Practice MB-700 Questions 100% Pass | Latest MB-700: Microsoft Dynamics 365: Finance and Operations Apps Solution Architect 100% Pass

Since the MB-700 study quiz is designed by our professionals who had been studying the exam all the time according to the changes of questions and answers. Our MB-700 simulating exam is definitely making your review more durable. To add up your interests and simplify some difficult points, our experts try their best to simplify our MB-700 Study Material and help you understand the learning guide better.

Microsoft Dynamics 365: Finance and Operations Apps Solution Architect Sample Questions (Q90-Q95):

NEW QUESTION # 90

A company is planning a Dynamics 365 Finance implementation that has integrations to two other systems.

The implementation requirements are not fully defined.

The company plans to build the integrations and configure Dynamics 365 Finance in parallel. The company must ensure that risk assessments are completed after the development of each prototype in each area.

You need to define the methodology to apply to the application lifecycle management (ALM) strategy.

What should you plan for the ALM strategy? To answer, drag the appropriate components to the correct requirements. Each component may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

NEW QUESTION # 91

You are planning to implement Dynamics 365 Finance.

Accountants in your organization need to be able to enter multiple lines into payment journals.

You need to recommend a tool for expediting data entry.

What should you recommend?

- A. Use the desktop version of Microsoft Excel to use the Excel Data Connector app.
- B. Use Microsoft Excel online to use The Excel Data Connector app.
- C. Use the Data migration tool.
- D. Use an aggregate data entity to expose data to the Microsoft Excel Data Connector app.

Answer: A

NEW QUESTION # 92

A company implements Dynamics 365 finance and operations apps for its retail operations.

Unauthorized vendor checks have been created in the past resulting in check fraud.

The company must print a vendor aging report from a local printer in its headquarters location every week on Sunday night.

Every week on Monday, the comptroller must review the report and approve checks to issue to vendors.

You need to recommend a solution to meet the requirements.

What should you recommend? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

Box 1: Positive Pay

Positive Pay within Dynamics AX is one of the easiest systems to put into place to help prevent check fraud and protect your business. Positive Pay generates an electronic file that you can submit to your bank with a list of your approved checks, reducing the

chance of processing any fraudulent checks.

Box 2: Electronic reporting

Electronic reporting (ER) is a configurable tool that helps you create and maintain regulatory electronic reporting and payments.

You can use ER to configure formats for both incoming and outgoing electronic documents in accordance with the legal requirements of various countries and regions. ER lets you manage these formats during their lifecycle. For example, you can adopt new regulatory requirements and generate business documents in the required format to electronically exchange information with government bodies, banks, and other parties.

The ER engine is targeted at business users instead of developers. Because you configure formats instead of code, the processes for creating and adjusting formats for electronic documents are faster and easier.

NEW QUESTION # 93

A company is implementing Dynamics 365 and requires extensive data and end-to-end testing during each iteration.

You need to determine a testing strategy for multiple scenarios.

What should you recommend? To answer, drag the appropriate tools to the correct scenarios. Each tool may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

NEW QUESTION # 94

A company deploys Dynamics 365 finance and operations apps. The implementation includes Dynamics 365 and Microsoft Power Platform solutions. The company creates and manages service calls for technicians by using Dynamics 365 Field Service.

When a work order is created, Dynamics 365 Field Service must create a sales order for that work order in real time.

A user creates a change-based alert that will trigger when a newly created sales order from a workflow is greater than \$5,000. The alert must trigger a workflow the user can modify to automate other steps.

You need to recommend components for the company to use.

NOTE: Each correct selection is worth one point.

□

Answer:

Explanation:

□ Explanation:

Box 1: Dual-write

When a work order is created, Dynamics 365 Field Service must create a sales order for that work order in real time.

Integrate Dynamics 365 Field Service and Supply Chain Management

How it works

The integration is made possible because Field Service is built on top of Common Data Service and dual-write, which writes changes in Dynamics 365 Supply Chain Management to Common Data Service and vice versa.

After dual-write is enabled, a solution is imported into Field Service that adds the required fields to make the entities in each system integratable.

Box 2: Business events

A user creates a change-based alert that will trigger when a newly created sales order from a workflow is greater than \$5,000. The alert must trigger a workflow the user can modify to automate other steps.

Business events provide a mechanism that lets external systems receive notifications from finance and operations applications. In this way, the systems can perform business actions in response to the business events.

Business events occur when a business process is run. During a business process, users who participate in it perform business actions to complete the tasks that make up the business process.

A business action that a user performs can be either a workflow action or a non-workflow action. Approval of a purchase requisition is an example of a workflow action, whereas confirmation of a purchase order is an example of a non-workflow action.

Both types of actions can generate business events that external systems can use in integration and notification scenarios.
