

2V0-17.25 Dump Check, 2V0-17.25 Discount

Pass VMWare 2V0-17.25 Exam | Latest 2V0-17.25 Dumps & Practice Exams - Cert007

Issues	Troubleshooting Steps
Host in Isolation Response	Examine NIC teaming and load balancing configuration
Host in Failover State	Verify the port group settings and VLAN configuration
Host in Unreachable State	Check physical network cables and switch port status

6.DRAG DROP

Put the following steps in the correct order to update the driver/firmware in vSAN.

Verify that the new driver and firmware versions are active and the host is functioning correctly.	Step 1
Download the latest driver and firmware from the hardware vendor's website.	Step 2
Apply the firmware update to the host using the vendor's update tool.	Step 3
Plan for a maintenance window to perform the update.	Step 4
Check the current driver and firmware versions using the vSphere Client.	Step 5
Reboot the host to complete the update process.	Step 6
Update the driver using the vSphere Lifecycle Manager (vLCM)	Step 7

2025 Latest BraindumpsPrep 2V0-17.25 PDF Dumps and 2V0-17.25 Exam Engine Free Share: <https://drive.google.com/open?id=18Eq8gc-R29LrxYsvDbDbQgv5FXq9qgt4>

After the user has purchased our 2V0-17.25 learning materials, we will discover in the course of use that our product design is extremely scientific and reasonable. Details determine success or failure, so our every detail is strictly controlled. For example, our learning material's Windows Software page is clearly, our 2V0-17.25 Learning material interface is simple and beautiful. There are no additional ads to disturb the user to use the 2V0-17.25 qualification question. Once you have submitted your practice time, 2V0-17.25 study tool system will automatically complete your operation.

VMware 2V0-17.25 Exam Syllabus Topics:

Topic	Details

Topic 1	<ul style="list-style-type: none"> Deploy, Configure, and Operate VMware Cloud Foundation (VCF): This section of the exam measures the skills of VCF Administrators and goes in-depth into deploying, configuring, and managing VMware Cloud Foundation. The deployment portion covers identifying deployment models, configuring private cloud environments, and setting up workload domains and networking. The management objectives focus on lifecycle operations such as fleet management, identity and role-based access, licensing, certificate handling, and importing existing vCenters. Operations are assessed through capabilities like monitoring health, logs, networks, and storage, along with creating dashboards, configuring alerts, and ensuring compliance. The automation portion evaluates skills in using VCF Automation for multi-tenancy, provider networking, content libraries, governance policies, and extensibility to automate business processes. It also includes knowledge of deploying Supervisor-based services within Cloud Foundation.
Topic 2	<ul style="list-style-type: none"> VMware Cloud Foundation Fundamentals: This section of the exam measures the skills of Private Cloud Engineers and covers the basic building blocks of VMware Cloud Foundation. It includes the vision and use cases for private cloud, along with the value it provides to businesses. Candidates are expected to understand compute fundamentals such as deploying and managing vCenter, ESXi, clusters, and virtual machines. Storage fundamentals include configuring vSphere storage, setting up vSAN clusters, applying storage policies, and understanding resilience options. Networking fundamentals are also assessed, with a focus on configuring connectivity, fabrics, routing, and network services in a VMware environment.
Topic 3	<ul style="list-style-type: none"> IT Architectures, Technologies, Standards: This section of the exam measures the skills of Cloud Architects and focuses on understanding the broader context of IT architectures, common technologies, and industry standards. While it does not have testable objectives, it sets the foundation for how VMware Cloud Foundation aligns with enterprise cloud strategies.
Topic 4	<ul style="list-style-type: none"> Plan and Design the VMware by Broadcom Solution: This section of the exam measures the skills of Solution Designers and emphasizes the ability to plan and design VMware by Broadcom solutions. Although no testable objectives are defined here, it reinforces the importance of architectural planning and design considerations for large-scale cloud deployments.

High-Efficiency 2V0-17.25 Exam PDF Guide dumps materials - BraindumpsPrep

Before starting the VMware 2V0-17.25 preparation, plan the amount of time you will allot to each topic, determine the topics that demand more effort and prioritize the components that possess more weightage in the VMware 2V0-17.25 Exam. This kind of polished approach is beneficial for a commendable grade in the VMware 2V0-17.25 Exam.

VMware Cloud Foundation 9.0 Administrator Sample Questions (Q48-Q53):

NEW QUESTION # 48

An administrator is tasked to upgrade a VMware Cloud Foundation (VCF) environment from 5.2 to 9.0. During preparation, the administrator sees only the SDDC Manager 9.0 bundle available.

Why are no other bundles available?

- A. SDDC Manager must be upgraded first.
- B. The ASYNC tool must be used to download all required bundles.
- C. An offline repository was used for upgrade bundles.
- D. A proxy server was used to download bundles.

Answer: A

Explanation:

The upgrade to VCF 9.0 begins with the SDDC Manager upgrade. Only after SDDC Manager is upgraded to 9.0 are the other component bundles (vCenter, ESXi, NSX, Operations) made available for download and application.

This design ensures SDDC Manager is compatible with the lifecycle operations required for the rest of the environment. If SDDC Manager is not upgraded first, it cannot process or display other bundles.

NEW QUESTION # 49

What is the required update interval for VMware Cloud Foundation (VCF) licenses in connected mode to maintain the entitlement?

- A. 90 days
- **B. 180 days**
- C. 365 days
- D. 270 days

Answer: B

Explanation:

VCF 9.0 licensing is managed through VCF Operations and the VCF Business Services console. The product requires periodic license updates even in connected mode. The documentation states explicitly: "You must update your licenses at least once every 6 months (180 days). If license usage data is not submitted... your licenses are treated as expired, your hosts are disconnected from the vCenter instance, and you cannot start any workload operations." This language is repeated in the Licensing Overview and Upgrade/Registration sections, confirming the 180-day requirement applies to both connected and disconnected modes (in connected mode usage submission is automated, but you still must perform an update action). Therefore, the correct interval is 180 days.

NEW QUESTION # 50

Which feature of VMware Data Services Manager enhances database security and compliance?

- **A. Database-Level Authentication**
- B. Storage replication
- C. Network traffic optimization
- D. Automated workload migration

Answer: A

Explanation:

VMware Data Services Manager enhances database security and compliance by providing Database- Level Authentication, which ensures that access to databases is tightly controlled and that only authorized users can access sensitive database information. This is critical for maintaining security and compliance with industry standards and regulations.

NEW QUESTION # 51

An administrator can set resource limits and container defaults on a vSphere Namespace.

Which three resource limits can be set? (Choose three.)

- A. Number of containers
- **B. CPU**
- **C. Memory**
- **D. Storage**
- E. Network

Answer: B,C,D

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Within a vSphere Namespace, administrators have the ability to configure resource limits to control the amount of resources that workloads can consume. According to the official VMware Cloud Foundation documentation, the three types of resource limits that can be set on a vSphere Namespace are:

CPU: The administrator can specify the maximum CPU resources that can be used within the namespace.

Memory: The administrator can define the maximum amount of memory allocated to workloads in the namespace.

Storage: The administrator can configure storage limits, specifying how much storage capacity is available to the namespace.

These resource limits are essential for managing and isolating resources across different namespaces to prevent resource contention and ensure fair resource distribution. The documentation clearly states that there is no option to set a resource limit based on the number of containers or network bandwidth within the vSphere Namespace configuration. The focus is solely on controlling CPU,

memory, and storage resources.

NEW QUESTION # 52

Which vSphere features or settings help automate host patching and ensure all hosts in a cluster are uniformly updated?

- A. Host Profiles
- B. vSphere Lifecycle Manager (vLCM)
- C. vSphere Update Manager in older versions
- D. Enhanced vMotion Compatibility (EVC)

Answer: A,B,C

Explanation:

vSphere Lifecycle Manager (or Update Manager in older versions) automate patching, while Host Profiles help maintain consistent configurations. EVC standardizes CPU features but does not patch or update hosts.

NEW QUESTION # 53
