## Tutorial

Are you on the way to pass the H35-211\_V2.5 exam? Our H35-211\_V2.5 exam questions will be the best choice for you. And if you still feel uncertain about the content, wondering whether it is the exact H35-211\_V2.5 exam material that you want, you can free download the demo to check it out. You will be quite surprised by the convenience to have an overview just by clicking into the link, and you can experience all kinds of H35-211\_V2.5 versions.

The Huawei H35-211\_V2.5 exam covers a wide range of topics, including access network principles, access network construction, access network maintenance, access network security, and access network troubleshooting. It also includes practical exercises and scenarios that test a candidate's ability to apply their knowledge to real-world situations. H35-211\_V2.5 Exam is designed to ensure that candidates have a deep understanding of access network technologies and can design, deploy, and manage access networks effectively.

## Huawei HCIP-Access V2.5 Sample Questions (Q106-Q111):

### NEW QUESTION # 106

Which of the following statements about multicast is incorrect?

- **A. In the case of IGMP match mode disable, you need to configure a multicast channel.**
- B. General parameters for multicast protocols (IGMP proxy and IGMP snooping) are configured globally at Layer 2 and apply to all multicast VLANs.
- C. The report sent by a user is captured by the board logic and sent to the CPU of the board.
- D. You can add IGMP users to a BTV. By default, a multicast user can watch 8 programs.

**Answer: A**

Explanation:

A is consistent with Huawei L2 multicast practice: global L2 multicast/IGMP snooping parameters can be set and then take effect for multicast VLANs involved in service provisioning.

B reflects the forwarding/CPU-punt behavior on access line cards: IGMP Reports/Leaves from users are recognized by board logic and processed by the control plane to update multicast state.

C matches default service control on BTV/IPTV access where a default program limit (commonly 8) per user applies unless adjusted by policy/profile.

D is incorrect: when IGMP match mode is disabled, multicast programs are not required to be pre-provisioned as channels; groups can be learned dynamically by IGMP. Preconfiguring channels is needed when match mode is enabled (channel matching enforced).

References: HCIP-Access V2.5 - Multicast Service Provisioning on OLT/MDU; Huawei BTV/Multicast Feature Guide - IGMP Snooping/Proxy, Program Limits, and Match-Mode Behavior.

### NEW QUESTION # 107

(Multi-select) eSight is network management software positioned for enterprise networks and can view ONT device details, including which of the following?

- **A. The optical module transmit power**
- **B. Speed**
- **C. ONT port information**
- **D. Optical module temperature**

**Answer: A,B,C,D**

Explanation:

The ONT details pane in eSight displays access-port attributes (admin/state, type), Ethernet rate/speed/duplex, and PON optical module telemetry such as temperature and Tx/Rx optical power for condition monitoring and troubleshooting.

References: HCIP-Access V2.5 Study Guide - Network Management & Maintenance (eSight ONT management views) and eSight Device Management - ONT detail monitoring items (port info, rate, optical parameters).

### NEW QUESTION # 108

On U2000, if an OLT PON port LED is not green, it indicates the PON port is faulty.

- **A. Wrong**

- B. Right

**Answer: A**

Explanation:

This is wrong. A PON port LED not green may indicate several states-not only a hardware fault. It can mean the port is administratively shutdown, no ONUs are registered, or the port is in an alarm or idle state depending on the LED color and blinking pattern. Fault requires correlation with alarms and performance counters in U2000, not LED color alone.

References: HCIP-Access V2.5-OLT maintenance and alarm interpretation; Huawei OLT Hardware Description & Indicator Guide (PON port LED states and meanings).

### NEW QUESTION # 109

(Radio) In the FTTB/C scenario, ONU is used as an AG device to access the phone, and there is no possible cause of sound failure for SIP protocol off-hook

- A. ONU and IMS routes are unreachable
- **B. The ONU side MG interface status is abnormal**
- C. There are packet losses in the olt upper-layer network
- D. The voice server is down

**Answer: B**

### NEW QUESTION # 110

(Radio) When the invitation message sent by user A reaches user B after passing through server C, D, E, the message received by user B is VIA. The server address of the field information record is in descending order.

- A. E->C->D
- B. C-E->D
- **C. E->D->C**
- D. C->D->E

**Answer: C**
