

# Unparalleled Latest C\_S43 Real Test Help You to Get Acquainted with Real C\_S43 Exam Simulation

Our supporter of C\_S43 study guide has exceeded tens of thousands around the world, which directly reflects the quality of them. Because the exam may put a heavy burden on your shoulder while our C\_S43 practice materials can relieve you of those troubles with time passing by. Just spent some time regularly on our C\_S43 Exam simulation, your possibility of getting it will be improved greatly.

C\_S43 training materials are famous for high quality, and we have received many good feedbacks from our customers. C\_S43 exam materials are compiled by skilled professionals, and they possess the professional knowledge for the exam, therefore, you can use them at ease. In addition, C\_S43 training materials contain both questions and answers, and it's convenient for you to have a check after practicing. You can receive download link and password within ten minutes after paying for C\_S43 Exam Braindumps, it's convenient. If you don't receive, you can contact us, and we will solve this problem for you as quickly as possible.

>> Latest C\_S43 Real Test <<

## C\_S43 Latest Exam Tips | C\_S43 Valid Exam Review

We at itPass4sure give you the techniques and resources to make sure you get the most out of your exam study. We provide preparation material for the SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C\_S43\_2601) exam that will guide you when you sit to study for it. C\_S43 updated questions give you enough confidence to sit for the SAP exam. If you take enough practice tests on C\_S43 Practice Exam software by itPass4sure, you'll be more comfortable when you walk in on SAP exam day. So, go with C\_S43 exam questions that are prepared under the supervision of industry experts to expand your knowledge base and successfully pass the certification exam on the first attempt.

## SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C\_S43\_2601) Sample Questions (Q11-Q16):

### NEW QUESTION # 11

Task 11: Classify a piece of Equipment

The project team evaluates during the implementation project the classification of Technical Objects in order to use Checklists in SAP S/4HANA Asset Management. The following features need to be checked:

- \* Assign a class to a Technical Object
- \* Assign characteristic values to a class
- \* Assign class EQ11 value to Technical Object T-PA## .
- \* Assign a characteristic value, so that Inspection Plan Q / CL-DE-00 / 1 is automatically found during the checklist process

### Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 11 Overview

This task involves classifying a piece of equipment so it can be used in the Checklist process . By assigning a specific class and characteristic values, you enable the system to automatically find the correct inspection plan when a maintenance order is created.

Step 1: Access the Equipment Master Record

To classify the equipment, you must first open its master record in "Change" mode.

\* Transaction Code : Enter IE02 (Change Equipment) in the command field and press Enter .

\* Equipment : Enter T-PA48 .

\* Action : Press Enter to open the record.

Step 2: Assign the Class to the Equipment

Now you will link the equipment to a class that contains the required technical characteristics.

\* Navigate : Click the Classification button in the top toolbar (or go to the Classes tab if available).

\* Class Assignment :

\* Class Type : Ensure this is set to 002 (Equipment Class).

\* Class : Enter EQ11 .

\* Action : Press Enter . The system will now display the characteristics associated with class EQ11 in the bottom half of the screen.

Explanation : Assigning a class is like giving the equipment a "category". Class EQ11 is specifically configured in this system to hold the data needed for checklist processing.

Step 3: Assign Characteristic Values

This is the critical step that tells the system exactly which inspection plan to use for this specific pump.

\* Locate the Characteristic : In the values table, look for a characteristic related to "Inspection Plan" or "Checklist Group."

\* Enter the Value : Assign the value so that Inspection Plan CL-DE-00 / 1 is automatically found.

\* Note: Typically, you will enter CL-DE-00 in the "Inspection Plan Group" field and 1 in the "Group Counter" field.

\* Action : Press Enter to validate the values.

Explanation : Characteristic values are the specific details for this asset. By entering these values, you "tag" the equipment so that whenever it is added to a maintenance order, the system knows to look for the CL-DE-00 checklist automatically.

Step 4: Save

\* Action : Click the Save (floppy disk) icon.

\* Confirmation : The system should display a message at the bottom saying: "Equipment T-PA48 changed."

## NEW QUESTION # 12

Create a Maintenance Order with Checklists

The project team evaluates during the implementation project Maintenance Orders with Checklists in SAP S/4HANA Asset Management. The following features need to be checked:

\* Create a Maintenance Order with Checklist

\* Display a Maintenance Order with automatically generated Object List and Checklist.

\* Create a Maintenance Order using an Order Type which is already configured for the checklist process.

Use the following data:

\* Display the previously created Maintenance Order with automatically generated Object List and Checklist.

### Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 12 Overview

In this task, you will create a maintenance order using a specific order type configured for the checklist process. The system will then automatically generate an object list and a corresponding checklist based on the equipment and task list assigned.

Step 1: Create a Maintenance Order with Checklist

You need to create a new order using a functional location and a specific task list that triggers the checklist functionality.

\* Access the Transaction : Use transaction code IW31 (Create Maintenance Order).

\* Initial Screen :

\* Order Type : Select an order type already configured for the checklist process (typically PM01 or a specific custom type designated for checklists in your training environment).

\* Press Enter .

\* Enter Header and Location Data :

\* Functional Location : Enter 48-01-PRD-01-03-HD .

\* Description : Enter a relevant description (e.g., Pump Checklist Maintenance GR48).

- \* Assign the Task List :
- \* Go to the Operations tab or find the task list assignment section.
- \* General Maintenance Task List : Enter A / T-PMCLLEN / 1 .
- \* Press Enter to validate.
- \* Save : Click the Save (floppy disk) icon.

Explanation : By assigning this specific functional location and general task list, you are triggering the "Checklist" integration. The system uses the classification data you set up in Task 11 to determine that a checklist (inspection lot) is required for this job.

Step 2: Display and Verify the Checklist

After saving, you must verify that the system correctly generated the technical components of the checklist.

- \* Display the Order : Use transaction code IW33 and enter the order number you just created.
- \* Verify the Object List :
- \* Navigate to the Object List tab.
- \* You should see the equipment or functional location listed here with a link to the checklist.
- \* Verify the Checklist :
- \* Look for a button or tab labeled Checklists or Inspection Lot within the order.
- \* The system should show that a checklist has been automatically generated for the repair operations.

Explanation : The goal of this step is to confirm that the "Object List" and "Checklist" were created automatically by the system. This proves the background configuration for QM (Quality Management) integration is working correctly with your maintenance order

### NEW QUESTION # 13

Check Inspection Lot and record Inspection Results

The project team evaluates during the implementation project the checking of Inspection Lots Checklist processing including result recording. The following features need to be checked:

- \* Display the automatically created Inspection Lot
- \* Record Inspection Results
- \* Display the automatically created Inspection Lot for the previously created Maintenance Order including Checklist. The Inspection Lot comprises the following data:
  - \* Record Inspection Results for the previously created Inspection Lot so that the Usage Decision is automatically set to Can be used

### Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 13 Overview

This task focuses on the quality management (QM) integration with maintenance. You will verify the inspection lot that was automatically triggered by your maintenance order and then record the results to confirm the technical object is fit for use.

Step 1: Display the Automatically Created Inspection Lot

Before recording results, you must verify that the system generated the correct inspection lot for your maintenance order.

- \* Access the Transaction : Enter QA03 (Display Inspection Lot) in the command field and press Enter .
- \* Locate the Lot : Search for the inspection lot associated with the maintenance order you created in Task 12.
- \* Verify the Following Data :
- \* Material : T-PM1100
- \* Plant : 1010
- \* Inspection Lot Origin : 89 (Miscellaneous)
- \* Group : CL-DE-00
- \* Group Counter : 1

Explanation : The inspection lot is the central record for quality testing. Seeing these specific values (Group CL-DE-00) confirms that the classification you set up in Task 11 correctly triggered the intended inspection plan.

Step 2: Record Inspection Results

This is the process of entering the actual findings from the checklist inspection.

- \* Access the Transaction : You can navigate directly from the Inspection Lot in QA03 or use transaction QE51N (Results Recording Selection).
- \* Select the Lot : Enter your inspection lot number and click Execute .
- \* Record Results :
- \* Enter the inspection values for each characteristic listed in the checklist.
- \* Ensure the values you enter are within the "Acceptable" range or marked as "Pass".

- \* Automatic Usage Decision : Record the results such that the Usage Decision (UD) is automatically set to "Can be used" .
- \* Save : Click the Save (floppy disk) icon.

Explanation : By recording positive results, you satisfy the quality requirements for the maintenance task.

The automatic transition to "Can be used" status tells the system the pump has passed inspection and the maintenance order can proceed toward completion.

#### NEW QUESTION # 14

Use Phase-Based Maintenance Processing

The project team evaluates during the implementation project Phase-Based Maintenance Processing in SAP S/4HANA Asset Management. The following features need to be checked:

- \* Initiate and screen a Maintenance Notification
- \* Plan Maintenance Order and send it for approval
- \* Create a Maintenance Notification using an already available notification type which is suitable for phase-based maintenance and save it.

Use the following data:

- \* Screen and accept the just created Maintenance Notification.
- \* Create an Order (Phase-based) for your accepted notification and submit it for approval.

Use the following data:

#### Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 10 Overview

This task evaluates your ability to manage the newer, phase-led maintenance workflow in SAP S/4HANA.

Unlike the traditional "emergency" repair you did earlier, this process includes formal screening and approval steps Step 1: Create a Phase-Based Maintenance Notification In this step, you initiate the request.

- \* Access the Transaction : Use transaction IW21 or the Fiori app Create Maintenance Request .
- \* Select Notification Type : Use a type configured for phase-based maintenance (typically Y1 - Maintenance Request ).
- \* Enter the Following Data :
- \* Technical Object : T-PB48
- \* Description : Defective pump (phase-based)
- \* Current Location : Production Line 1
- \* Detection Method : Continuous Condition Monitoring
- \* Operational Effect : Production restricted
- \* Save : Note the notification number generated.

Explanation : This step "initiates" the maintenance process. In phase-based maintenance, the notification starts in the Initiation phase, where it must be reviewed before any work is planned.

Step 2: Screen and Accept the Notification

As a "Maintenance Coordinator," you must now review the request.

- \* Access the Fiori App : Open Screen Maintenance Requests .
- \* Locate Your Notification : Find the notification you just created for T-PB48.
- \* Perform Screening :
- \* Review the details to ensure they are complete.
- \* Click Accept to move it to the next phase.

Explanation : "Screening" is a quality gate. It ensures that the maintenance team only spends time planning valid, well-described issues. Once accepted, the notification moves from the Initiation phase to the Screening phase and finally becomes available for planning.

Step 3: Create and Plan the Phase-Based Order

Now you will create the formal work order for the accepted request.

- \* Create Order : From within the accepted notification, or using the Manage Maintenance Backlog app, choose to Create Order .
- \* Enter Planning Data :
- \* Technical Object : T-PB48
- \* Operation 0010 Description : Repair damage
- \* Operation 0010 Work : 2 h
- \* Submit for Approval : Look for the Submit for Approval button at the top of the order screen.

Explanation : This step moves the order into the Planning phase. By submitting it for approval, you are requesting the budget and resources to perform the work. The order status will change to indicate it is

"Waiting for Approval"

### NEW QUESTION # 15

Create and use a Maintenance Work Center

The project team evaluates during the implementation project the organizational elements in SAP S/4HANA Asset Management.

The following features need to be checked:

- \* Create a Maintenance Work Center
- \* Create a capacity demand for a Maintenance Work Center
- \* Create a new Maintenance Work Center master record ZZ-ME## for maintenance plant 1010 similar to maintenance work center T-ME00 and save it. Use the following information:
  - Create a capacity demand of 1 hour for the just created Maintenance Work Center ZZ-ME## by creating a new maintenance order of order type PM01 .

### Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 3: Create and Use a Maintenance Work Center

Objective

In Task 3, the requirement was to:

- \* create a new maintenance work center ZZ-ME42 for plant 1010 similar to T-ME00
- \* maintain the required capacity values
- \* create a 1-hour capacity demand for that work center by creating a maintenance order of type PM01

□

Part 1: Create the Maintenance Work Center

Requirement from task file

The task required the following values for the work center:

- \* Plant = 1010
- \* Work Center = ZZ-ME42
- \* Description = Mechanical Maintenance 42
- \* No. Ind. Capacities = 5
- \* Capacity = 24.00 H

The task also stated that the work center must be created similar to maintenance work center T-ME00 .

□

Step-by-step procedure

Step 1: Open work center creation

- \* Go to SAP GUI command field
- \* Enter transaction IR01
- \* Press Enter

Transaction IR01 is used to create a new work center. This is the correct starting point for creating the maintenance work center required in Task 3.

Step 2: Enter initial work center data

On the Create Work Center: Initial Screen , enter:

- \* Plant = 1010
- \* Work Center = ZZ-ME42
- \* Work Center Category = 0005
- \* In Copy from :
- \* Plant = 1010
- \* Work Center = T-ME00

Then press Enter .

The task explicitly required the work center to be created for plant 1010 and to be created similar to T-ME00.

Work center category 0005 is the maintenance work center category, so this was the correct category to use for a maintenance work center.

Step 3: Include capacity data during copy

When the Copy from popup appeared:

- \* select Capacities
- \* continue with the green check

This was important because the task required changing capacity-related data:

- \* No. Ind. Capacities = 5
- \* Capacity = 24.00 H Copying the capacity data ensured the new work center inherited the capacity structure from T-ME00 and

could then be adjusted correctly.

Step 4: Maintain basic data

On the work center master screen:

- \* change the description to Mechanical Maintenance 42

This matches the exact description required by the task.

Step 5: Maintain capacity values

Go to the Capacities tab, then open the capacity detail screen.

Maintain or verify:

- \* No. Ind. Capacities = 5

- \* Capacity Base Unit = H

- \* Capacity recalculated to 24.00 H

In our system, the Capacity field was system-calculated and not directly editable.

The final valid values were achieved with:

- \* Start Time = 08:00:00

- \* End Time = 17:00:00

- \* Length of breaks = 01:00:00

- \* Capacity Utilization = 60

- \* No. Ind. Capacities = 5

This produced:

- \* Capacity = 24.00 H

The task required 24.00 H capacity, but SAP calculated it automatically based on operating time, utilization, and number of individual capacities.

The resulting calculation was correct and matched the task requirement exactly.

Step 6: Save the work center

- \* Click Save

Later, when trying to create the same work center again, SAP displayed the system message:

- \* "Work center ZZ-ME42 in plant 1010 already exists"

Explanation / Verification:

This system message confirmed that the work center had already been created successfully.

Therefore, the creation of ZZ-ME42 was verified as complete.

Part 2: Create a 1-Hour Capacity Demand

Requirement from task file

The task required:

- \* create a capacity demand of 1 hour

- \* for the newly created maintenance work center ZZ-ME42

- \* by creating a maintenance order of type PM01

Step-by-step procedure

Step 7: Open maintenance order creation

- \* In the command field, enter /nIW31

- \* Press Enter

Transaction IW31 is used to create a maintenance order.

The /n ensured SAP exited the previous transaction and opened the new one directly.

Step 8: Enter order header data

On the Create Maintenance Order: Initial Screen, enter:

- \* Order Type = PM01

- \* Planning Plant = 1010

Then press Enter .

The task explicitly required the capacity demand to be created by means of a maintenance order of type PM01 .

Step 9: Enter order description

On the order header screen, enter a short text such as:

- \* Capacity demand ZZ-ME42

The task did not prescribe a specific short text, so a meaningful description was used for traceability.

Step 10: Create the first operation

In the first operation area / operations overview, maintain:

- \* Operation = 0010

- \* Work Center = ZZ-ME42

- \* Plant = 1010

- \* Control Key = PM01

- \* Work Duration / Work = 1

- \* Unit = H

Then press Enter .

This operation is the actual source of the capacity demand .

The capacity demand is not created merely by the order header; it is created by assigning the operation to the work center with a planned work value of 1 hour .

Therefore, these operation entries were the critical part of fulfilling Task 3.

Step 11: Save the maintenance order

\* Click Save

SAP displayed the confirmation message:

\* "Order saved with number 4000314"

Explanation / Verification:

This was the final confirmation that the maintenance order had been created successfully.

Because the operation was assigned to ZZ-ME42 with 1 H planned work, this verified that the required 1- hour capacity demand had been created for the work center.

Verified completed objects

The following results were verified during execution:

\* Maintenance Work Center created

\* Work Center = ZZ-ME42

\* Plant = 1010

\* confirmed by SAP message that the work center already existed when rechecked

\* Capacity maintained correctly

\* No. Ind. Capacities = 5

\* Capacity = 24.00 H

\* Capacity demand created

\* maintenance order type PM01

\* operation assigned to ZZ-ME42

\* planned work = 1 H

\* Order successfully saved

\* SAP confirmation: Order saved with number 4000314

## NEW QUESTION # 16

.....

C\_S43 Preparation materials will be the good helper for your qualification certification. We are concentrating on providing high-quality authorized C\_S43 study guide all over the world so that you can clear exam one time. C\_S43 reliable exam bootcamp materials contain three formats: PDF version, Soft test engine and APP test engine so that our products are enough to satisfy different candidates' habits and cover nearly full questions & answers of the real test.

**C\_S43 Latest Exam Tips:** [https://www.itpass4sure.com/C\\_S43-practice-exam.html](https://www.itpass4sure.com/C_S43-practice-exam.html)

You are free to get a hard copy of SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C\_S43\_2601) (C\_S43) PDF questions or study them on your smartphones, tablets, and laptops at your convenience, The former customers always said that our C\_S43 dump collection files are desirable for its accuracy and efficiency, because they met the same questions during the test when they attend the real test, We release 100% pass-rate C\_S43 study guide files which guarantee candidates 100% pass exam in the first attempt.

Here to help both the newcomer and professional who needs to brush up C\_S43 on their skills is the first book to cover a wide variety of techniques that can be used by colorists, no matter what system they're using.

## SAP C\_S43 Exam Dumps - Best Exam Preparation Method

font menu favorites, QR codes, and much more, You are free to get a hard copy of SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C\_S43\_2601) (C\_S43) PDF questions or study them on your smartphones, tablets, and laptops at your convenience.

The former customers always said that our C\_S43 dump collection files are desirable for its accuracy and efficiency, because they met the same questions during the test when they attend the real test.

We release 100% pass-rate C\_S43 study guide files which guarantee candidates 100% pass exam in the first attempt, Without doubt, our C\_S43 practice dumps keep up with the latest information and contain the most valued key points that will show up in the real C\_S43 exam.

When you choose C\_S43 actual vce dumps, you can download it and install it on your phone or i-pad, thus you can make full use of your spare time, such as, take the subway or wait for the bus.
