You must be attracted by the APP online version of our 400-007 exam questions, which is unlike other exam materials that are available on the market, study torrent specially proposed different version to allow you to learn not on paper, but to use on all kinds of electronic devices such as IPAD, mobile phones or laptop to learn. This greatly improves the students' availability of fragmented time. You can also have a quite enjoyable experience with APP online version of our 400-007 Study Materials. Just have a try on this version of our 400-007 learning guide!

If you are a workman and you want to pass 400-007 exam quickly, Prep4pass will be your best choice. 400-007 dumps and answers from our Prep4pass site are all created by the IT talents with more than 10-year experience in IT certification. It can not only save your time, but also help you pass the 400-007 Exam easily.

Actually, 400-007 exam really make you anxious. You may have been suffering from the complex study materials, why not try our 400-007 exam software of Prep4pass to ease your burden. Our IT elite finally designs the best 400-007 exam study materials by collecting the complex questions and analyzing the focal points of the exam over years. Even so, our team still insist to be updated ceaselessly, and during one year after you purchased 400-007 Exam software, we will immediately inform you once the 400-007 exam software has any update.

Cisco Certified Design Expert (CCDE) Written Exam Sample Questions (Q18-Q23):

NEW QUESTION # 18

An enterprise campus is adopting a network virtualization design solution with these requirements

- * It must include the ability to virtualize the data plane and control plane by using VLANs and VRFs
- * It must maintain end-to-end logical path transport separation across the network
- * resources available grouped at the access edge

Which two primary models can this network virtualization design be categorized? (Choose two)

- A. Path isolation
- B. Group virtualization
- C. Services virtualization
- D. Session isolation
- E. Edge isolation

Answer: A,C

NEW QUESTION # 19

As technologies such as big data, cloud, and IoT continue to grow, so will the demand for network bandwidth. Business strategies must be flexible to accommodate these changes when it comes to priorities and direction and the network design strategy also must be agile and adaptable. Drag and drop the benefits from the left onto the corresponding strategic approaches on the right as they relate to network design and management.

Answer:

Explanation:

NEW QUESTION # 20

A multinational enterprise integrates a cloud solution with these objectives

- * Achieve seamless connectivity across different countries and regions
 - * Extend data center and private clouds into public clouds and provider-hosted clouds
- What are two outcomes of deploying data centers and fabrics that interconnect different cloud networks? (Choose two.)

- A. unidirectional workload mobility across the cloud
- B. data and network ownership
- C. ability to place workloads across clouds
- D. centralized visibility
- E. enhanced security

Answer: C,E

NEW QUESTION # 21

The Company XYZ network requires OSPF dead neighbor detection in a subsecond manner. However, the company network does not support BFD. Which other feature can be used to fulfill the design requirement?

- A. Fast hello
- B. LFA
- C. STP
- D. DPD

Answer: A

Explanation:

When Bidirectional Forwarding Detection (BFD) is not available, OSPF can still achieve subsecond convergence using the OSPF fast hello feature.

* Fast hello allows the configuration of OSPF hello/dead intervals to subsecond values (e.g., hello = 100ms, dead = 300ms).

* This accelerates OSPF's ability to detect neighbor failures based on missed hello packets without relying on external mechanisms like BFD.

Why other options are incorrect:

* A. STP (Spanning Tree Protocol) is unrelated to OSPF and is used at Layer 2.

* C. LFA (Loop-Free Alternate) is a fast reroute technique but does not affect neighbor failure detection.

* D. DPD (Dead Peer Detection) is used in VPN technologies (e.g., IPsec) and not applicable in OSPF.

Fast hello is fully aligned with CCDE v3.1 under "Protocol Design Implications" and is a commonly recommended method for improving IGP convergence performance when BFD is not an option.

NEW QUESTION # 22

A BGP route reflector in the network is taking longer than expected to converge during large network changes. Troubleshooting shows that the router cannot handle all the TCP acknowledgements during route updates. Which action can be performed to tune the device performance?

- A. Increase the keepalive timers for each BGP neighbor.
- B. Increase the size of the hold queue.
- C. Increase the size of the large buffers.

- D. Decrease the size of the small buffers.

Answer: B

Explanation:

During massive BGP update events (such as after a topology change), a route reflector may struggle processing both BGP updates and the resulting TCP acknowledgments required for reliable BGP session communication.

Increasing the hold queue size allows the router to buffer more packets waiting for processing (including TCP acknowledgments), helping the router handle bursts of BGP updates without dropping TCP segments or tearing down sessions.

This queue tuning is a well-known scalability optimization in CCDE v3.1 when designing route reflector clusters handling large-scale control plane updates.

Why other options are incorrect:

* B & C: Adjusting buffer sizes does not directly address TCP acknowledgment backlog.

* D: Keepalive timers control session liveness, not update processing.
