- A. Data Leak Prevention (DLP) archive, Quarantine, and IPS (Intrusion Protection System) Packets.
- B. Traffic/Event, Data Leak Prevention (DLP) archive, Quarantine, and IPS (Intrusion Protection System) Packets.
- C. Traffic/Event/Security, Data Leak Prevention (DLP) archive, Quarantine, and IPS (Intrusion Protection System) Packets.
- D. Traffic/Event/Security, Data Leak Prevention (DLP) archive, Quarantine.

Answer: C

NEW QUESTION # 42

What are two advantages of setting up fabric ADOM? (Choose two.)

- A. It can include all Fortinet devices that are part of the same Security Fabric
- B. It can include only FortiGate devices that are part of the same Security Fabric
- C. It can be used for fast data processing and log correlation
- D. It can be used to facilitate communication between devices in same Security Fabric

Answer: A,C

NEW QUESTION # 43

What is the main purpose of deploying RAID with FortiAnalyzer?

- A. To make an identical copy of log data on two separate physical drives
- B. To provide redundancy of your log data
- C. To store data in chunks across multiple drives
- D. To back up your logs

Answer: B

NEW QUESTION # 44

Refer to the exhibit with partial output:

```
[{"checksum": {"hash": "c7e559a2e328cab00b7aaac1cccc1ca", "method": "MD5"}, "data": "H4sIAAAAAAAAA7ZbN/0KPAv9+vETz7sAvQqd7RFmA/uHbaBmI2M185qbff178pb6t0u1hkYVt2QyMMPfh6OkP07eh/0qTb/RTymkRR11j1D5uPQ7140tD7+7m1+n97OH3rko5du1yN5rmCTMzWnf1n15-0u.../pub/KPQqeScCVCcgDgmv4hC9T14EbcnNAYnumbvrevh5W.../Tc1Tc2ZPmCkc1PxNfcbVh1X31hs50Lw37e3c2"}
```

Your colleague exported a playbook and has sent it to you for review. You open the file in a text editor and observe the output as shown in the exhibit.

Which statement about the export is true?

- A. The export data type is zipped.
- B. Your colleague put a password on the export.
- C. The playbook is misconfigured.
- D. The option to include the connector was not selected.

Answer: A

Explanation:

In the exhibit, the data structure shows a checksum field and a data field with a long, seemingly encoded string. This format is indicative of a file that has been compressed or encoded for storage and transfer.

* Export Data Type:

* The data field is likely a base64-encoded string, which is commonly used to represent binary data in text format. Base64 encoding is often applied to data that has been compressed (zipped) for easier handling and transfer. The checksum field, with an MD5 hash, provides a way to verify the integrity of the data after decompression.

* Option Analysis:

* A. The export data type is zipped: Correct. The compressed and encoded format of the data suggests that the export is in a zipped format, allowing for efficient storage and transfer.

* B. The playbook is misconfigured: There is no indication of misconfiguration in this exhibit.

The presence of the checksum and data fields aligns with standard export practices.

* C. The option to include the connector was not selected: There is no evidence in the output to conclude that connectors are missing. Connectors are typically listed separately and would not directly affect the checksum and encoded data structure.

* D. Your colleague put a password on the export: There's no indication of password protection in the exhibit. Password protection would likely alter the data structure, and there would be some mention of encryption.

Conclusion:

* Correct answer: A. The export data type is zipped.

* This answer is consistent with the typical use of base64 encoding for compressed (zipped) data exports in FortiAnalyzer.
