

PDD Valid Test Test, PDD Real Dumps Free

1. A backup administrator is tasked with monitoring PowerProtect DD capacity metrics. The administrator is backing up 4 TB of data daily with a reduction rate at 5x. After data reduction, subsequent full backups compress down to 200 GB. The initial backup requires 800 GB with a 10 percent increase in the data each day. Incremental backups are 400 GB. After data reduction, each incremental backup is 40 GB.

What is the weekly burn rate (GB) after four daily incremental backups and one weekly backup?

- A. 220
- B. 260
- C. 400
- D. 440

Answer: B

2. A backup administrator is tasked with monitoring changes in space availability and compression in relation to the cleaning process on the PowerProtect DD system. Which chart in DDSM is used specifically to identify these trends?

- A. Pre-Comp Used
- B. Consumption
- C. Space Usage
- D. Daily Written

Answer: D

3. What is a characteristic of PowerProtect DD remote logging?

- A. CLI command for remote logging is log watch
- B. The basic CLI command for remote logging is log host
- C. Must be enabled and verified through System Manager
- D. Communicates only through TCP ports

Answer: B

4. Which of the following protocols are supported by PowerProtect DD for data movement to a cloud provider?

- A. FTP and FTPS
- B. VTL and DD Boost
- C. CIFS and NFS
- D. HTTP and HTTPS

Answer: D

5. An administrator is migrating their old cloud tier-enabled Data Domain to a new

The passing rate of our PDD exam materials are very high and about 99% and so usually the client will pass the PDD exam successfully. If any questions or doubts on the PDD training material exist, the client can contact our online customer service or send mails to contact us and we will solve them as quickly as we can. We always want to let the clients be satisfied and provide the best PDD Test Torrent and won't waste their money and energy. As long as you bought our PDD practice guide, you will love it for sure.

As one of the most professional dealer of PDD practice questions, we have connection with all academic institutions in this line with proficient researchers of the knowledge related with the PDD exam materials to meet your tastes and needs, please feel free to choose. And we have three versions of PDD training guide: the PDF, Software and APP online for you. You can choose the one which you like best.

Updated PDD Valid Test Test & Leader in Qualification Exams & Newest PDD: ARE 5.0 Project Development and Documentation Exam

TestPDF offers authentic and actual PDD dumps that every candidate can rely on for good preparation. Our top priority is to give you the most reliable prep material that helps you pass the PDD Exam on the first attempt. In addition, we offer up to three months

of free ARE 5.0 Project Development and Documentation Exam questions updates.

NCARB ARE 5.0 Project Development and Documentation Exam Sample Questions (Q24-Q29):

NEW QUESTION # 24

During an analysis of an existing sanitary sewer crossing a proposed building site, it was determined that the outflow invert at one manhole was 120 feet and the inflow invert at the next manhole, which is 200 feet downstream, was 117 feet.

What is the percentage of slope between the two manholes?

- A. 2%
- B. 3%
- C. 1.5%

Answer: C

Explanation:

Sanitary sewer design principles and slope requirements

NEW QUESTION # 25

In which of the following locations in concrete masonry should a control joint be placed?

- A. In the center of window openings
- B. At changes in wall height
- C. At the first course of masonry walls
- D. At each corner of the foundation wall

Answer: B

Explanation:

Control joints in concrete masonry walls are designed to accommodate movement caused by thermal expansion, moisture changes, and settlement.

Control joints should be placed at locations of stress concentration, such as changes in wall height, changes in wall thickness, or at large wall expanses.

They are not placed at the first course of masonry (which is typically reinforced and anchored to the foundation).

They are generally not placed at window corners or in the center of window openings but rather at planned intervals or changes in geometry.

Placing a control joint at changes in wall height allows movement without cracking.

NEW QUESTION # 26

Owners of a busy two-story theater complex want to renovate. The new renovations include increasing the second floor lobby and doubling the number of second floor movie screens. The owner favors the use of escalators. Movies are scheduled to start simultaneously every three hours. The theater currently has a pair of 24-inch-wide parallel escalators, one of which goes up and the other down.

Which of the following should be proposed to accommodate the increased traffic to the second floor?

- A. Install a new escalator that reverses direction
- B. Extend balustrades at escalator landings
- C. Install a new elevator in the lobby
- D. Increase the existing escalator speeds to 130 fpm

Answer: A

Explanation:

Given:

The theater doubles its second-floor movie screens, increasing patron traffic.

Existing escalators are two 24-inch wide units, one up and one down, with simultaneous movie start times every 3 hours.

To handle increased traffic:

Increasing existing escalator speed to 130 fpm (option A) is limited by safety and code limits (typically max around 100 fpm); also increases wear.

Installing a new elevator (option B) is helpful for accessibility but does not efficiently handle high flow of large crowds during peak.

Installing a new escalator that reverses direction (option C) (also called a "dance" or "two-way" escalator) allows flexibility to accommodate peak traffic flow-e.g., two escalators up during rush times and one down, or vice versa.

Extending balustrades (option D) improves safety but does not increase capacity.

Therefore, option C is the best solution to manage increased passenger flow.

NEW QUESTION # 27

Refer to the exhibit.

In the diagram shown, what is the purpose of the pressure relief valve?

- A. Vent the tank of accumulated air
- B. Regulate water pressure fluctuation
- C. Relieve negative pressure when draining the tank
- D. Allow for thermal expansion of water

Answer: D

Explanation:

Understanding the Diagram

The diagram shows a water heater (WH) with labeled connections and valves.

Item 2 is the ASME pressure relief valve, piped to 6 inches above the finished floor.

Purpose of the Pressure Relief Valve in a Water Heater

* When water is heated, it expands.

* In a closed plumbing system, this expansion increases pressure inside the water heater tank.

* If the pressure rises above a safe limit, it can damage the heater, piping, or even cause an explosion.

* The temperature and pressure relief valve (T&P valve) automatically opens to discharge water when pressure or temperature exceeds safe limits, relieving the pressure caused by thermal expansion.

Why Other Options Are Incorrect:

* A. Regulate water pressure fluctuation - Pressure regulation is done by a pressure-reducing valve, not a relief valve.

* B. Vent the tank of accumulated air - Air elimination is done with air vents or bleeders, not the T&P valve.

* D. Relieve negative pressure when draining the tank - Negative pressure prevention uses vacuum relief valves, not T&P valves.

NCARB ARE 5.0 PDD Study Guide References:

* Content Area: Plumbing Systems - Equipment and Safety Components

* Source References:

* Plumbing Engineering Design Handbook - Water Heater Safety Devices

* Architectural Graphic Standards - Water Heater Installation Details

* MEEB (Mechanical and Electrical Equipment for Buildings) - Plumbing Chapter: Safety valves in hot water systems

* Code Reference:

* International Plumbing Code (IPC) Section 504.6 - T&P relief valve requirements for water heaters Key Point:

The ASME-rated relief valve's main role is to protect the water heater and piping by relieving excessive pressure due to water expansion from heating.

NEW QUESTION # 28

Refer to the exhibit.

For which of the following connections could diagonal bracing be eliminated?

- A. A
- B. C

- C. D
- D. B

Answer: A

Explanation:

The diagrams depict metal stud or curtain wall connections to structural frames under wind loading. Diagonal bracing can be eliminated when the connection itself provides lateral restraint in both directions.

A: Shows a connection with angles or plates attached to resist both in-plane and out-of-plane forces, creating a moment-resisting connection that can handle wind loads without diagonal bracing.

B, C, D: These connections allow slip or have limited fixity-requiring separate bracing to resist lateral loads.
