AB-900 test braindumps: Microsoft 365 Copilot & Agent Administration Fundamentals & AB-900 exam cram

Most people define AB-900 study tool as regular books and imagine that the more you buy, the higher your grade may be. It is true this kind of view make sense to some extent. However, our AB-900 real questions are high efficient priced with reasonable amount, acceptable to exam candidates around the world. Our AB-900 practice materials comprise of a number of academic questions for your practice, which are interlinked and helpful for your exam. Unlike those untenable practice materials in the market, our AB-900 practice materials are highly utilitarian for their accuracy of the real exam because all content are compiled by proficient experts who engaged in this area more than ten years. It is our unswerving will to help you pass the exam by AB-900 study tool smoothly.

Microsoft AB-900 Exam Syllabus Topics:

Topic	Details

Topic 1	<ul style="list-style-type: none"> Perform basic administrative tasks for Copilot and agents: This domain focuses on managing Copilot and agents, including licensing, feature controls, and usage monitoring. It also covers creating agents, managing prompts, configuring user access, and monitoring agent activity through admin centers.
Topic 2	<ul style="list-style-type: none"> Identify the core features and objects of Microsoft 365 services: This domain covers the main Microsoft 365 objects such as users, groups, licenses, mailboxes, SharePoint sites, and Teams. It also focuses on managing organization settings, roles, authentication, authorization, and core security features using Microsoft Entra and Microsoft Defender.
Topic 3	<ul style="list-style-type: none"> Understand data protection and governance tasks for Microsoft 365 and Copilot: This domain explains how Microsoft Purview protects and governs organizational data through classification, sensitivity labels, retention, and compliance tools. It also covers how Copilot accesses data, follows permissions, and how administrators monitor risks, alerts, and oversharing.

Microsoft 365 Copilot & Agent Administration Fundamentals Sample Questions (Q10-Q15):

NEW QUESTION # 10

Select the answer that correctly completes the sentence.

Answer:

Explanation:

Explanation:

The correct answer is accountability . Microsoft's Responsible AI framework is built on six principles: fairness , reliability and safety , privacy and security , inclusiveness , transparency , and accountability .

Microsoft describes accountability as the principle that people who design and deploy AI systems must remain responsible for how those systems operate and for the impacts they create. A key part of that principle is ensuring there is human oversight so humans remain in control of decisions and system behavior.

The other options do not match the wording in the sentence as closely. Transparency focuses on helping people understand how AI systems work and why they produce certain outcomes. Privacy and security is about protecting data and securing systems.

Reliability and safety is about dependable and safe operation.

Inclusiveness is about designing AI that empowers and includes people broadly. The principle tied to oversight, responsibility, and keeping humans in control is accountability .

NEW QUESTION # 11

A user named User5 navigates to <https://myapps.microsoft.com> . After entering their username and password, User5 receives the displayed message on their mobile device.

Use the drop-down menus to select the answer choice that completes the statement based on the information presented in the graphic.

Answer:

Explanation:

Explanation:

the Microsoft Authenticator app

The correct answer is the Microsoft Authenticator app . The image shows the familiar Microsoft MFA prompt that says "Are you trying to sign in?" and "Enter the number shown to sign in." Microsoft documents this as number matching in Authenticator push notifications , which is part of Microsoft Entra multifactor authentication using the Microsoft Authenticator app . Microsoft explains that number matching is a security improvement for Authenticator push approvals and is used when the default sign-in method is Authenticator push notifications.

The other choices do not match the experience shown. Email OTP would involve a one-time code sent by email. SMS would send a text message code to a phone number. Temporary Access Pass is a time-limited passcode used for onboarding or recovery scenarios, not the mobile push screen shown in the image. Because the graphic specifically shows a mobile approval prompt with number matching, the MFA method is clearly the Microsoft Authenticator app .

NEW QUESTION # 12

Select the answer that correctly completes the sentence.

Answer:

Explanation:

The correct answer is Microsoft 365 Copilot . Microsoft Learn states that Restricted SharePoint Search (RSS) gives organizations time to review and correct permissions on SharePoint sites, and then add only those reviewed sites to an allowed list that Copilot can access . That means RSS is specifically about restricting Copilot's access to SharePoint content, not blocking administrators, guest users, or Microsoft Purview eDiscovery from those sites.

This distinction is important. Microsoft explains that users can still access SharePoint content based on their normal permissions, while RSS limits what Microsoft 365 Copilot can use as grounding data until site permissions are reviewed and approved. So the feature helps reduce oversharing risk in Copilot without removing a user's direct ability to find or open content they already have permission to access in SharePoint.

In other words, the restriction is placed on Copilot's searchable grounding scope , not on the user's own SharePoint permissions. That is why the sentence is correctly completed with Microsoft 365 Copilot .

NEW QUESTION # 13

Select the answer that correctly completes the sentence.

Answer:

Explanation:

Explanation:

The correct answer is Microsoft 365 Copilot . Microsoft Learn states that Restricted SharePoint Search (RSS) gives organizations time to review and correct permissions on SharePoint sites, and then add only those reviewed sites to an allowed list that Copilot can access . That means RSS is specifically about restricting Copilot's access to SharePoint content, not blocking administrators, guest users, or Microsoft Purview eDiscovery from those sites.

This distinction is important. Microsoft explains that users can still access SharePoint content based on their normal permissions, while RSS limits what Microsoft 365 Copilot can use as grounding data until site permissions are reviewed and approved. So the feature helps reduce oversharing risk in Copilot without removing a user's direct ability to find or open content they already have permission to access in SharePoint.

In other words, the restriction is placed on Copilot's searchable grounding scope , not on the user's own SharePoint permissions. That is why the sentence is correctly completed with Microsoft 365 Copilot .

NEW QUESTION # 14

A Finance user received a sophisticated phishing email with a malicious link that was neutralized.

The security team needs a single, centralized view to review the incident timeline, related alerts (email and endpoint), and recommended actions to harden posture across email and endpoints.

Which Defender XDR capability or portal area gives the security operations team that unified incident timeline and improvement recommendations?

- A. Microsoft Defender for Identity
- B. Microsoft Defender for Office 365
- **C. The unified Incidents and Alerts experience plus Secure Score in the Microsoft Defender portal**
- D. Microsoft Defender Vulnerability Management

Answer: C
