질문 # 27
Which of the following SAP BTP components enhances enterprise data governance?

- A. SAP BusinessObjects BI
- B. SAP Concur
- C. SAP AppGyver
- D. SAP Data Intelligence

정답：D

설명：
Data governance is the practice of ensuring that data is accurate, available, and secure across an organization.
SAP Data Intelligence is the primary component within SAP BTP that addresses this need. It provides advanced metadata management and data cataloging capabilities, which are the foundations of governance. A data catalog acts like a "search engine" for enterprise data, allowing users to understand the origin (lineage), quality, and sensitivity of the information they are working with.
In a complex SAP Business Suite environment, data often moves through multiple stages and systems. SAP Data Intelligence tracks this "data lineage," showing how data was transformed as it moved from an ERP system to a reporting dashboard. This transparency is crucial for regulatory compliance (like GDPR) and for building trust in the data used for decision-making. If a financial report looks incorrect, governance tools allow IT to trace the data back to its source to find the error. By positioning Data Intelligence as the governance hub, SAP BTP ensures that the "Intelligent Enterprise" is built on a foundation of high-quality, trusted data. This is a significant differentiator from tools like SAP BusinessObjects (which focuses on reporting) or SAP Concur (which focuses on expenses), as Data Intelligence provides the underlying control layer for the entire data ecosystem.

질문 # 28
What is a key feature of SAP BTP's AI capabilities?

- A. Automated decision-making with machine learning models.
- B. Limited AI functionalities restricted to specific SAP modules.
- C. AI processing without cloud-based analytics support.
- D. Rule-based decision-making without machine learning.

정답：A

설명：
SAP BTP's approach to Artificial Intelligence is centered on the concept of "Business AI," which means AI is built specifically for business contexts and is deeply embedded within the SAP applications users use every day. A key feature of this capability is automated decision-making with machine learning (ML) models.
Unlike traditional rule-based systems that follow rigid "if-then" logic, ML models within BTP can analyze vast amounts of historical data to identify patterns and predict future outcomes. This allows the platform to provide recommendations, such as identifying the best supplier based on past performance or flagging potentially fraudulent financial transactions.
The AI Foundation on SAP BTP provides developers with ready-to-use services and tools to build, run, and manage AI-led extensions. This includes access to Large Language Models (LLMs) and specialized machine learning services that are pre-trained on business data. By positioning AI as a core component of BTP, SAP ensures that intelligence is not an afterthought but a central part of the business process. This enables a shift from reactive data entry to proactive, data-driven management. Furthermore, these AI capabilities are tightly integrated with SAP Analytics Cloud, ensuring that the insights generated by machine learning models are

immediately actionable through intuitive visualizations and dashboards, thereby driving the digital transformation of the SAP Business Suite.

질문 # 29
Which SAP BTP service helps businesses automate workflows and approval processes?

- A. SAP Workflow Management
- B. SAP Business Network
- C. SAP SuccessFactors
- D. SAP Ariba

정답： A

설명:
Automation is a key pillar of the Intelligent Enterprise, and SAP Workflow Management (now part of the broader SAP Build Process Automation suite) is the engine that drives this. This service enables businesses to digitize and automate business processes that require human intervention, such as multi-level approvals for purchase requisitions, travel requests, or HR onboarding. By moving these processes onto BTP, organizations can eliminate the "paper trail" and ensure that tasks are routed to the right people at the right time, with full auditability.
Positioning Workflow Management as a service on BTP allows for "cross-application" orchestration. For instance, a workflow could start in SAP S/4HANA with a new sales order, trigger an approval in a custom mobile app, and finally update a record in an external CRM system. This level of flexibility is difficult to achieve within a single application silo. Furthermore, the service provides visual "Low-Code" tools that allow business process owners to modify workflows as business rules change, without needing deep technical coding skills. This agility ensures that the SAP Business Suite remains responsive to organizational shifts, making SAP Workflow Management a critical tool for improving operational efficiency and reducing process cycle times across the entire enterprise.

질문 # 30
What is the primary function of SAP BTP's SAP Fiori tools?

- A. To build user-friendly applications with a consistent UI/UX experience.
- B. To deploy third-party CRM solutions.
- C. To develop backend APIs for database integration.
- D. To replace SAP S/4HANA transactional screens.

정답： A

설명:
User adoption is often the biggest hurdle in enterprise software deployment. The primary function of SAP Fiori tools on BTP is to solve this by enabling the creation of user-friendly applications with a consistent UI/UX experience. SAP Fiori is the design language for all modern SAP applications, moving away from complex, menu-heavy traditional screens toward a role-based, intuitive interface that works seamlessly across desktops, tablets, and smartphones.
On SAP BTP, Fiori tools (integrated within SAP Business Application Studio) provide templates and floorplans that help developers quickly build applications that look and behave exactly like standard SAP S
/4HANA apps. This consistency is vital for the SAP Business Suite because it reduces training time and minimizes user error. When an employee moves from an HR task in SuccessFactors to a finance task in S
/4HANA, the interface remains familiar. By positioning Fiori as the "face" of the platform, SAP ensures that the complex technical capabilities of BTP-such as AI insights or real-time data-are delivered to the end- user in a simple, actionable, and modern way, ultimately increasing productivity and employee satisfaction.

질문 # 31
Which SAP BTP product is critical for financial forecasting and analytics?

- A. SAP Business Network
- B. SAP Fieldglass
- C. SAP HANA Cloud
- D. SAP Ariba

정답：C

설명：
For financial forecasting to be effective, it requires the ability to process massive amounts of historical and real-time data with extreme speed. SAP HANA Cloud is the critical foundational product on SAP BTP that enables this. As a cloud-native, in-memory database, it allows for the convergence of transactional (OLTP) and analytical (OLAP) processing. This means that finance teams can run complex forecasting models directly on live transactional data without the need for time-consuming data transfers to separate data warehouses.
In the context of the SAP Business Suite, SAP HANA Cloud acts as the "single source of truth." It provides the high-performance data engine required by tools like SAP Analytics Cloud to perform predictive modeling and "what-if" simulations. Whether a company is predicting cash flow, modeling market volatility, or performing year-end consolidations, HANA Cloud ensures that the underlying data is accessible and processed in sub-seconds. This capability is essential for modern finance departments that must move from descriptive analytics (what happened) to predictive and prescriptive analytics (what will happen and what should we do). While Ariba and Fieldglass provide the source data for procurement and contingent labor, it is SAP HANA Cloud that provides the computational power necessary to turn that data into strategic financial insights.
