All kinds of the test Professional-Cloud-Architect certification, prove you through all kinds of qualification certificate, it is not hard to find, more and more people are willing to invest time and effort on the Professional-Cloud-Architect Exam Guide, because get the test Professional-Cloud-Architect certification is not an easy thing, so, a lot of people are looking for an efficient learning method. And here, fortunately, you have found the Professional-Cloud-Architect exam braindumps, a learning platform that can bring you unexpected experiences.

Exam Details

The Google Professional Cloud Architect test is timed. The exact number of questions has not been revealed by the vendor. But, it is known that candidates will be given 2 hours to complete the exam, and the questions will be based on multiple-choice and multiple select types. Available languages are English and Japanese, and one should pay \$200 as a registration fee. Note that there can be an additional tax.

When it comes to the exam delivery formats, there are two choices for an aspirant. They can either sit for it in a testing center near them or can avail of the online proctoring facility. In both methods, the content and pattern of the test will be the same.

For this exam, a beta version is offered as well. Anyone who wants to save 40% on the total fee or willing to recertify can take it. The cost in this case is \$120, the length increases to 3 hours, and some questions may be provided in the form of case studies. Also, pay attention to the fact that the results will be known after 6-8 weeks only.

Google Professional-Cloud-Architect certification is a valuable certification for professionals who are responsible for designing, developing, and managing solutions using Google Cloud technologies. Google Certified Professional - Cloud Architect (GCP) certification validates the skills of an individual in designing solutions that are highly available, scalable, and secure. Google Certified Professional - Cloud Architect (GCP) certification is highly valued in the industry and is recognized by many organizations as a standard for cloud architects.

The Google Professional-Cloud-Architect Exam is intended for cloud architects, solution architects, and other IT professionals who are responsible for designing and implementing cloud-based solutions using GCP. Google Certified Professional - Cloud Architect (GCP) certification exam tests candidates on their knowledge of GCP services, such as Compute Engine, Kubernetes Engine, Cloud Storage, and BigQuery, among others. Candidates are also tested on their ability to design and optimize GCP architectures, implement security and compliance measures, and manage GCP operations.

Google Certified Professional - Cloud Architect (GCP) Sample Questions (Q51-Q56):

NEW QUESTION # 51

Your organization wants to control IAM policies for different departments independently, but centrally. Which approach should you take?

- A. Multiple Organizations with multiple Folders
- B. Multiple Organizations, one for each department
- C. A single Organization with Folder for each department
- D. A single Organization with multiple projects, each with a central owner

Answer: C

Explanation:

Folders are nodes in the Cloud Platform Resource Hierarchy. A folder can contain projects, other folders, or a combination of both. You can use folders to group projects under an organization in a hierarchy. For example, your organization might contain multiple departments, each with its own set of GCP resources. Folders allow you to group these resources on a per-department basis. Folders are used to group resources that share common IAM policies. While a folder can contain multiple folders or resources, a given folder or resource can have exactly one parent.

NEW QUESTION # 52

Mountkirk Games has deployed their new backend on Google Cloud Platform (GCP). You want to create a through testing process for new versions of the backend before they are released to the public. You want the testing environment to scale in an economical way. How should you design the process?

- A. Create a scalable environment in GCP for simulating production load
- B. Build stress tests into each component of your application using resources internal to GCP to simulate load
- C. Create a set of static environments in GCP to test different levels of load - for example, high, medium, and low
- D. Use the existing infrastructure to test the GCP-based backend at scale

Answer: A

Explanation:

Explanation/Reference:

Explanation:

From scenario: Requirements for Game Backend Platform

1. Dynamically scale up or down based on game activity
2. Connect to a managed NoSQL database service
3. Run customize Linux distro

NEW QUESTION # 53

You are creating a solution to remove backup files older than 90 days from your backup Cloud Storage bucket. You want to optimize ongoing Cloud Storage spend. What should you do?

- A. Schedule a cron script using `gsutil ls -lr gs://backups/**` to find and remove items older than 90 days.
- B. Schedule a cron script using `gsutil ls -l gs://backups/**` to find and remove items older than 90 days and schedule it with cron.

- C. Write a lifecycle management rule in XML and push it to the bucket with gsutil.
- **D. Write a lifecycle management rule in JSON and push it to the bucket with gsutil.**

Answer: D

Explanation:
