## Valid SPLK-3002 Mock Test, SPLK-3002 Reliable Test Notes

The SPLK-3002 exam questions by experts based on the calendar year of all kinds of exam after analysis, it is concluded that

conforms to the SPLK-3002 exam thesis focus in the development trend, and summarize all kind of difficulties you will face and highlight the user review must master the knowledge content. And as far as possible with extremely concise prominent text of SPLK-3002 Test Guide is accurate incisive expression of the proposition of this year's forecast trend, and through the simulation of topic design meticulously. Your success is ready with our SPLK-3002 exam questions.

## Splunk IT Service Intelligence Certified Admin Sample Questions (Q36-Q41):

### NEW QUESTION # 36

Besides creating notable events, what are the default alert actions a correlation search can execute? (Choose all that apply.)

- A. Include in RSS feed.
- B. Ping a host.
- C. Run a script.
- D. Send email.

**Answer: A,C,D**

Explanation:

Throttling applies to any correlation search alert type, including notable events and actions (RSS feed, email, run script, and ticketing).

Reference: <https://docs.splunk.com/Documentation/ITSI/4.10.2/EA/ConfigCS> B, C, and D are correct answers because they are the default alert actions that a correlation search can execute besides creating notable events. You can configure a correlation search to send an email, include the results in an RSS feed, or run a custom script when the search matches a defined pattern. Ping a host is not a default alert action for correlation searches. References: Configure correlation search settings in ITSI

### NEW QUESTION # 37

Which of the following services often has KPIs but no entities?

- A. Network Service.
- B. Technical Service.
- C. Business Service.
- D. Security Service.

**Answer: C**

Explanation:

In the context of Splunk IT Service Intelligence (ITSI), a Business Service often has Key Performance Indicators (KPIs) but might not have directly associated entities. Business Services represent high-level aggregations of organizational functions or processes and are typically measured by KPIs that reflect the performance of underlying technical services or components rather than direct infrastructure entities. For example, a Business Service might monitor overall transaction completion times or customer satisfaction scores, which are abstracted from the specific technical entities that underlie these metrics. This abstraction allows Business Services to provide a business-centric view of IT health and performance, focusing on outcomes rather than specific technical components.

### NEW QUESTION # 38

After a notable event has been closed, how long will the meta data for that event remain in the KV Store by default?

- A. 3 months.
- B. 1 year.
- C. 6 months.
- D. 9 months.

**Answer: C**

Explanation:

By default, notable event metadata is archived after six months to keep the KV store from growing too large.

Reference: <https://docs.splunk.com/Documentation/ITSI/4.10.2/EA/TrimNECollections>

### NEW QUESTION # 39

Which of the following is a best practice for identifying the most effective services with which to start an iterative ITSI deployment?

- A. Only include KPIs if they will be used in multiple services.
- B. Define a large number of key services early.
- **C. Analyze the business to determine the most critical services.**
- D. Focus on low-level services.

**Answer: C**

Explanation:

Reference: <https://docs.splunk.com/Documentation/ITSI/4.10.2/SI/MKA>

A best practice for identifying the most effective services with which to start an iterative ITSI deployment is to analyze the business to determine the most critical services that have the most impact on revenue, customer satisfaction, or other key performance indicators. You can use the Service Analyzer to prioritize and monitor these services. References: Service Analyzer

### NEW QUESTION # 40

Which of the following is a good use case for a Multi-KPI alert?

- A. Alerting when the trend of two or more KPIs indicates service failure is imminent.
- **B. Alerting when comparing the values of two or more KPIs indicates an unusual condition is occurring.**
- C. Alerting when two or more KPIs are deviating from their typical pattern.
- D. Alerting when the values of two or more KPIs go into maintenance mode.

**Answer: B**

Explanation:

A Multi-KPI alert in Splunk IT Service Intelligence (ITSI) is designed to trigger based on the conditions of multiple Key Performance Indicators (KPIs). This type of alert is particularly useful when a single KPI's state is not sufficient to indicate an issue, but the correlation between multiple KPIs can provide a clearer picture of an emerging problem. The best use case for a Multi-KPI alert is therefore when comparing the values of two or more KPIs indicates an unusual condition is occurring. This allows for more nuanced and context-rich alerting mechanisms that can identify complex issues not detectable by monitoring individual KPIs. This approach is beneficial in complex environments where the interplay between different performance metrics needs to be considered to accurately detect and diagnose issues.

### NEW QUESTION # 41

.....

It is similar to the SPLK-3002 desktop-based software, with all the elements of the desktop practice exam. This SPLK-3002 exam can be accessed from any browser and does not require installation. The SPLK-3002 questions in the mock test are the same as those in the real exam.
