Cisco Developing Applications using Cisco Core Platforms and APIs (DEVCOR) Sample Questions (Q122-Q127):

NEW QUESTION # 122

Refer to the exhibit above and click on the resource tabs in the top left corner to view resources to help with this question. Python code using the UCS Python SDK is creating a server pool named "devcore_pool" and populating the pool with all servers from chassis 7 and then the server pool is associated to existing service profile template "devcore_template". Drag and drop the code snippets from the left onto the item numbers on the right that match the missing sections in the python exhibit.

Refer to the above and click on the resource labs in the top left corner to view resources to help with this question.

Python code using the UCS Python SDK is creating a server pool named "devcore_pool" and populating the pool with all servers from chassis 7, and then the server pool is associated to existing Service Profile template

"devcore_template" Drag and drop the code snippets from the left onto the item numbers on the right that match the missing sections

in the Python exhibit.

☐

Answer:

Explanation:

☐

<https://phase2.github.io/devtools/common-tasks/ssh-into-a-container/>

NEW QUESTION # 124

A heterogeneous network of vendors and device types needs automating for better efficiency and to enable future automated testing. The network consists of switches, routers, firewalls and load balancers from different vendors, however they all support the NETCONF/RESTCONF configuration standards and the YAML models with every feature the business requires. The business is looking for a buy versus build solution because they cannot dedicate engineering resources, and they need configuration diff and rollback functionality from day 1.

Which configuration management for automation tooling is needed for this solution?

- A. Ansible and Terraform
- B. Ansible and NSO
- C. Terraform
- D. Ansible
- E. NSO

Answer: B

NEW QUESTION # 125

Drag and drop the code from the bottom onto the box where the code is missing in the Python script to execute a REST API call to query all the NTP policy names and print the name of each policy. Not all options are used.

☐

Answer:

Explanation:

☐
