

ECCouncil 312-50v13 Brain Dumps | 312-50v13 Test Questions

BONUS!!! Download part of TestPassed 312-50v13 dumps for free: <https://drive.google.com/open?id=1oWwnMHA41UHscBc9FzxtXXwU1lma8COI>

It was never so easy to make your way to the world's most rewarding professional qualification as it has become now! TestPassed' 312-50v13 practice test questions answers are the best option to secure your success in just one go. You can easily answer all exam questions by doing our 312-50v13 exam dumps repeatedly. For further sharpening your skills, practice mock tests using our 312-50v13 Brain Dumps Testing Engine software and overcome your fear of failing exam. Our Certified Ethical Hacker Exam (CEHv13) dumps are the most trustworthy, reliable and the best helpful study content that will prove the best alternative to your time and money.

There are thousands of customers that have passed the Certified Ethical Hacker Exam (CEHv13) (312-50v13) examination by merely using the product of TestPassed. We keep updating our Certified Ethical Hacker Exam (CEHv13) (312-50v13) preparation material after getting feedback from professionals. A 24/7 customer is available at TestPassed to help customers in the right way and solve their problems quickly.

312-50v13 Brain Dumps and ECCouncil 312-50v13 Test Questions: Certified Ethical Hacker Exam (CEHv13) Finally Passed

Our 312-50v13 learning question can provide you with a comprehensive service beyond your imagination. 312-50v13 exam guide

has a first-class service team to provide you with 24-hour efficient online services. Our team includes industry experts & professional personnel and after-sales service personnel, etc. Industry experts hired by 312-50v13 exam guide helps you to formulate a perfect learning system, and to predict the direction of the exam, and make your learning easy and efficient. Our staff can help you solve the problems that 312-50v13 Test Prep has in the process of installation and download. They can provide remote online help whenever you need. And after-sales service staff will help you to solve all the questions arising after you purchase 312-50v13 learning question, any time you have any questions you can send an e-mail to consult them. All the help provided by 312-50v13 test prep is free. It is our happiest thing to solve the problem for you. Please feel free to contact us if you have any problems.

ECCouncil Certified Ethical Hacker Exam (CEHv13) Sample Questions (Q635-Q640):

NEW QUESTION # 635

Which of the following types of SQL injection attacks extends the results returned by the original query, enabling attackers to run two or more statements if they have the same structure as the original one?

- A. Blind SQL injection
- B. Boolean-based blind SQL injection
- C. Error-based injection
- **D. Union SQL injection**

Answer: D

Explanation:

Union-based SQL injection is a technique that uses the UNION SQL operator to combine the results of the original query with the results of one or more additional queries. This allows attackers to:

Retrieve data from different database tables

Extend the result set returned to the web application

Exploit the application if both queries return the same number and type of columns According to CEH v13:

UNION SELECT can be used to enumerate tables, extract user credentials, or display sensitive data.

It requires knowledge of the structure of the original query.

Incorrect Options:

A: Error-based injection extracts data from database error messages.

B: Boolean-based blind SQLi returns true/false results to infer data.

C: Blind SQLi (generic) relies on no visible output and uses inference techniques.

Reference - CEH v13 Official Courseware:

Module 14: Hacking Web Applications

Section: "Types of SQL Injection Attacks"

Subsection: "Union-Based SQL Injection"

NEW QUESTION # 636

Joseph was the Web site administrator for the Mason Insurance in New York, who's main Web site was located at www.masonins.com. Joseph uses his laptop computer regularly to administer the Web site. One night, Joseph received an urgent phone call from his friend, Smith. According to Smith, the main Mason Insurance web site had been vandalized! All of its normal content was removed and replaced with an attacker's message "Hacker Message: You are dead! Freaks!" From his office, which was directly connected to Mason Insurance's internal network, Joseph surfed to the Web site using his laptop. In his browser, the Web site looked completely intact.

No changes were apparent. Joseph called a friend of his at his home to help troubleshoot the problem. The Web site appeared defaced when his friend visited using his DSL connection. So, while Smith and his friend could see the defaced page, Joseph saw the intact Mason Insurance web site. To help make sense of this problem, Joseph decided to access the Web site using his dial-up ISP. He disconnected his laptop from the corporate internal network and used his modem to dial up the same ISP used by Smith. After his modem connected, he quickly typed www.masonins.com in his browser to reveal the following web page:

After seeing the defaced Web site, he disconnected his dial-up line, reconnected to the internal network, and used Secure Shell (SSH) to log in directly to the Web server. He ran Tripwire against the entire Web site, and determined that every system file and all the Web content on the server were intact. How did the attacker accomplish this hack?

- A. Routing table injection
- **B. DNS poisoning**
- C. SQL injection

- D. ARP spoofing

Answer: B

NEW QUESTION # 637

During the enumeration phase, Lawrence performs banner grabbing to obtain information such as OS details and versions of services running. The service that he enumerated runs directly on TCP port 445.

Which of the following services is enumerated by Lawrence in this scenario?

- A. Telnet
- B. Network File System (NFS)
- C. Server Message Block (SMB)
- D. Remote procedure call (RPC)

Answer: C

Explanation:

Worker Message Block (SMB) is an organization document sharing and information texture convention. SMB is utilized by billions of gadgets in a different arrangement of working frameworks, including Windows, MacOS, iOS, Linux, and Android. Customers use SMB to get to information on workers. This permits sharing of records, unified information the board, and brought down capacity limit needs for cell phones.

Workers additionally use SMB as a feature of the Software-characterized Data Center for outstanding burdens like grouping and replication.

Since SMB is a far off record framework, it requires security from assaults where a Windows PC may be fooled into reaching a pernicious worker running inside a confided in organization or to a far off worker outside the organization edge. Firewall best practices and arrangements can upgrade security keeping malevolent traffic from leaving the PC or its organization.

For Windows customers and workers that don't have SMB shares, you can obstruct all inbound SMB traffic utilizing the Windows Defender Firewall to keep far off associations from malignant or bargained gadgets. In the Windows Defender Firewall, this incorporates the accompanying inbound principles.

Name	Profile	Enabled
File and Printer Sharing (SMB-In)	All	No
Negotiate Service (NP-In)	All	No
Remote Event Log Management (RPC-In)	All	No
Remote Service Management (RPC-In)	All	No

You should also create a new blocking rule to override any other inbound firewall rules. Use the following suggested settings for any Windows clients or servers that do not host SMB Shares:

Name: Block all inbound SMB 445

Description: Blocks all inbound SMB TCP 445 traffic. Not to be applied to domain controllers or computers that host SMB shares.

Action: Block the connection

Programs: All

Remote Computers: Any

Protocol Type: TCP

Local Port: 445

Remote Port: Any

Profiles: All

Scope (Local IP Address): Any

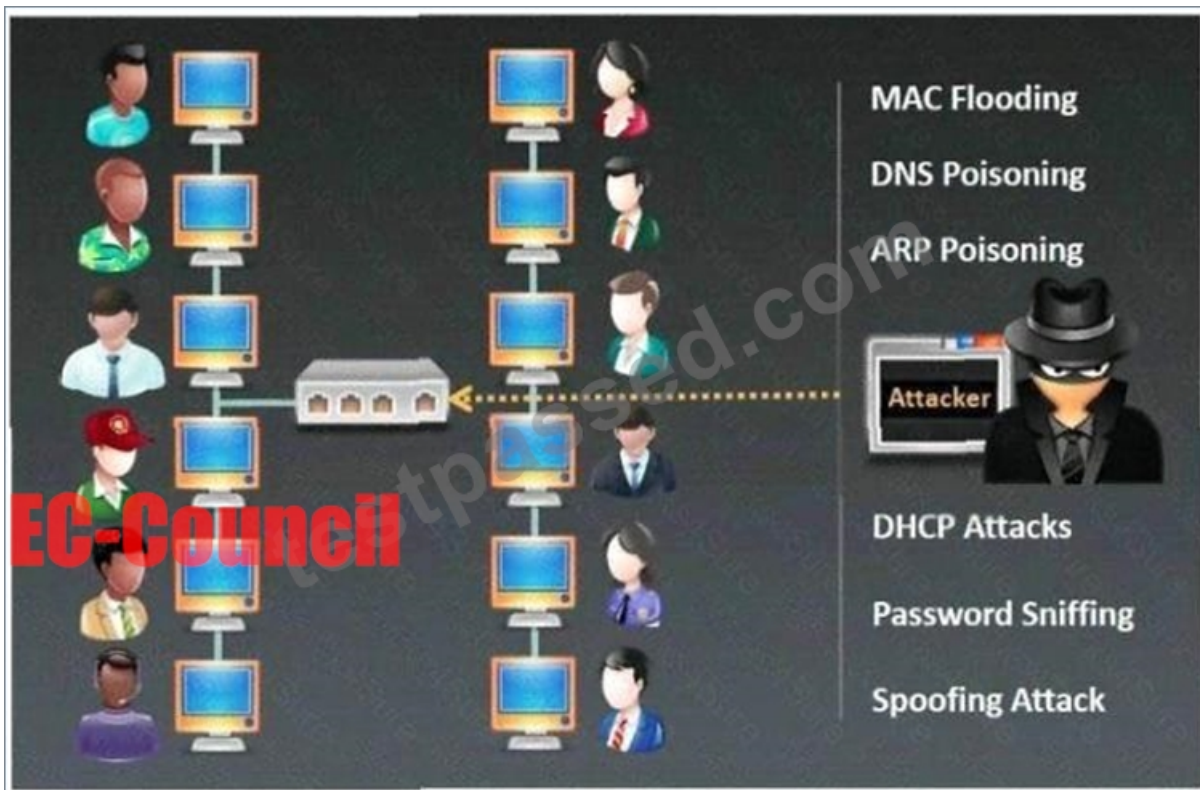

Scope (Remote IP Address): Any

Edge Traversal: Block edge traversal

You must not globally block inbound SMB traffic to domain controllers or file servers. However, you can restrict access to them from trusted IP ranges and devices to lower their attack surface. They should also be restricted to Domain or Private firewall profiles and not allow Guest/Public traffic.

NEW QUESTION # 638

Which type of sniffing technique is generally referred as MiTM attack?

- A. MAC Flooding
- B. Password Sniffing
- C. ARP Poisoning
- D. DHCP Sniffing

Answer: C

Explanation:

Comprehensive and Detailed Explanation:

ARP Poisoning (Address Resolution Protocol Poisoning) is a classic Man-in-the-Middle (MiTM) attack in a LAN environment. It works by sending fake ARP replies to devices on a network to associate the attacker's MAC address with the IP address of another host (typically the default gateway). As a result:

- * Network traffic meant for the gateway is sent to the attacker instead.
- * The attacker can then intercept, modify, or forward the traffic to the actual destination, performing a full MiTM.

This allows the attacker to:

- * Sniff sensitive data (e.g., credentials, emails)
- * Hijack sessions
- * Inject malicious payloads

From CEH v13 Courseware:

- * Module 8: Sniffing
- * Topic: MiTM Attacks # ARP Spoofing Techniques

Incorrect Options:

- * A. Password Sniffing is a result of MiTM but not a technique itself.
- * C. MAC Flooding is a switch attack that floods the CAM table to make the switch act like a hub.
- * D. DHCP Sniffing relates to capturing DHCP messages but is not commonly used for MiTM.

NEW QUESTION # 639

Techno Security Inc. recently hired John as a penetration tester. He was tasked with identifying open ports in the target network and determining whether the ports are online and any firewall rule sets are encountered.

John decided to perform a TCP SYN ping scan on the target network. Which of the following Nmap commands must John use to perform the TCP SYN ping scan?

- A. nmap -sn -pp < target ip address >
- B. nmap -sn -PA < target IP address >
- C. nmap -sn -PS < target IP address >
- D. nmap -sn -PO < target IP address >

Answer: C

Explanation:
