

EX380 Latest Exam Questions, New EX380 Test Format

WWW.VALIDQUESTIONS.COM

Are you planning to appear in the Red Hat Certified Specialist in OpenShift Automation and Integration (EX380) certification test and need to know where to get updated practice questions? Then you are at the right place because Red Hat Certified Specialist in OpenShift Automation and Integration (EX380) has made the learning material for the applicants to prepare successfully for the certification exam in a short time.

RedHat EX380 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Provision and inspect cluster logging: Covers deploying and configuring OpenShift logging with Vector and Loki, forwarding logs externally, querying logs, and diagnosing logging issues.
Topic 2	<ul style="list-style-type: none">• Back up and restore applications with OpenShift API for Data Protection (OADP): Covers deploying OADP, performing full application backups including data and resources, using volume snapshots, and scheduling and restoring backups.
Topic 3	<ul style="list-style-type: none">• Implement OpenShift GitOps: Covers deploying and configuring Argo CD with the GitOps operator to manage both cluster administration and application delivery through Git-based pipelines and integrations.
Topic 4	<ul style="list-style-type: none">• Manage cluster monitoring and metrics: Covers troubleshooting application and cluster performance issues and managing alerts and notifications.

- Manage workloads with pod scheduling: Covers controlling where pods run using taints, tolerations, labels, selectors, affinity rules, and pod disruption budgets to ensure workload placement and resiliency.

Quiz 2026 High-quality RedHat EX380 Latest Exam Questions

If you really long for recognition and success, you had better choose our EX380 exam demo since no other exam demo has better quality than ours. Trust us and you will be sure to win a beautiful future. As you know, in most cases, people achieve success because they size up the situation. Now that using our EX380 practice materials have become an irresistible trend, why don't you accept it with pleasure? We will never let you down!

RedHat Red Hat Certified Specialist in OpenShift Automation and Integration Sample Questions (Q32-Q37):**NEW QUESTION # 32**

Add a second Identity Provider (HTPasswd) alongside LDAP

Task Information : Configure multiple identity providers by adding an HTPasswd IDP without removing the existing LDAP IDP.

Answer:

Explanation:

See the solution below in Explanation:

Explanation:

- * Create a local htpasswd file with a test user
 - * `htpasswd -c -B -b /tmp/htpass.txt testuser RedHat123!`
 - * `-c` creates a new file (use only once).
 - * `-B` uses bcrypt hashing (recommended).
 - * `-b` supplies password non-interactively (good for labs).
 - * Create the HTPasswd secret in openshift-config
 - * `oc -n openshift-config create secret generic htpass-secret --from-file=htpasswd=/tmp/htpass.txt`
 - * OAuth reads the htpasswd key from this secret.
 - * Edit OAuth and add the HTPasswd provider (keep LDAP intact)
 - * `oc edit oauth cluster`
- Add another entry under `spec.identityProviders`:
- ```
- name: local-htpasswd
mappingMethod: claim
type: HTPasswd
htpasswd:
fileData:
name: htpass-secret
```
- \* This adds a second login option while preserving LDAP.
  - \* Restart OAuth pods
  - \* `oc -n openshift-authentication delete pod -l app=oauth-openshift`
  - \* Ensures the updated list of identity providers is loaded.
  - \* Verify login works for htpasswd user
  - \* Log in via console using testuser.
  - \* Confirm the user is created:
  - \* `oc get user testuser`

**NEW QUESTION # 33**

Kubeconfig Management - Approve CSR

**Answer:**

Explanation:

See the solution below in Explanation:

Explanation:

Step 1: Identify the pending certificate signing request.

The lab names it audit-csr.

Step 2: Run the approval command:

```
oc adm certificate approve audit-csr
```

Step 3: Confirm approval.

The lab output shows:

```
certificatesigningrequest.certificates.k8s.io/audit-csr approved
```

Detailed explanation:

In Kubernetes and OpenShift, a CSR must be approved before the requester can use the signed certificate for authentication. This

Task approves the CSR named audit-csr, which is likely associated with the audit user or service account access flow in the lab.

Certificate-based authentication is commonly used for kubeconfig access because it enables secure client identity without relying solely on tokens. Until the CSR is approved, the certificate cannot be trusted by the cluster API for authenticated operations.

Administrative approval is therefore a gatekeeping step that ensures only intended certificate requests become valid credentials. This

Task is part of a broader kubeconfig workflow that continues with setting credentials and defining context.

### NEW QUESTION # 34

Install OADP Operator and verify Velero components

Task Information : Install the OADP operator and confirm Velero pods/components are running.

**Answer:**

Explanation:

See the solution below in Explanation:

Explanation:

\* Install OADP via Web Console

\* Operators # OperatorHub # search OADP / OpenShift API for Data Protection # Install

\* Explanation: This operator manages Velero and backup integrations.

\* Verify the operator CSV is installed

```
* oc get csv -A | grep -i -E "oadp|data protection|velero"
```

\* Confirms installation succeeded.

\* Verify pods in the OADP namespace (commonly openshift-adp)

```
* oc get pods -n openshift-adp
```

\* You should see Velero/OADP-related pods in Running state.

### NEW QUESTION # 35

Resolve group synchronization conflicts (prune stale data)

Task Information : Run group sync with pruning to remove stale OpenShift group memberships that no longer exist in LDAP.

**Answer:**

Explanation:

See the solution below in Explanation:

Explanation:

\* Run group sync with prune controls

```
* oc adm groups sync --sync-config=groupsync.yaml --confirm --prune-whitelist=/tmp/whitelist.txt
```

\* Prune removes stale memberships/groups, but whitelist protects selected groups from pruning.

\* Verify group membership reflects LDAP

```
* oc describe group < groupname >
```

\* Confirms removed users are no longer listed.

### NEW QUESTION # 36

Export and import a Kubernetes application (YAML export)

Task Information : Export typical app objects from orders and apply them into a new namespace orders- copy.

**Answer:**

Explanation:

See the solution below in Explanation:

Explanation:

- \* Export objects to YAML
- \* `oc -n orders get deploy,svc,route,cm,secret -o yaml > orders-app.yaml`
- \* Exports key application resources.
- \* Create target namespace
- \* `oc new-project orders-copy`
- \* Apply exported YAML
- \* `oc -n orders-copy apply -f orders-app.yaml`
- \* Recreates resources (some fields may need adjustment, like namespaces or immutable fields).
- \* Validate
- \* `oc -n orders-copy get all`

## NEW QUESTION # 37

.....

By selecting our EX380 study materials, you do not need to purchase any other products. Our passing rate may be the most attractive factor for you. Our EX380 learning guide have a 99% pass rate. This shows what? As long as you use our products, you can pass the exam! Do you want to be one of 99? Quickly purchase our EX380 Exam Questions! And you will find that the coming exam is just a piece of cake in front of you.
