## Microsoft GitHub Copilot Sample Questions (Q76-Q81):

### NEW QUESTION # 76

Which of the following prompts can be used to guide GitHub Copilot Chat in refactoring code for quality improvements? (Each correct answer presents part of the solution. Choose two.)

- A. "Predict future coding trends and update my codebase accordingly."
- B. "Refactor my application to meet the latest coding standards."
- C. "Suggest ways to enhance the maintainability of this code segment."
- D. "Show me how to improve the readability of this function."

**Answer: C,D**

Explanation:

Effective prompts for refactoring include requests that focus on specific quality improvements, such as readability and maintainability. These prompts guide GitHub Copilot to provide relevant and actionable suggestions.

### NEW QUESTION # 77

How does the /tests slash command assist developers?

- A. Constructs detailed test documentation.
- B. Executes test cases to find issues with the code.
- C. Integrates with external testing frameworks.
- D. Creates unit tests for the selected code.

**Answer: D**

Explanation:

The /tests slash command in GitHub Copilot Chat creates unit tests for the selected code, helping developers ensure the functionality and reliability of their code.

### NEW QUESTION # 78

In what way can GitHub Copilot and GitHub Copilot Chat aid developers in modernizing applications?

- A. GitHub Copilot can directly convert legacy applications into cloud-native architectures.
- B. GitHub Copilot can refactor applications to align with upcoming standards.
- C. GitHub Copilot can create and deploy full-stack applications based on a single query.
- D. GitHub Copilot can suggest modern programming patterns based on your code.

**Answer: D**

Explanation:

GitHub Copilot and GitHub Copilot Chat are powerful AI-driven tools designed to assist developers by providing context-aware code suggestions and interactive support. Specifically, in the context of modernizing applications, GitHub Copilot excels at analyzing existing code and suggesting modern programming patterns, best practices, and syntax improvements that align with contemporary development standards. For example, it can recommend updates to outdated constructs, propose more efficient algorithms, or suggest frameworks and libraries that are widely used in modern application development.

Why not A? GitHub Copilot does not "directly convert" legacy applications into cloud-native architectures. It can assist by suggesting code changes or patterns that support such a transition, but it doesn't autonomously perform the full conversion process, which involves architectural decisions and deployment steps beyond its scope.

Why not C? While GitHub Copilot can generate code snippets and even larger portions of an application, it cannot create and deploy full-stack applications from a single query. It requires developer input, refinement, and integration to achieve a complete, deployable solution.

Why not D? GitHub Copilot can assist with refactoring by suggesting improvements to existing code, but it doesn't inherently "align with upcoming standards" in a predictive sense. Its suggestions are based on current best practices and the data it was trained on, not future standards that are yet to be defined.

Thus, B is the most accurate and realistic way GitHub Copilot aids developers in modernizing applications, leveraging its ability to provide relevant, context-based suggestions to update and improve codebases.

#### NEW QUESTION # 79

What is a key consideration when relying on GitHub Copilot Chat's explanations of code functionality and proposed improvements?

- A. GitHub Copilot Chat uses a static database for generating explanations.
- B. The explanations are primarily derived from user-provided documentation.
- **C. Reviewing and validating the generated output for accuracy and completeness.**
- D. The explanations are dynamically updated based on user feedback.

**Answer: C**

Explanation:

While GitHub Copilot Chat can provide helpful explanations and suggestions, it's crucial to review and validate the generated output. Copilot's suggestions are based on its training data, and they may not always be perfectly accurate or complete. Human judgment is essential to ensure the quality and correctness of the code.

#### NEW QUESTION # 80

How can GitHub Copilot assist with code refactoring tasks?

- A. GitHub Copilot can fix syntax errors without user input.
- B. GitHub Copilot can automatically rewrite code to follow best practices.
- **C. GitHub Copilot can suggest refactoring improvements for better code quality.**
- D. GitHub Copilot can remove unnecessary files from the project directory.

**Answer: C**

Explanation:

GitHub Copilot can analyze existing code and suggest refactoring improvements to enhance code quality, readability, and maintainability. It can propose changes to improve code structure, reduce complexity, and follow best practices.

Reference: GitHub Copilot documentation on code refactoring assistance.

#### NEW QUESTION # 81
