Accompanied with acceptable prices for your reference, all our Plat-Dev-301 Exam Materials with three versions are compiled by professional experts in this area more than ten years long.

Salesforce Certified Platform Developer II - Multiple Choice Sample Questions (Q111-Q116):

NEW QUESTION # 111

A developer has a Visualforce page that automatically assigns ownership of an Account to a queue upon save. The page appears to correctly assign ownership, but an assertion validating the correct ownership fails.

What can cause this problem?

- A. The test class does not implement the Queueable interface.
- B. The test class does not use the seeallData=true= annotation.
- C. The test class does not use the Bulk API for loading test data.
- **D. The test class does not retrieve the updated value from the database,**

Answer: D

Explanation:

If the test class does not retrieve the updated value from the database, it will not see any changes made by the page logic. This can cause assertions that check for those changes to fail. The test should query for the most recent value from the database after the operation that is supposed to update the value.

NEW QUESTION # 112

When the sales team views an individual customer record, they need to see recent interactions for the customer. These interactions can be sales orders, phone calls, or Cases. The date range for recent interactions will be different for every customer record type. How can this be accomplished?

- A. Use batch Apex to query for the most recent interactions when the customer view screen is loaded.
- **B. Use a Lightning component to query and display interactions based on record type that is passed in using a design:attribute from the Lightning page.**
- C. Use Lightning Flow to read the customer's record type, and then do a dynamic query for recent interactions and display on the View page.
- D. Use a dynamic form on the customer record page to display recent interactions.

Answer: B

Explanation:

A Lightning component can dynamically query and display interactions based on the customer's record type. The component can receive the record type as a parameter and adjust the query accordingly, providing the required functionality without batch processing or additional configurations.

NEW QUESTION # 113

A developer is asked to look into an issue where a scheduled Apex is running into DML limits. Upon investigation, the developer finds that the number of records processed by the scheduled Apex has recently increased to more than 10,000. What should the developer do to eliminate the limit exception error?

- A. Use the @future annotation.
- B. Use platform events.
- **C. Implement the Batchable interface.**
- D. Implement the Queueable interface.

Answer: C

Explanation:

When scheduled Apex runs into DML limits due to a high number of records, implementing the Batchable interface is recommended. This allows the job to be broken down into smaller batches that are processed separately, thus avoiding hitting governor limits.

Reference:

Using Batch Apex

NEW QUESTION # 114

A company has a Lightning page with many Lightning Components, some that cache reference data. It is reported that the page does not always show the most current reference data.

What can a developer use to analyze and diagnose the problem in the Lightning page?

- A. Salesforce Lightning Inspector Actions tab
- B. Salesforce Lightning Inspector Event Log tab
- C. Salesforce Lightning Inspector Transactions tab
- **D. Salesforce Lightning Inspector Storage tab**

Answer: D

Explanation:

The Storage tab in the Salesforce Lightning Inspector can be used to view and manage data stored on the client side, such as in the cache. This is useful for diagnosing issues related to stale or outdated cache data that may prevent the most current reference data from displaying.

NEW QUESTION # 115

Universal Containers needs to integrate with several external systems. The process is initiated when a record is created in Salesforce. The remote systems do not require Salesforce to wait for a response before continuing. What is the recommended best solution to accomplish this?

- A. Trigger with HTTP callout
- **B. Platform event**
- C. PushTopic event
- D. Outbound message

Answer: B

Explanation:

Platform events provide a robust and scalable way to communicate changes and events from Salesforce to external systems, especially when there is no requirement for Salesforce to wait for a response. They are designed to support event-driven architectures and can handle high volumes of events that can be published and consumed by external systems. Outbound messages, on the other hand, are limited by the need for an acknowledgment response from the target system, which can introduce latency.

NEW QUESTION # 116

.....

As you all know that practicing with the wrong preparation material will waste your valuable money and many precious study hours. So you need to choose the most proper and verified preparation material with caution. Preparation material for the Salesforce Certified Platform Developer II - Multiple Choice (Plat-Dev-301) exam questions from ValidBraindumps helps to break down the most difficult concepts into easy-to-understand examples.
