

# Neueste Plat-Arch-204 Pass Guide & neue Prüfung Plat-Arch-204 braindumps & 100% Erfolgsquote

P.S. Kostenlose 2026 Salesforce Plat-Arch-204 Prüfungsfragen sind auf Google Drive freigegeben von Pass4Test verfügbar: <https://drive.google.com/open?id=1Y3bHTXPNEh-d0RTBCZbCOAg3Jsb382F>

Wie kann man Erfolge erlangen. Es gibt nur eine Anknüpfung, nämlich: die Lernhilfe zur Salesforce Plat-Arch-204 Zertifizierungsprüfung von Pass4Test zu benutzen. Das ist unser Vorschlag für jeden Kandidaten. Wir hoffen, dass Sie Ihren Traum erfüllen können.

## Salesforce Plat-Arch-204 Prüfungsplan:

Thema	Einzelheiten
Thema 1	<ul style="list-style-type: none"> <li>Design Integration Solutions: This domain centers on selecting integration patterns, designing complete solutions with appropriate components, understanding trade-offs and limitations, choosing correct Salesforce APIs, and determining required standards and security mechanisms.</li> </ul>
Thema 2	<ul style="list-style-type: none"> <li>Maintain Integration: This domain focuses on monitoring integration performance, defining error handling and recovery procedures, implementing escalation processes, and establishing reporting needs for ongoing integration health monitoring.</li> </ul>
Thema 3	<ul style="list-style-type: none"> <li>Translate Needs to Integration Requirements: This domain involves converting business needs into technical specifications by documenting systems and patterns, evaluating constraints, defining security requirements, and determining performance needs like volumes, response times, and latency.</li> </ul>
Thema 4	<ul style="list-style-type: none"> <li>Evaluate the Current System Landscape: This domain covers analyzing existing technical environments to understand current systems, their standards, protocols, limitations, and boundaries, while identifying constraints and authentication</li> <li>authorization requirements.</li> </ul>

## Salesforce Plat-Arch-204 Musterprüfungsfragen & Plat-Arch-204 PDF

Die Fragen und Antworten zur Salesforce Plat-Arch-204 Zertifizierungsprüfung von Pass4Test sind den echten Prüfung sehr ähnlich. Wenn Sie die Prüfungsfragen und Antworten von Pass4Test wählen, bieten wir Ihnen einen einjährigen kostenlosen Update-Service. Wir versprechen, dass Sie die Salesforce Plat-Arch-204 Prüfung 100% bestehen können. Sonst erstatteten wir Ihnen die gesammte Summe zurück.

# Salesforce Certified Platform Integration Architect Plat-Arch-204

## Prüfungsfragen mit Lösungen (Q69-Q74):

### 69. Frage

Universal Containers (UC) support agents would like to open bank accounts on the spot. During the process, agents execute credit checks through external agencies. At any given time, up to 30 concurrent reps will be using the service. Which error handling mechanisms should be built to display an error to the agent when the credit verification process has failed?

- **A. Handle Integration errors in the middleware in case the verification process is down, then the middleware should retry processing the request multiple times.**
- B. In case the verification process is down, use fire and forget mechanism instead of Request and Reply to allow the agent to get the response back when the service is back online.
- C. Handle the error in the synchronous callout and display a message to the agent. (Note: While not explicitly in the user's snippet, A and B are provided options; the standard architect answer for "displaying an error to the agent" in a synchronous flow is handling the exception in the UI layer).

**Antwort: A**

Begründung:

In a synchronous Request-Reply scenario where a bank agent is waiting "on the spot" for a credit check, the error-handling strategy must balance immediate feedback with system resilience.

Option A is the recommended architectural approach for enterprise resiliency. By placing a Middleware layer (like MuleSoft) between Salesforce and the credit agencies, the architect can implement sophisticated error-handling patterns that are invisible to the user but critical for success. If a credit agency's API is momentarily unreachable, the middleware can perform automated retries (e.g., three attempts with 500ms intervals). If the retries still fail, the middleware sends a clean, structured error response back to Salesforce.

Option B (Fire and Forget) is fundamentally unsuitable for this use case because the agent needs the result immediately to open the account; they cannot wait for a callback that might arrive hours later. Option C (Mock service) is only a testing tool and provides no value in a production environment where real financial data is required. By delegating the retry logic to the middleware, the architect protects Salesforce's concurrent request limits (since the agent only occupies a thread for the duration of the final response) and ensures that transient network issues do not result in a "failed" bank account application for the customer.

### 70. Frage

A customer's enterprise architect has identified requirements around caching, queuing, error handling, alerts, retries, event handling, etc. The company has asked the integration architect to help fulfill such aspects with its Salesforce program. Which recommendation should the integration architect make?

- A. Message transformation and protocol translation should be done within Salesforce.
- B. Transform a Fire and Forget mechanism to Request and Reply, which should be handled by middleware tools.
- **C. Provide true message queuing for integration scenarios given that a middleware solution is required.**

**Antwort: C**

Begründung:

Salesforce is a highly capable CRM platform, but it is not a dedicated messaging or orchestration engine. When requirements include complex message queuing, process choreography, and guaranteed quality of service (QoS), the Integration Architect must recommend a middleware solution (ESB or iPaaS).

"True message queuing" involves holding messages in a persistent state until the target system is ready to receive them, handling sophisticated retry logic (such as exponential backoff), and providing dead-letter queues for failed messages. While Salesforce has basic asynchronous tools like Outbound Messaging or Platform Events, they lack the granular control over queuing and orchestration that enterprise middleware provides.

Option A is incorrect because performing heavy transformation and protocol translation (like XML to JSON or SOAP to REST) within Salesforce consumes excessive Apex CPU time and is better handled by middleware designed for that purpose. Option B is conceptually backward; usually, architects move away from synchronous Request-Reply toward asynchronous Fire-and-Forget to improve scalability. By recommending a middleware solution to handle these infrastructure-level concerns, the architect ensures that Salesforce remains performant for its users while the middleware manages the technical complexities of reliably connecting the enterprise.

### 71. Frage

A customer is evaluating the Platform Events solution and would like help in comparing/contrasting it with Outbound Messaging for real-time/near-real time needs. They expect 3,000 customers to view messages in Salesforce. What should be evaluated and highlighted when deciding between the solutions?

- A. In both Platform Events and Outbound Messaging, the event messages are retried by and delivered in sequence, and only once. Salesforce ensures there is no duplicate message delivery.
- **B. Both Platform Events and Outbound Messaging offer declarative means for asynchronous near-real time needs. They aren't best suited for real-time integrations.**
- C. Message sequence is possible in Outbound Messaging, but not guaranteed with Platform Events. Both offer very high reliability. Fault handling and recovery are fully handled by Salesforce.

**Antwort: B**

### 72. Frage

An integration architect has received a request to prevent employees that leave the company from accessing data in Salesforce after they are deactivated in the company's HR system. What should the integration architect determine before recommending a solution?

- A. Data access prevention requirements, integration requirements, and system constraints
- B. Data access prevention requirements, then identify frequency
- **C. Inbound integration requirements, then identify frequency**

**Antwort: C**

### 73. Frage

Northern Trail Outfitters needs a low-code, near real-time REST integration to an ERP when an Order is created. They have limited development resources. Which option should fulfill the use case requirements?

- **A. Use Lightning Flow to create a platform event, selecting the record type as the platform event name on insert of record.**
- B. Implement a Workflow Rule with Outbound Messaging to send SOAP messages to the designated endpoint.
- C. Implement Change Data Capture on the Order object and leverage the replay ID in the middleware solution.

**Antwort: A**

Begründung:

For a team with limited development resources and a low-code requirement, Lightning Flow (Flow Builder) is the primary declarative engine for modern integrations.

In this scenario, creating a Platform Event via a record-triggered flow provides a highly scalable, near real-time "Fire-and-Forget" signal to the middleware. This is considered low-code because it can be built entirely using point-and-click tools within Salesforce. Once the Order is created, the flow publishes the event to the bus. The middleware, acting as a subscriber, receives the event and orchestrates the REST call to the ERP.

Option C (Outbound Messaging) is also a low-code tool, but it natively sends messages in SOAP format. Since the ERP requires a REST endpoint, using Outbound Messaging would necessitate additional transformation logic in the middleware, making it a less efficient architectural choice than using a Flow to trigger an event or an External Service. Option B (Change Data Capture) is a powerful tool but often requires more advanced "pro-code" configuration on the subscriber/middleware side to handle Replay IDs and Bayeux protocols, which might exceed the "limited resources" constraint of the Salesforce team.

### 74. Frage

.....

Pass4Test ist eine erstklassig Website zur Salesforce Plat-Arch-204 Zertifizierungsprüfung. Die Produkte von Pass4Test helfen denjenigen, die keine umfassenden IT-Kenntnisse besitzen, die Salesforce Plat-Arch-204 Prüfung zu bestehen. Wenn Sie die Produkte von Pass4Test in den Warenkorb schicken, würden Sie viel Zeit und Energie ersparen. Die Salesforce Plat-Arch-204 Schulungsunterlagen von Pass4Test werden von den Fachleuten tiefintensiv bearbeitet. Die allen sind von guter Qualität.
