Pass Guaranteed Quiz 2026 Juniper JN0-105: High-quality Study Junos, Associate (JNCIA-Junos) Demo

We all have same experiences that some excellent people around us further their study and never stop their pace even though they have done great job in their surrounding environment. So it is of great importance to make yourself competitive as much as possible. Facing the JN0-105 exam this time, your rooted stressful mind of the exam can be eliminated after getting help from our JN0-105 practice materials. They do not let go even the tenuous points about the JN0-105 exam as long as they are helpful and related to the exam. And let go those opaque technicalities which are useless and hard to understand, which means whether you are newbie or experienced exam candidate of this area, you can use our JN0-105 real questions with ease.

Juniper Junos, Associate (JNCIA-Junos) Sample Questions (Q88-Q93):

NEW QUESTION # 88

Which protocol would you configure to synchronize the time and date on a Junos device?

- A. SNMP
- **B. NTP**
- C. NMP
- D. RIP

Answer: B

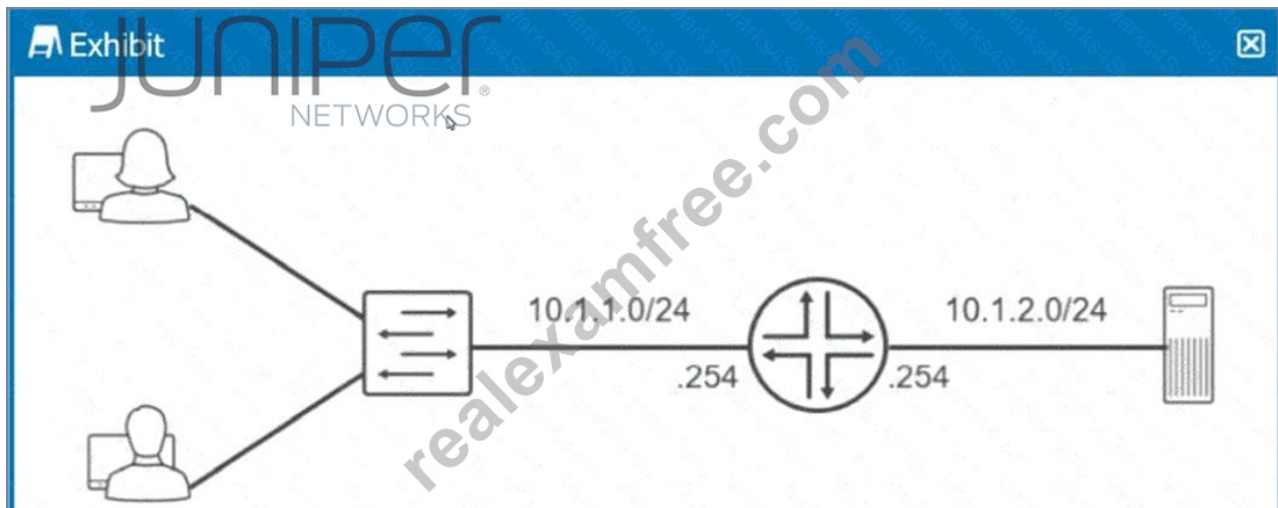

Explanation:

The Network Time Protocol (NTP) is designed to synchronize the clocks of computers over a network.

Configuring NTP on a Junos device ensures that its clock is set accurately, which is crucial for logging, troubleshooting, and maintaining the integrity of time-sensitive operations and security protocols. NTP allows devices to use a hierarchy of time sources, from primary servers synchronized to a reference clock (such as an atomic clock or GPS time) to secondary servers that distribute the time to other devices on the network.

NEW QUESTION # 89

Exhibit.

Referring to the exhibit, which routing configuration is required for these two users to access the remote server?

- **A. Users and the server require a default gateway.**
- B. Trunk ports must be enabled on the switch.
- C. A routing protocol must be enabled on the router.
- D. Users must connect directly to the router.

Answer: A

Explanation:

For the users in the 10.1.1.0/24 subnet and the server in the 10.1.2.0/24 subnet to communicate with each other, they need to route packets through the router that connects these two subnets. Each user and the server need to have their default gateway set to the IP address of the router interface on their respective subnet (.254).

This ensures that packets destined for other subnets are sent to the router, which then routes them to the correct destination subnet.

General networking principles.

NEW QUESTION # 90

Exhibit

Exhibit

[edit]

```
root# set system host-name TEST_DEVICE [edit]
```

```
root# commit
[edit]
'system'
Missing mandatory statement: 'root-authentication' error: commit failed: (missing mandatory statements)
[edit] root#
You are configuring a new device.
Which action solves the error shown in the exhibit?
```

- A. configuring a non-root username and password
- **B. configuring a password for the root account**
- C. loading the factory-default configuration
- D. reinstalling Junos

Answer: B

Explanation:

The error message in the exhibit indicates that the root-authentication statement is missing, which is mandatory for committing the configuration. In Junos OS, it is required to set a password for the root account to commit any configuration changes. This is a security measure to ensure that unauthorized users cannot access the device's configuration mode. To solve the error shown in the exhibit, configuring a password for the root account is necessary. This can be done by using the `set system root-authentication plain-text-password` command, after which the user will be prompted to enter a new password for the root account.

NEW QUESTION # 91

You are asked to configure your device running Junos OS to automatically archive your configuration upon commit. In this scenario, which two methods are supported by the Junos OS? (Choose two)

- A. FTP
- **B. RCP**
- **C. SCP**
- D. HTTP

Answer: B,C

Explanation:

Junos OS supports multiple methods for automatically archiving configurations upon commit. Two of the supported methods are SCP (Secure Copy Protocol) and RCP (Remote Copy Protocol). These methods can be configured to save the configuration files to a remote server automatically whenever a commit is made.

NEW QUESTION # 92

Which two functions are performed by the PFE? (Choose two.)

- A. It selects active routes.
- **B. It implements firewall filters.**
- **C. It forwards transit traffic.**
- D. It maintains the routing table.

Answer: B,C

Explanation:

The Packet Forwarding Engine (PFE) in Junos OS performs several key functions, including implementing firewall filters (A) and forwarding transit traffic (C). The PFE applies firewall filter rules to incoming and outgoing traffic and is responsible for the high-speed forwarding of packets based on the information in the forwarding table.

NEW QUESTION # 93

.....

The Juniper JN0-105 certification brings multiple career benefits. Reputed firms happily hire you for good jobs when you earn the Junos, Associate (JNCIA-Junos) JN0-105 certificate. If you are already an employee of a tech company, you get promotions and

salary hikes upon getting the Junos, Associate (JNCIA-Junos) JN0-105. All these career benefits come when you crack the Junos, Associate (JNCIA-Junos) JN0-105 Certification examination. To pass the Junos, Associate (JNCIA-Junos) JN0-105 test, you need to prepare well from updated practice material such as real Juniper JN0-105 Dumps. We guarantee that this study material will prove enough to prepare successfully for the JN0-105 examination.
