- B. The last created date of the flow will determine the order.
- C. The flows will execute in alphabetical order based on their names.
- D. The order of flow execution is unpredictable.

When you have multiple record-triggered flows that are configured to run before the record is saved on the same object, the order of flow execution is unpredictable. Therefore, you should avoid creating multiple before-save flows on the same object and instead consolidate them into one flow if possible.
