ServiceNow Certified Implementation Specialist - Data Foundations (CMDB and CSDM) Sample Questions (Q113-Q118):

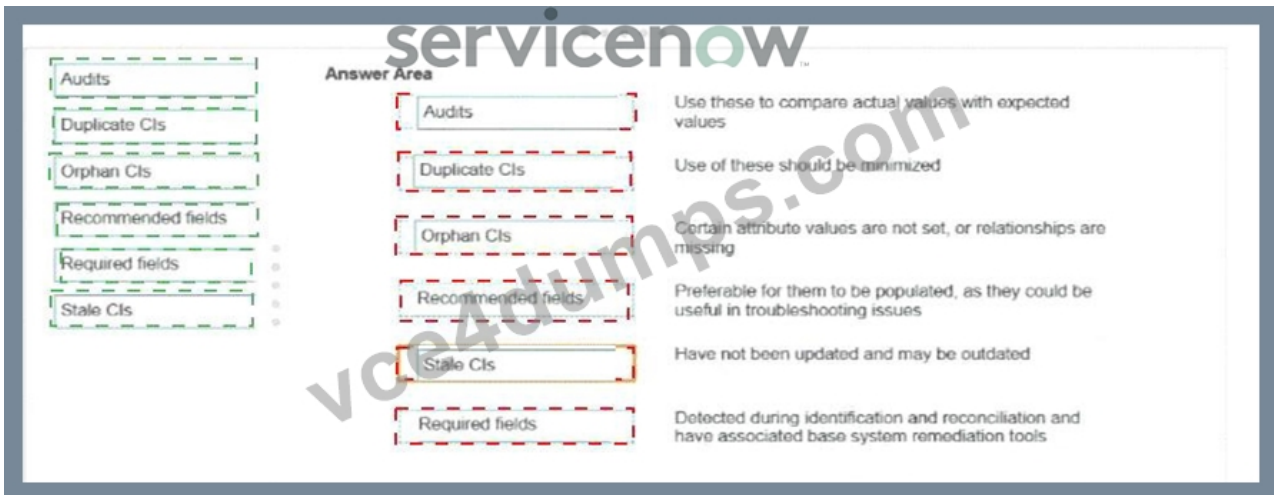

NEW QUESTION # 113

Drag and drop the CMDB Health Dashboard metric to the correct description.

	Answer Area	
Audits	<input type="text"/>	Use these to compare actual values with expected values
Duplicate CIs	<input type="text"/>	Use of these should be minimized
Orphan CIs	<input type="text"/>	Certain attribute values are not set, or relationships are missing
Recommended fields	<input type="text"/>	Preferable for them to be populated, as they could be useful in troubleshooting issues
Required fields	<input type="text"/>	Have not been updated and may be outdated
Stale CIs	<input type="text"/>	Detected during identification and reconciliation and have associated base system remediation tools

Answer:

Explanation:

Explanation:

CMDB Health Metric	Description
Audits	Use these to compare actual values with expected values
Duplicate CIs	Use of these should be minimized
Orphan CIs	Certain attribute values are not set, or relationships are missing
Recommended fields	Preferable for them to be populated, as they could be useful in troubleshooting issues
Required fields	Detected during identification and reconciliation and have associated base system remediation tools
Stale CIs	Have not been updated and may be outdated

The CMDB Health Dashboard organizes data quality into practical, action-oriented metrics:

Audits validate correctness by comparing CI values against defined expectations (rules, policies, certifications).

Duplicate CIs represent redundant records and should be reduced to improve trust and reporting accuracy.

Orphan CIs lack required relationships or key context, limiting impact analysis and service visibility.

Recommended fields are not mandatory but add diagnostic value during incidents and problem investigations.

Required fields are enforced by the platform and closely tied to Identification & Reconciliation remediation.

Stale CIs signal aging data that no longer reflects the current environment.

This mapping aligns with CMDB Data Foundations best practices and how the Health Dashboard is designed to guide prioritization and remediation.

NEW QUESTION # 114

What is the recommended way to model shared middleware supporting multiple business services?

- A. Direct CI relationships to business services
- **B. Create an Application Service representing middleware**
- C. Create a custom CI without relationships
- D. Store as an asset only

Answer: B

Explanation:

Middleware should be modeled as an Application Service to support proper service abstraction and dependency mapping.

NEW QUESTION # 115

(Choose 2 options)

Configuration Management needs to ensure data quality for all CIs in the CMDB.
What areas of data quality for CIs are included in the CMDB Health Dashboard?

- A. Stale CIs
- B. Duplicate CIs
- C. Upgraded CIs
- D. Downgraded CIs
- E. Missing CIs

Answer: A,B

Explanation:

The CMDB Health Dashboard is a central component of CMDB Data Foundations insight and governance. It measures and tracks data quality using well-defined health indicators that focus on the accuracy, relevance, and usability of CI data.

Two key data quality areas included in the dashboard are Stale CIs and Duplicate CIs.

Stale CIs (Option D) refer to configuration items that have not been updated within a defined time window.

These records are risky because they may no longer reflect the current state of the environment, leading to inaccurate impact analysis, poor change decisions, and misrouted incidents. Monitoring staleness helps organizations identify where discovery, integrations, or ownership processes are failing.

Duplicate CIs (Option E) occur when the same real-world asset or service is represented by multiple records.

Duplicates undermine trust in the CMDB, distort reporting, and break service mappings. The CMDB Health Dashboard highlights duplicate trends and integrates with de-duplication and remediation workflows to address them.

Options A (Downgraded CIs), B (Upgraded CIs), and C (Missing CIs) are not standard CMDB Health Dashboard quality dimensions. While "missing" data may be inferred through completeness checks, Missing CIs as a category is not directly tracked. Therefore, the correct answers are D - Stale CIs and E - Duplicate CIs, which are core CMDB Health indicators used to maintain high-quality configuration data.

NEW QUESTION # 116

Which are values of CMDB? (Choose 2 options)

- A. Strengthening operational resiliency
- B. Automating maintenance for CI relationships
- C. Streamlining Incident and Change Management
- D. Collecting and managing financial data

Answer: A,C

Explanation:

The CMDB is a foundational capability that enables organizations to operate IT services with confidence, resilience, and efficiency. Its value lies not in automation for its own sake or financial data management, but in how it supports service-aware operations and decision-making.

Strengthening operational resiliency (Option A) is a core value of the CMDB. By maintaining accurate configuration data and relationships, organizations can better understand dependencies, assess risk, and recover more quickly from incidents or outages. A trusted CMDB enables proactive problem management and informed change planning, directly contributing to resiliency.

Streamlining Incident and Change Management (Option B) is another primary value. Accurate CI data allows incidents to be routed automatically to the correct support groups, enables faster root-cause analysis, and supports risk-based change assessments. This reduces manual effort, improves response times, and lowers operational risk.

NEW QUESTION # 117

Drag and Drop Question

A new ServiceNow customer is assembling a Configuration Management team to support their CMDB.

Drag each role to its corresponding job description.

	Answer Area	
CI Analyst		Has read-only access to CMDB data and to basic user interface such as CMDB reports and dashboards
CMDB Process Owner		Accountable for managing all elements that make up a portfolio throughout their entire lifecycle
Configuration Manager/CMDB Admin		Manages assigned CI tables and keeps records updated and resolves tasks related to CMDB records
Service or Product Owner		Obtains highest level role for CMDB privileges
