtering, and packet capture filters. Configuration tasks involve applying ACLs and monitoring network activity using capture tools.

Topic 3	<ul style="list-style-type: none"> SR Linux Configuration and Routing: This section of the exam measures skills of a Network Automation Specialist and focuses on configuring and managing SR Linux systems. It examines the YANG-driven CLI, JSON output, environment variables, and static and dynamic routing. Learners also explore BGP, ECMP, IP-VRF, MAC-VRF, and the use of VXLAN with EVPN to implement both Layer 2 and Layer 3 overlays, including symmetric and asymmetric models.
Topic 4	<ul style="list-style-type: none"> Module 5 – EDA (Event Driven Automation) Introduction
Topic 5	<ul style="list-style-type: none"> SR Linux User and System Management: This section of the exam measures skills of a Network Automation Specialist and includes managing user roles, TLS configurations for secure communication, and automation features like Zero-Touch Provisioning (ZTP). It covers ZTP setup, configuration processes, and common issues that may arise during deployment.

4A0-D01 Free Test Questions & 4A0-D01 Practice Test Pdf

The candidates all enjoy learning on our 4A0-D01 practice exam study materials. Also, we have picked out the most important knowledge for you to learn. The difficult questions of the 4A0-D01 study materials have detailed explanations such as charts, illustrations and so on. We have invested a lot of efforts to develop the 4A0-D01 Training Questions. Please trust us. You absolutely can understand them after careful learning.

Nokia Data Center Fabric Fundamentals Exam Sample Questions (Q17-Q22):

NEW QUESTION # 17

Which of the following is NOT how prefixes are typically learned and advertised in a leaf and spine data center?

- A. Each leaf router learns the prefixes of remote servers from other leaf routers directly using eBGP.
- B. Spine routers advertise learned prefixes to leaf routers directly using eBGP.
- C. Spine routers learn prefixes from leaf routers directly using eBGP.
- D. Each leaf router advertises the prefixes of its own locally connected servers.

Answer: A

Explanation:

Leaf routers do not learn prefixes from other leaf routers directly using eBGP; instead, leaf routers learn remote prefixes via spine routers. The spine acts as the route reflector or intermediary between leaf routers.

NEW QUESTION # 18

Which of the following is NOT a valid logging source used in Nokia's SR Linux?

- A. Linux facility + priority
- B. SR Linux subsystem + priority
- C. Syslog filter
- D. Console

Answer: C

Explanation:

"Syslog filter" is not a logging source; it is a mechanism used to filter log messages. Valid logging sources in SR Linux include Linux facility + priority, console, and SR Linux subsystem + priority.

NEW QUESTION # 19

Which of the following is NOT part of Day 2+ operations with Nokia's Fabric Services System?

- A. Use the digital sandbox to test and validate configuration changes and upgrades.
- B. Monitor the data center fabric using model-driven telemetry.
- C. Analyze the overall health of the data center fabric for proactive operations.
- D. Use a fabric intent to build and validate design templates.

Answer: D

Explanation:

Using a fabric intent to build and validate design templates is primarily a Day 0 or Day 1 activity focused on initial fabric deployment and design, not part of Day 2+ operational tasks like monitoring, health analysis, or change validation.

NEW QUESTION # 20

Based on the exhibit output, which of the following is NOT the reason the user runs the "baseline diff" command?

- A. User admin is not able to commit their changes.
- B. User admin wants to check if there are differences between the current running config and their baseline datastore.
- C. Another user has committed changes.
- D. User admin notices that "!" appears in the CLI prompt.

Answer: A

Explanation:

The "baseline diff" command is used to compare the candidate configuration against the baseline datastore to see changes or conflicts, especially when multiple users are involved or to verify differences. It does not indicate that the user is unable to commit changes.

NEW QUESTION # 21

Which of the following is NOT one of the reasons why BGP is used as the routing protocol in the data center?

- A. It supports both IPv4 and IPv6.
- B. It is more efficient than link-state protocols like IS-IS and OSPF.
- C. BGP neighbors automatically discover each other.
- D. It is a well understood and mature routing protocol.

Answer: B

Explanation:

BGP is not chosen because it is more efficient than link-state protocols; in fact, link-state protocols like IS-IS and OSPF generally provide faster convergence and more efficient route calculation. BGP is used in data centers mainly because it is mature, well understood, supports both IPv4 and IPv6, and offers flexible policy control.

NEW QUESTION # 22

.....

At any point in the process of buying our 4A0-D01 exam braindumps, the customer does not need to check the status of the purchase order, because as long as you have paid for it, then you can get it in a second. With all those efficiency, our 4A0-D01 study engine is suitable in this high-speed society. With strong strength in this career, we can claim that you can only study our 4A0-D01 learning guide for 20 to 30 hours, you can pass your 4A0-D01 exam with 100% guarantee.
