Administration Sample Questions (Q75-Q80):

NEW QUESTION # 75

You want to set up a printer locally on a Microsoft Windows-based AS ABAP. Which host spool access method must you use?

- A. C
- B. U
- C. G
- D. L

Answer: A

NEW QUESTION # 76

What are prerequisites to use the Software Update Manager (SUM) to apply SAP Support Packages to an AS ABAP-based SAP system? Note: There are 3 correct answers to this question.

- A. A suitable Stack XML file must exist
- B. The SUM archive must have been extracted.
- C. The SUM archive must have been provided to the SAP Host Agent
- D. The latest SAP kernel patch must have been applied to the SAP system
- E. The SAP Host Agent must have been configured by SUM

Answer: A,B,E

Explanation:

To use the Software Update Manager (SUM) for applying SAP Support Packages to an AS ABAP-based SAP system, certain prerequisites must be met:

* B. The SUM archive must have been extracted: Before starting the update process, the SUM tool itself must be available. This involves downloading the SUM archive from the SAP Software Download Center and extracting it on the host where the update will be performed. This step is foundational to ensure that the latest version of SUM, with all its features and improvements, is used for the update process.

* C. A suitable Stack XML file must exist: The Stack XML file contains information about the components and versions that are to be installed or updated in the system. This file is created using the Maintenance Planner tool on the SAP Support Portal. It ensures that the SUM tool has a clear roadmap of the specific updates and patches to be applied, tailored to the system's current configuration and future requirements.

* E. The SAP Host Agent must have been configured by SUM: The SAP Host Agent plays a critical role in the system update process, facilitating communication and operations between the SUM tool and the SAP system components. Configuring the SAP Host Agent to work with SUM is essential for a seamless and automated update process, allowing SUM to perform its tasks efficiently.

Meeting these prerequisites ensures that the SUM tool is ready and properly equipped to handle the complexities of applying SAP Support Packages, leading to a smoother and more predictable update process.

NEW QUESTION # 77

Which app types require SAP HANA as system database? Note: There are 2 correct answers to this question.

- A. Fact sheet apps
- B. Analytical apps
- C. Transactional apps
- D. Classic applications

Answer: A,B

Explanation:

According to the SAP Fiori App Types and Database Requirements document¹, analytical apps and fact sheet apps require SAP HANA as system database. Analytical apps provide insight into the real-time operations of the business by collecting and displaying analytic information and indicators, such as KPIs, directly in the browser. Fact sheet apps display contextual information and key facts about central objects used in the business operations. Both types of apps consume data immediately from the SAP HANA database, mainly through search models. Transactional apps and classic applications, on the other hand, can run on any database supported by the SAP NetWeaver Application Server ABAP.
