Our professional online service are pleased to give guide in 24 hours.

Salesforce Accredited B2B Commerce Developer Sample Questions (Q108-Q113):

NEW QUESTION # 108

Which category can receive signaling from a Lightning Message Channel?

- A. page (anywhere on it)
- B. only direct siblings
- C. only descendents (i.e. children)
- D. only ancestors (i.e. parents)

Answer: A

Explanation:

A Lightning Message Channel can receive signaling from any component on a page (anywhere on it). A Lightning Message Channel is a service that allows components to communicate with each other across different Salesforce UI technologies, such as Aura, LWC, Visualforce, and Lightning web apps. A component can subscribe to a message channel and receive events that are published by another component on the same or different page. The message channel acts as a mediator that delivers the events to the subscribers. A Lightning Message Channel does not receive signaling only from descendants (i.e., children), only from direct siblings, or only from ancestors (i.e., parents), as these are limitations of event-based communication. Salesforce Reference: [Lightning Web Components Developer Guide: Communicate Across Salesforce UI Technologies], [Lightning Web Components Developer Guide: Communicate with Events]

NEW QUESTION # 109

How does a project implement the process to persist payment information data in the Checkout flow for Salesforce B2B Commerce version 4.2 and beyond?

- A. Trigger the processPayment event and pass in the payment information object as an argument.
- B. Trigger the externalProcessedPayment and pass in the payment information object as an argument.
- C. Trigger a remote action when the process payment button is selected to capture the payment.
- D. Trigger a remote action to store the payment information in the URL query parameters.

Answer: A

Explanation:

To persist payment information data in the Checkout flow for Salesforce B2B Commerce version 4.2 and beyond, the project needs to trigger the processPayment event and pass in the payment information object as an argument. This event will invoke the processPayment method of the ccServicePayment class, which will validate and process the payment information and return a payment result object. The payment result object will contain the status and details of the payment transaction.

NEW QUESTION # 110

The ccrz.cc_hk_UserInterface apex class, HTMLHead Include Begin and HTML Head Include End Cloudcraze Page Include sections allow additional content to be added to the HTML <head> tag. What are two reasons that it is preferred to use the ccrz.cc_hk_UserInterface extension over the Cloudcraze Page Include sections? (2 answers)

- A. HTML does not support <div> tags inside the <head>
- B. HTML does not support tags inside the <head>
- C. Salesforce apex:include is wrapped in tags.
- D. Salesforce apex:include is wrapped in tags.

Answer: B,D

Explanation:

The ccrz.cc_hk_UserInterface apex class is preferred over the HTMLHead Include Begin and HTML Head Include End Cloudcraze Page Include sections because Salesforce apex:include is wrapped in tags, which are not valid inside the HTML <head> tag. This can cause rendering issues or unexpected behavior in some browsers. The ccrz.cc_hk_UserInterface extension allows adding content to the HTML <head> tag without using apex:include.

NEW QUESTION # 111

Which event should be triggered when user facing info, warning or error messages need to be displayed on a Visualforce page?

- A. showMessage
- B. displayPageMessage
- C. pageMessage
- D. displayMessage

Answer: C

NEW QUESTION # 112

What are two ways a developer should ensure that a store verifies changes by using an external service?

- A. Create an Apex class implementing the `sfdc_checkout.CartShippingCharges` interface to retrieve shipping charges from an external service and register it as the .. calculation integration in the store administration.
- B. Create a trigger to retrieve shipping charges from an external service and update the Cart Delivery, Group Methods
- C. Create a flow using an action to retrieve shipping charges from an external service and update the Cart Delivery Group Methods.
- D. Create an Apex class to retrieve shipping charges from an external service and update the Cart Delivery Group Method.

Answer: A,D

Explanation:

To verify changes by using an external service, a developer can use either of these two ways:

- * Create an Apex class that implements the `sfdc_checkout.CartShippingCharges` interface and defines the `getShippingCharges` method. This method takes a Cart object as an input parameter and returns a list of `CartDeliveryGroupMethod` objects with the updated shipping charges. The developer then needs to register the Apex class as the Shipping Calculation Integration in the store administration. This way, the store can call the external service to calculate the shipping charges for each delivery group in the cart.
- * Create an Apex class that defines a method to retrieve the shipping charges from an external service and update the Cart Delivery Group Method object. The developer then needs to invoke this method from a trigger on the Cart Delivery Group Method object. This way, the store can update the shipping charges whenever the delivery group method is inserted or updated.

The other options are not valid ways to verify changes by using an external service. Creating a flow using an action is not supported for B2B Commerce, and creating a trigger on the Cart Delivery Group object will not update the shipping charges for each delivery group method. References:

- * Integrate with External Services
- * `CartShippingCharges` Interface
- * `CartDeliveryGroupMethod` Object

NEW QUESTION # 113

.....

B2B-Commerce-Developer training materials are famous for high quality, and we have received many good feedbacks from our customers. B2B-Commerce-Developer exam materials are compiled by skilled professionals, and they possess the professional knowledge for the exam, therefore, you can use them at ease. In addition, B2B-Commerce-Developer training materials contain both questions and answers, and it's convenient for you to have a check after practicing. You can receive download link and password within ten minutes after paying for B2B-Commerce-Developer Exam Braindumps, it's convenient.
