On PassCollection website you can free download part of the exam questions and answers about ISACA Certification CDPSE Exam to quiz our reliability. PassCollection's products can 100% put you onto a success away, then the pinnacle of IT is a step closer to you.

ISACA Certified Data Privacy Solutions Engineer Sample Questions (Q83-Q88):

NEW QUESTION # 83

An organization is creating a personal data processing register to document actions taken with personal data. Which of the following categories should document controls relating to periods of retention for personal data?

- A. Data input
- **B. Data archiving**
- C. Data acquisition
- D. Data storage

Answer: B

Explanation:
Explanation

However, the risks associated with long-term retention have compelled organizations to consider alternatives; one is data archival, the process of preparing data for long-term storage. When organizations are bound by specific laws to retain data for many years, archival provides a viable opportunity to remove data from online transaction systems to other systems or media.

Data archiving is the process of moving data that is no longer actively used to a separate storage device for long-term retention. Data archiving helps to reduce the cost and complexity of data storage, improve the performance and availability of data systems, and comply with data retention policies and regulations. Data archiving should document controls relating to periods of retention for personal data, such as the criteria for determining the retention period, the procedures for deleting or anonymizing data after the retention period expires, and the mechanisms for ensuring the integrity and security of archived data. NEW QUESTION # 84

Which of the following principles is MOST important to apply when granting access to an enterprise resource planning (ERP) system that contains a significant amount of personal data?

- A. Read-only access
- B. Segregation of duties
- C. Least privilege
- D. Data minimization

Answer: C

Explanation:

The principle of least privilege is the most important principle to apply when granting access to an ERP system that contains a significant amount of personal data. The principle of least privilege states that users should only have the minimum level of access and permissions necessary to perform their legitimate tasks and functions, and no more. Applying the principle of least privilege helps to protect the privacy and security of the personal data in the ERP system, as it reduces the risk of unauthorized or inappropriate access, disclosure, modification, or deletion of the data. It also helps to comply with the privacy laws and regulations, such as the GDPR, that require data controllers and processors to implement appropriate technical and organizational measures to ensure a level of security appropriate to the risk.

NEW QUESTION # 85

A technology company has just launched a mobile application for tracking health symptoms. This application is built on a mobile device technology stack that allows users to share their location and details of their symptoms. Which of the following is the GREATEST privacy concern with collecting this data via mobile devices?

- A. Data storage requirements
- B. Encryption of key data elements
- C. Data usage without consent
- D. Client-side device ID

Answer: C

NEW QUESTION # 86

What is the BEST method to protect customers' personal data that is forwarded to a central system for analysis?

- A. Anonymization
- B. Encryption
- C. Pseudonymization
- D. Deletion

Answer: C

Explanation:

Pseudonymization is a technique that replaces direct identifiers in a data set with pseudonyms or artificial identifiers that do not reveal the identity of the data subjects. Pseudonymization is the best method to protect customers' personal data that is forwarded to a central system for analysis, as it reduces the linkability of the data set with the original identity of the customers and thus enhances the privacy and security of the data. Pseudonymization also preserves some characteristics or patterns of the original data that can be used for analysis or research purposes, without compromising the accuracy or quality of the results. The other options are not as

effective as pseudonymization in protecting customers' personal data that is forwarded to a central system for analysis. Deletion is a technique that removes or destroys data from a storage device or media to prevent unauthorized access or recovery of the data, but it does not allow for any analysis or research purposes. Encryption is a technique that transforms plain text data into cipher text using an algorithm and a key, making it unreadable by unauthorized parties, but it does not reduce the linkability of the data set with the original identity of the customers and may require additional security measures to protect the encryption keys or certificates. Anonymization is a technique that removes or modifies all identifiers in a data set to prevent or limit the identification of the data subjects, but it may affect the accuracy or quality of the analysis or research results, as some characteristics or patterns of the original data may be lost or distorted¹, p. 74-75 Reference: 1: CDPSE Review Manual (Digital Version)

NEW QUESTION # 87

What type of personal information can be collected by a mobile application without consent?

- A. Geolocation
- B. Phone number
- C. Full name
- D. Accelerometer data

Answer: D

Explanation:

Reference:

Accelerometer data is a type of personal information that can be collected by a mobile application without consent, according to some studies and reports. Accelerometer data measures the movement and orientation of the device, and can be used for various purposes, such as fitness tracking, gaming, navigation, and authentication. However, accelerometer data can also reveal sensitive information about the user's behavior, activity, location, and identity, without their knowledge or permission. For example, some researchers have shown that accelerometer data can be used to infer the user's gender, age, health condition, personality traits, and even passwords. Therefore, accelerometer data poses a significant privacy risk for mobile users, and there is a lack of clear and consistent regulations and guidelines on how to collect, use, and protect this type of data.

NEW QUESTION # 88

.....

Now passing CDPSE exam is not easy, so choosing a good training tool is a guarantee of success to get the CDPSE certificate. If you choose our CDPSE exam materials, we will free update within one year after you purchase. That is to say we can ensure that we will provide you with exam information and exam practice questions and answers immediately. It can let you be fully prepared for exam, and almost have 100% pass rate of CDPSE Exam. We can not only allow you for the first time to participate in CDPSE exam to pass it successfully, but also help you save a lot of valuable. Don't miss such a good opportunity because of your hesitation.
