ACD201 Valid Exam Topics 100% Pass | Valid ACD201 Certification Dumps: Appian Senior Developer

The TestkingPDF Appian ACD201 exam questions is 100% verified and tested. TestkingPDF Appian ACD201 exam practice questions and answers is the practice test software. In TestkingPDF, you will find the best exam preparation material. The material including practice questions and answers. The information we have could give you the opportunity to practice issues, and ultimately achieve your goal that through Appian ACD201 Exam Certification.

Appian Senior Developer Sample Questions (Q82-Q87):

NEW QUESTION # 82

You're performing System Integration Testing on a client's application that integrates with an external system. In this instance, you're testing the application's interactions with external integrations to ensure that data is being handled correctly between the two systems. However, this step has been done manually and is time- consuming. What should you do to make this process more efficient?

- A. Utilize the Postman API Platform to test the integrations with the external system and Appian's web APIs through a defined set of test cases.
- B. Utilize Appian-Locust to develop and execute performance tests on the systems integrations by scripting a scenario where multiple users are interacting with the external systems simultaneously.
- **C. Utilize FitNesse for Appian to perform automated functional testing on the workflows that include integrated systems through a defined set of test cases.**

Answer: C

Explanation:

FitNesse for Appian is designed for automated functional testing of Appian workflows, including those that call external integrations. By building repeatable FitNesse test scripts that drive the end-to-end process, you can automatically verify that data is correctly sent to - and returned from - the external system each time, greatly reducing the manual effort of system-integration testing.

NEW QUESTION # 83

You're reviewing the process model built by your team member. Which two design decisions might cause performance issues? (Choose two.)

- **A. Too many nodes**
- B. Asynchronous subprocess
- **C. No target process for the Send Message event**
- D. Data types passed by reference

Answer: A,C

Explanation:

Having no target process for the Send Message event can cause unnecessary processing and delays.

Too many nodes in a process model increase complexity and processing overhead, leading to potential performance issues.

NEW QUESTION # 84

You're creating a new record type with data sync enabled. Users in the "ACME Employees" group must be able to access the record list and start the New Case action.

What are two valid steps that you should perform to grant users the appropriate access? (Choose two.)

- A. Add the "ACME Employees" group as a Viewer on the record type.
- B. Grant Viewer permissions to the underlying interface object for the record list.
- C. Grant Initiator permissions to the underlying process model for the New Case action.
- D. Add the "ACME Employees" group as a Viewer to the data store mapped to the record.

Answer: A,C

Explanation:

Adding the "ACME Employees" group as a Viewer on the record type allows them to access the record list.

Granting Initiator permissions to the process model for the New Case action enables group members to start that action.

NEW QUESTION # 85

You need to create a web API so that an external system can start a process in your app.

Which two statements are true about using a service account to authenticate the system? (Choose two.)

- A. The service account must be granted access to that web API via group management.
- B. The service account must be configured from within the web API object.
- C. The service account is created as any other object in Appian.
- D. The service account must be a user in the Service Accounts group.

Answer: A,D

Explanation:

The service account must be granted access to the web API, typically via group management, to allow authenticated calls.

The service account must be a user in the Service Accounts group to be used for authentication in integrations such as web APIs.

NEW QUESTION # 86

Which step should you perform to identify expression rules that have been causing or have caused performance issues in the past 30 days?

- A. Navigate to the Admin Console > Rule Performance tab.
- B. Monitor the runtime of all test cases.
- C. Examine the application server log

Answer: A

Explanation:

The Admin Console > Rule Performance tab provides metrics and insights on expression rules that have caused performance issues in the past 30 days, allowing you to identify and address slow-running rules.

NEW QUESTION # 87

.....

We think of providing the best services of ACD201 exam questions as our obligation. So we have patient after-sales staff offering help 24/7 and solve your problems all the way. Those considerate services are thoughtful for your purchase experience and as long as you need us, we will solve your problems. Our staff is suffer-able to your any questions related to our ACD201 test guide. If you get any suspicions, we offer help 24/7 with enthusiasm and patience. Apart from our stupendous ACD201 Latest Dumps, our after-sales services are also unquestionable. Your decision of the practice materials may affects the results you concerning most right now. Good exam results are not accidents, but the results of careful preparation and high quality and accuracy materials like our ACD201 practice materials.
