If you want to walk into the test center with confidence, you should prepare well for CWNA-109 certification. While, where to get the accurate and valid CWNP study pdf is another question puzzling you. Now, CWNA-109 sure pass exam will help you step ahead in the real exam and assist you get your CWNA-109 Certification easily. Our CWNA-109 test questions answers will provide the best valid and accurate knowledge for you and give you right reference. You will successfully pass your actual test with the help of our high quality and high hit-rate CWNA-109 study torrent.

we will provide you with the best CWNP CWNA-109 exam dumps. You can pass the CWNP CWNA-109 exam with high marks with the help of the CWNP CWNA-109 exam questions. These CWNP CWNA-109 exam practice questions are designed and verified by experienced and qualified CWNA-109 Exam Preparation trainers. They work together and put all their expertise and knowledge while verifying CWNA-109 exam questions all the time.

CWNA-109 Exam Questions | Exam CWNA-109 Study Solutions

CWNP CWNA-109 exam dumps certification will not only improve the quality of your resume, but it can open the door to new

opportunities for employment. It is compulsory to prepare with reliable and valid CWNA-109 dumps that ensures 100% success on the very first attempt. There is nothing more valuable than being awarded the CWNP Wireless Network Administrator (CWNA) Certification Exam that can allow you to earn an impressive position in the industry of CWNP. We hope you will be able to enjoy a positive experience making preparations with our latest and valid CWNA-109 Exam Questions And Answers.

CWNP CWNA-109 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> WLAN Protocols and Devices: It focuses on terminology related to the 802.11 MAC and PHY, the purpose of the three main 802.11 frame types, MAC frame format, and 802.11 channel access methods.
Topic 2	<ul style="list-style-type: none"> WLAN Network Architecture and Design Concepts: This topic deals with describing and implementing Power over Ethernet (PoE). Furthermore, the topic covers different wireless LAN architectures, coverage requirements, roaming considerations, and common proprietary features in wireless networks.
Topic 3	<ul style="list-style-type: none"> Radio Frequency (RF) Technologies: This topic explains the basic features and behavior of RF. It also discusses applying the basic concepts of RF mathematics and measurement. Lastly, the topic covers RF signal characteristics and the functionality of RF antennas.
Topic 4	<ul style="list-style-type: none"> RF Validation and WLAN remediation: This topic covers RF interference, WLAN performance, the basic features of validation tools, and common wireless issues.
Topic 5	<ul style="list-style-type: none"> WLAN Regulations and Standards: The topic discusses the roles of WLAN and networking industry organizations. It also addresses the concepts of various Physical Layer (PHY) solutions, spread spectrum technologies, and 802.11 WLAN functional concepts.

CWNP Wireless Network Administrator (CWNA) Sample Questions (Q23-Q28):

NEW QUESTION # 23

You are implementing a multi-AP WLAN and fast secure roaming is essential. Which one of the following methods is an IEEE 802.11 standard method for fast roaming?

- A. FT
- B. Band steering
- C. Load balancing
- D. OKC

Answer: A

Explanation:

FT (Fast Transition) is an IEEE 802.11 standard method for fast roaming. FT is defined in the IEEE 802.11r amendment and is also known as Fast BSS Transition (FBT) or Fast Secure Roaming. FT is a feature that allows a client station to quickly switch from one AP to another within the same ESS (Extended Service Set) without having to re-authenticate and re-associate with each AP. This reduces the latency and packet loss that may occur during roaming, thus improving the user experience and maintaining the security of the connection.

FT works by using pre-authentication and key caching mechanisms that allow the client station and the APs to exchange security information before the actual roaming occurs. This way, when the client station decides to roam to a new AP, it can use a fast reassociation request and response that contain only a few fields, instead of a full authentication and association exchange that require more time and data. References: 1, Chapter 9, page 367; 2, Section 6.3

NEW QUESTION # 24

An 802.11 WLAN transmitter that emits a 50 mW signal is connected to a cable with 3 dB of loss. The cable is connected to an antenna with 16 dBi of gain. What is the power level at the Intentional Radiator?

- A. 1000 mW
- B. 500 mW
- C. 25 mW
- D. 250 mW

Answer: A

NEW QUESTION # 25

What feature of 802.11ax (HE) may impact design decisions related to AP placement and the spacing between same-channel BSS cells (3SAs) because it is designed to reduce overlapping BSS contention?

- A. 6 GHz band support
- B. TWT
- C. BSS Color
- D. uplink MU-MIMO

Answer: C

Explanation:

In the 802.11ax (High Efficiency, HE) amendment, one of the key features introduced is BSS (Basic Service Set) Coloring. This feature is designed to mitigate issues arising from overlapping BSSs (OBSS), which can lead to contention and interference in dense wireless environments. BSS Coloring works by:

- * Assigning a "color" (a small number) to each BSS: This helps devices differentiate between frames from their own BSS and those from neighboring BSSs.
 - * Reducing Inter-BSS Interference: Devices can ignore frames from different BSSs (with a different "color") under certain conditions, reducing the impact of OBSS interference.
 - * Improving Spatial Reuse: By distinguishing between transmissions from different BSSs, devices can make more informed decisions about when to transmit, improving the efficiency of spatial reuse and reducing unnecessary contention.
- This feature directly impacts design decisions related to AP placement and the spacing between same-channel BSS cells, as it allows for closer placement of APs on the same channel without significantly increasing interference, thus improving overall network capacity and efficiency.

The other options, while features of 802.11ax, do not directly pertain to reducing overlapping BSS contention in the same manner:

- * TWT (Target Wake Time) optimizes device sleep schedules to conserve power.
- * Uplink MU-MIMO enhances uplink data transmission capabilities but doesn't specifically address OBSS contention.
- * 6 GHz Band Support introduces new spectrum for Wi-Fi use but is not a feature aimed at reducing OBSS contention within the 802.11ax framework.

Therefore, the correct answer is B, BSS Color.

CWNA Certified Wireless Network Administrator Official Study Guide: Exam CWNA-109, by David D.

Coleman and David A. Westcott.

NEW QUESTION # 26

A string of characters and digits is entered into an AP and a client STA for WPA2 security. The string is 8 characters long. What is this string called?

- A. Passphrase
- B. WEP key
- C. PSK
- D. MSK

Answer: A

Explanation:

The string of characters and digits that is entered into an AP and a client STA for WPA2 security and is 8 characters long is called a passphrase. A passphrase is a human-readable text that is used to generate a Pre-Shared Key (PSK) for WPA2-Personal security. A passphrase can be between 8 and 63 characters long and can include any ASCII character. The PSK is a 256-bit key that is derived from the passphrase using a hashing algorithm called PBKDF2. The PSK is used to encrypt and decrypt the data frames between the AP and the client STA. A MSK is a Master Session Key that is generated by an authentication server for WPA2-

Enterprise security. A WEP key is a 40-bit or 104-bit key that is used for Wired Equivalent Privacy (WEP) security, which is deprecated and insecure. A PSK is not a string of characters and digits, but a binary key. NEW QUESTION # 27

An IEEE 802.11 amendment is in the draft state. What impact does this draft amendment have on the 802.11 standard?

- A. Devices will be released based on the draft amendment and the draft amendment features are part of the standard.
- B. The standard is changed to reflect the new capabilities as soon as an amendment enters the draft stage.
- **C. No impact: Until an amendment is ratified, it does not become part of the standard.**
- D. No impact: Draft amendments do not become part of the standard until a working group is formed.

Answer: C

Explanation:

An IEEE 802.11 amendment is a proposed change or addition to the existing 802.11 standard, which defines the specifications and protocols for wireless LANs. An amendment goes through several stages of development, such as draft, sponsor ballot, and final approval, before it is ratified by the IEEE Standards Association and becomes part of the standard. Until then, it has no official impact on the standard, although some vendors may release products based on draft amendments to gain a competitive edge or to influence the final outcome of the amendment. NEW QUESTION # 28

.....

It is quite clear that time is precious for everybody and especially for those who are preparing for the CWNA-109 exam, thus our company has always kept the principle of saving time for our customers in mind. As you will see our operation system can automatically send our CWNA-109 practice test to the email address in 5 to 10 minutes after payment. And after purchasing our CWNA-109 Exam Questions, all you need to do is just check your email and begin to practice the questions in our CWNA-109 preparation materials. Your time is really precious so please don't waste it any more in hesitation.
