Our FCSS_SDW_AR-7.4 study materials can help you pass test faster. You can take advantage of the certification. Many people

improve their ability to perform more efficiently in their daily work with the help of our FCSS_SDW_AR-7.4 exam questions and you can be as good as they are. The moment you choose to go with our FCSS_SDW_AR-7.4 Study Materials, your dream will be more clearly presented to you. Next, through my introduction, I hope you can have a deeper understanding of our FCSS_SDW_AR-7.4 learning quiz. We really hope that our FCSS_SDW_AR-7.4 study materials will give you the help to pass the exam.

Fortinet FCSS - SD-WAN 7.4 Architect Sample Questions (Q54-Q59):

NEW QUESTION # 54

Refer to the exhibit. Which action will FortiGate take if it detects SD-WAN members as dead?

```
config system sdwan
  set fail-detect enable
  set fail-alert-interfaces "port5"
  config health-check
    edit "Level3_DNS"
      set update-cascade-interface enable
      set members 1 2
    next
    edit "HQ"
      set update-cascade-interface enable
      set members 3
    next
  end
end
```

- A. FortiGate brings down port5 after it detects all SD-WAN members as dead.
- B. FortiGate sends alert messages through port5 when it detects all SD-WAN members as dead.
- C. FortiGate bounces port5 after it detects all SD-WAN members as dead.
- D. FortiGate fails over to the secondary device after it detects port5 as dead.

Answer: A

Explanation:

Member State Change Actions—Cascade Interfaces

- Shut down alert interfaces, if all members are dead
- Bring up alert interfaces, if at least one member is alive
- Use case: Force the LAN to use an alternative path

- For each SD-WAN instance

SD-WAN > Advanced Options

fail-alert-interfaces	port5
fail-detect	<input checked="" type="checkbox"/>

- For each performance SLA

SD-WAN > Performance SLA

Action When Inactive	
Update Static Route	<input checked="" type="checkbox"/>
Cascade Interfaces	<input checked="" type="checkbox"/>

Configure one or more alert interfaces

```
config system sdwan
  set fail-detect enable
  set fail-alert-interfaces "port5"
config health-check
  edit "Corp HC"
    set update-cascade-interface enable
  set members 1 2
  next
  edit "HO"
    set update-cascade-interface enable
  set members 3
  next
  ...
```

When you enable **Cascade Interfaces** and configure one or more alert interfaces, one of the following events occurs:

- FortiGate shuts down the alert interfaces, if all members are dead, for example, because of degraded performances.
- FortiGate brings up the alert interfaces, if at least one member is alive.

Cascade Interfaces is useful to force the traffic from networks behind the alert interfaces to be routed through a different device, if all SD-WAN members are dead, which could mean that FortiGate is unable to forward traffic to the WAN.

An administrator is testing application steering in SD-WAN. Before generating test traffic, the administrator collected the information shown in the first exhibit. After generating GoToMeeting test traffic, the administrator examined the corresponding traffic log on FortiAnalyzer, which is shown in the second exhibit.

The administrator noticed that the traffic matched the implicit SD-WAN rule, but they expected the traffic to match rule ID 1. Which two reasons explain why some log messages show that the traffic matched the implicit SD-WAN rule? (Choose two.)

- A. FortiGate could not refresh the routing information on the session after the application was detected.
- B. No configured SD-WAN rule matches the traffic related to the collaboration application GoToMeeting
- C. The session 3-tuple did not match any of the existing entries in the ISDB application cache.
- D. Full SSL inspection is not enabled on the matching firewall policy.

Which SD-WAN rule and interface uses FortiGate to steer the traffic from the LAN subnet 10.0.1.0/24 to the corporate server 10.2.5.254?

- A. SD-WAN service rule 4 and port1 or port2.
- B. SD-WAN service rule 3 and interface HUB1-VPN2.
- **C. SD-WAN service rule 4 and interface port2.**
- D. SD-WAN service rule 3 and interface HUB1-VPN3.

Answer: C

Explanation:

Traffic steering in Fortinet SD-WAN is based on defined rules and the corresponding outgoing interfaces. The exhibit (not shown here) would indicate that the traffic from the LAN subnet 10.0.1.0/24 to the server 10.2.5.254 is matched by SD-WAN rule 3 and sent out via the HUB1-VPN3 interface.

NEW QUESTION # 57

Which three characteristics apply to provisioning templates available on FortiManager? (Choose three.)

- **A. CLI templates are applied in order, from top to bottom.**

- B. A CLI template can be of type CLI script or Perl script.
- C. A template group can include a system template and an SD-WAN template.
- D. A CLI template group can contain CLI templates of both types.
- E. You cannot apply a system template and CLI template to the same FortiGate device.

Answer: A,C,D

NEW QUESTION # 58

Which statement describes FortiGate behavior when you reference a zone in a static route?

- A. FortiGate installs a static route for each member in the zone.
- B. FortiGate ignores the static routes defined through members referenced in the zone.
- C. FortiGate installs ECMP static routes for the first two members of the zone.
- D. FortiGate routes the traffic through the best performing member of the zone.
