Top Features of Fortinet NSE7_SSE_AD-25 PDF Dumps And Practice Test Software

There are three versions of Fortinet NSE 7 - FortiSASE 25 Enterprise Administrator test torrent—PDF, software on pc, and app online, the most distinctive of which is that you can install NSE7_SSE_AD-25 test answers on your computer to simulate the real exam environment, without limiting the number of computers installed. Through a large number of simulation tests, you can rationally arrange your own NSE7_SSE_AD-25 exam time, adjust your mentality in the examination room, find your own weak points and carry out targeted exercises. But I am so sorry to say that NSE7_SSE_AD-25 Test Answers can only run on Windows operating systems and our engineers are stepping up to improve this. In fact, many people only spent 20-30 hours practicing our NSE7_SSE_AD-25 guide torrent and passed the exam. This sounds incredible, but we did, helping them save a lot of time.

- B. FortiClient quarantines only infected files that FortiSandbox detects as medium level.
- **C. All files executed on a USB drive will be sent to FortiSandbox for analysis.**
- D. All files will be sent to an on-premises FortiSandbox for inspection.

Answer: A,C

Explanation:

The exhibit (image_595357.jpg) illustrates the Sandbox configuration tab within a FortiSASE Endpoint Profile. This profile dictates how the managed FortiClient agent handles suspicious files and interacts with the sandbox service.

* Profile-Based Enforcement: In the FortiSASE architecture, security features are not applied globally by default; they are enabled through specific profiles assigned to endpoints. Therefore, the sandbox inspection and remediation logic will only be active for endpoints that have been assigned a profile where the Sandbox feature is enabled.

* Removable Media Protection: Under the File Submission Options in the exhibit, the setting All Files Executed from Removable Media is toggled on. This ensures that any file executed from a USB drive or other external storage is sent to the FortiSandbox for analysis before being permitted to run on the endpoint.

* Sandbox Mode: The Sandbox Mode is set to FortiSASE, indicating that files are sent to the integrated cloud-native sandbox rather than an on-premises appliance. This makes Option A incorrect.

* Quarantine Threshold: The Remediation Actions show that the Action is set to Quarantine for files meeting the Sandbox Detection Verdict Level of Medium. This acts as a minimum threshold; FortiClient will quarantine files identified as Medium, High, or Malicious. Option B is incorrect because it implies only medium-level files are quarantined, whereas higher-risk levels would also be blocked.

NEW QUESTION # 64

Which service is included in a secure access service edge (SASE) solution, but not in a security service edge (SSE) solution?

- **A. SD-WAN**
- B. CASB
- C. SWG
- D. ZTNA

Answer: A

Explanation:

SD-WAN is a networking component included in a SASE solution but not in an SSE solution. SSE focuses solely on security services (like ZTNA, SWG, and CASB), while SASE combines both networking (e.g., SD-WAN) and security into a unified cloud-delivered service.
