Role of Oracle 1Z0-083 Exam Questions in Getting the Highest-Paid Job

With the help of the 1Z0-083 practice exam questions and preparation material offered by PDFDumps, you can pass any 1Z0-083 certifications exam in the first attempt. You don't have to face any trouble, and you can simply choose to do a selective 1Z0-083 brain dumps to pass the exam. We offer guaranteed success with 1Z0-083 Dumps Questions on the first attempt, and you will be able to pass the 1Z0-083 exam in short time. You can always consult our 1Z0-083 certified professional support if you are facing any problems.

Oracle Database Administration II Sample Questions (Q188-Q193):

NEW QUESTION # 188

Which four are true about a Recovery Manager (RMAN) duplication without a TARGET connection? (Choose four.)

- A. The UNDO TABLESPACE clause is always required when no connection exists to the recovery catalog and the

TARGET database is closed.

- B. RMAN "pushes" the backups of the database to be duplicated over the network to the auxiliary instance.
- **C. The UNDO TABLESPACE clause is always required when no connection exists to the TARGET instance.**
- D. The NOREDO clause can be used if the backups of the database being duplicated were taken when the database was in ARCHIVELOG mode.
- **E. The NOREDO clause must be used if the backups of the database being duplicated were taken when the database was in NOARCHIVELOG mode.**
- F. RMAN SBT-based backups of the database to be duplicated can be used by the auxiliary instance.
- **G. RMAN disk-based backups of the database to be duplicated can be used by the auxiliary instance.**
- **H. The UNDO TABLESPACE clause is always required when no connection exists to the recovery catalog and the TARGET database is opened.**

Answer: C,E,G,H

NEW QUESTION # 189

How do you configure a CDB for local undo mode?

- **A. Open the CDB instance in restricted mode. In cdb\$root, drop the undo tablespace. Execute alter database local undo on in each PDB, and then restart the CDB instance.**
- B. Open the CDB instance in upgrade mode. In cdb\$root, execute alter database local undo on, and then restart the CDB instance.
- C. Open the CDB in read-only mode. In cdb\$root, execute alter database local undo on, and then change the CDB to read/write mode.
- D. Open the CDB instance in restricted mode. In cdb\$root, execute alter database local undo on. create an undo tablespace in each PDB, and then restart the CDB instance
- E. Open the CDB instance in upgrade mode. In each PDB, execute alter database local undo on, create an undo tablespace, and then restart the CDB instance.

Answer: A

NEW QUESTION # 190

Which two are true about Rapid Home Provisioning of Oracle software? (Choose two.)

- A. It can be used only for Oracle Grid Infrastructure, excluding Oracle Restart.
- **B. It can be used for applications and middleware.**
- **C. It can be used for both Oracle Database and Oracle Grid Infrastructure, including Oracle Restart.**
- D. It can be used for both Oracle Database and Oracle Grid Infrastructure, excluding Oracle Restart.
- E. It can be used only for Oracle Grid Infrastructure, including Oracle Restart.

Answer: B,C

Explanation:

<https://docs.oracle.com/en/database/oracle/oracle-database/18/cwsol/about-upgrading-grid-infrastructure-using-rhp.html#GUID-FC0B8E52-D6F4-42A8-94BF-734C95A412C7>

NEW QUESTION # 191

Which two are true about RMAN backups when using a media manager to write backups to tape when there are only two tape drives? (Choose two.)

- **A. The SBT device should be configured to use PARALLELISM 2 to allow both tape drive to be used simultaneously.**
- B. Any backup written to the SBT device in this configuration can contain a maximum of two backup sets.
- **C. SBT tape compression can be used even if no RMAN compression is configured.**
- D. Any backup set written to the SBT device in this configuration can contain a maximum of two backup pieces.
- E. SBT tape compression and RMAN backup compression should be used in parallel.

Answer: A,C
