The name of these formats are FCSS - FortiSASE 25 Administrator (FCSS_SASE_AD-25) PDF dumps file, desktop practice test software, and web-based practice test software. All these three FCSS - FortiSASE 25 Administrator (FCSS_SASE_AD-25) practice test formats are easy to use and perfectly work with all devices, operating systems, and web browsers. The FCSS_SASE_AD-25 PDF dumps file is a simple collection of Real and Updated FCSS_SASE_AD-25 Exam Questions in PDF format and it is easy to install and use. Just install the FCSS - FortiSASE 25 Administrator (FCSS_SASE_AD-25) PDF dumps file on your desktop computer, laptop, tab, or even on your smartphone and start FCSS - FortiSASE 25 Administrator (FCSS_SASE_AD-25) exam preparation anytime and anywhere.

Fortinet FCSS_SASE_AD-25 Exam Syllabus Topics:

Topic	Details

Topic 1	<ul style="list-style-type: none"> Advanced FortiSASE Solutions: This section of the exam measures the expertise of Solution Architects and validates the ability to work with advanced FortiSASE features. It covers deployment of SD-WAN using FortiSASE, implementation of Zero Trust Network Access (ZTNA), and the overall role of FortiSASE in optimizing enterprise connectivity. The section highlights how these advanced solutions improve flexibility, enforce zero-trust principles, and extend security controls across distributed networks and cloud systems.
Topic 2	<ul style="list-style-type: none"> SASE Architecture and Components: This section of the exam measures the skills of Network Engineers and introduces the fundamentals of SASE within enterprise environments. Candidates are expected to understand the SASE architecture, identify FortiSASE components, and build deployment cases for real-world scenarios. The content emphasizes how SASE can be integrated into a hybrid network, showcasing secure design principles and the use of FortiSASE capabilities to support business and security objectives.
Topic 3	<ul style="list-style-type: none"> Analytics and Monitoring: This section of the exam measures the skills of Security Analysts and emphasizes the monitoring and reporting aspects of FortiSASE. Candidates are expected to configure dashboards, logging settings, and analyze reports for user traffic and security issues. Additionally, they must use FortiSASE logs to identify potential threats and provide insights into incidents or abnormal behavior. The focus is on leveraging analytics for operational visibility and strengthening the organization's security posture.
Topic 4	<ul style="list-style-type: none"> SASE Deployment: This section of the exam measures the knowledge of Implementation Consultants and focuses on the practical aspects of deploying FortiSASE. Candidates will explore user onboarding methods, configuration of administration settings, and the application of security posture checks with compliance rules. The exam also includes key functions such as SIA, SSA, and SPA, alongside the design of security profiles that perform effective content inspection. By combining these tasks, learners demonstrate readiness to roll out secure and scalable deployments.

Unique Features of PassLeader's Fortinet FCSS_SASE_AD-25 Practice Test (Desktop and Web-Based)

Wondering where you can find the perfect materials for the exam? Don't leave your fate depending on thick books about the FCSS_SASE_AD-25 exam. Our authoritative FCSS_SASE_AD-25 study materials are licensed products. Whether newbie or experienced exam candidates you will be eager to have our FCSS_SASE_AD-25 Exam Questions. And they all made huge advancement after using them. Not only that you will get the certification, but also you will have more chances to get higher incomes and better career.

Fortinet FCSS - FortiSASE 25 Administrator Sample Questions (Q15-Q20):

NEW QUESTION # 15

What are two advantages of using zero-trust tags? (Choose two.)

- A. Zero-trust tags can determine the security posture of an endpoint.
- B. Zero-trust tags can be used to allow or deny access to network resources.
- C. Zero-trust tags can be assigned to endpoint profiles based on user groups.
- D. Zero-trust tags can help monitor endpoint system resource usage.

Answer: A,B

Explanation:

Zero-trust tags assess endpoint compliance based on defined posture rules and are used in access policies to control whether a device is permitted or denied access to specific network resources.

NEW QUESTION # 16

Which information can an administrator monitor using reports generated on FortiSASE?

- A. SD-WAN performance
- B. FortiSASE administrator and system events
- C. FortiClient vulnerability assessment
- **D. sanctioned and unsanctioned Software-as-a-Service (SaaS) applications usage**

Answer: D

Explanation:

FortiSASE reporting provides visibility into the usage of sanctioned and unsanctioned SaaS applications, enabling administrators to monitor cloud application activity and enforce security policies.

NEW QUESTION # 17

Refer to the exhibits.

Jumpbox and Windows-AD are endpoints from the same remote location. Jumpbox can access the internet through FortiSASE, while Windows-AD can no longer access the internet.

Based on the information in the exhibits, which reason explains the outage on Windows-AD?

- **A. The device posture for Windows-AD has changed.**
- B. Windows-AD is excluded from FortiSASE management.
- C. The FortiClient version installed on Windows AD does not match the expected version on FortiSASE.
- D. The remote VPN user on Windows-AD no longer matches any VPN policy.

Answer: A

Explanation:

The Windows-AD endpoint now has both "FortiSASE-Compliant" and "FortiSASE-Non-Compliant" tags due to failing the antivirus software check. As a result, the Secure Internet Access Policy matches the "Non-Compliant" rule, which is set to Deny, causing the device to lose internet access.

NEW QUESTION # 18

Refer to the exhibits.

A FortiSASE administrator has configured an antivirus profile in the security profile group and applied it to the internet access policy. Remote users are still able to download the eicar.com.zip file from <https://eicar.org>.

Which configuration on FortiSASE is allowing users to perform the download?

- A. Application control is exempting all the browser traffic.
- **B. Deep inspection is not enabled.**
- C. Web filter is allowing the URL.
- D. Intrusion prevention is disabled.

Answer: B

Explanation:

The SSL inspection mode is set to certificate inspection, which only inspects SSL/TLS headers and does not allow full scanning of encrypted content. Without full (deep) inspection, the antivirus profile cannot scan or block malicious files (like eicar.com.zip) delivered over HTTPS, allowing the download to proceed.

NEW QUESTION # 19

Your organization is currently using FortiSASE for its cybersecurity. They have recently hired a contractor who will work from the HQ office and who needs temporary internet access in order to set up a web-based point of sale (POS) system.

What is the recommended way to provide internet access to the contractor?

- A. Configure a VPN policy on FortiSASE to provide access to the internet.
- **B. Use zero trust network access (ZTNA) and tag the client as an unmanaged endpoint.**
- C. Use FortiClient on the endpoint to manage internet access.
- D. Use a proxy auto-configuration (PAC) file and provide secure web gateway (SWG) service as an explicit web proxy.

Answer: B

Explanation:

The recommended way to provide temporary internet access to the contractor is to use Zero Trust Network Access (ZTNA) and tag the client as an unmanaged endpoint. ZTNA ensures that only authorized users and devices can access specific resources, while treating all endpoints as untrusted by default. By tagging the contractor's device as an unmanaged endpoint, you can apply strict access controls and ensure that the contractor has limited access to only the necessary resources (e.g., the web-based POS system) without exposing the internal network to unnecessary risks.

Here's why the other options are less suitable:

A. Use FortiClient on the endpoint to manage internet access: While FortiClient provides endpoint security and management, it requires installation and configuration on the contractor's device. This may not be feasible for temporary contractors or unmanaged devices.

B. Use a proxy auto-configuration (PAC) file and provide secure web gateway (SWG) service as an explicit web proxy: While this approach can control web traffic, it does not provide the granular access control and security posture validation offered by ZTNA. Additionally, managing PAC files can be cumbersome and less secure compared to ZTNA.

D. Configure a VPN policy on FortiSASE to provide access to the internet: Using a VPN policy would grant broader access to the network, which is not ideal for a temporary contractor. It increases the risk of unauthorized access to internal resources and does not align with the principle of least privilege.
