素敵なFCP_FAZ_AN-7.6関連日本語内容試験-試験の準備方法-効率的なFCP_FAZ_AN-7.6模擬体験

FCP_FAZ_AN-7.6試験に簡単に合格し、最短時間で認定資格を取得したい場合、最良の方法は、最高品質のFCP_FAZ_AN-7.6試験準備資料を購入することです。それが私たちのすることです。FCP_FAZ_AN-7.6トレーニング資料は、この分野で高い合格率を誇ることで有名です。当社の製品を選択した場合、FCP_FAZ_AN-7.6試験を100%クリアできると確信しています。確実に試験に合格する方法についてまだ頭痛の種である場合、FCP_FAZ_AN-7.6模擬試験の質問が最良の選択です。heしないで、私たちを選んでください！

Fortinet FCP - FortiAnalyzer 7.6 Analyst 認定 FCP_FAZ_AN-7.6 試験問題 (Q26-Q31):

質問 # 26

Which two FortiAnalyzer features allow you to automatically build a dataset and chart based on a filtered search result? (Choose two.)

- A. Export to Report Chart (FortiView)
- B. Dataset Library
- C. Chart Builder
- D. Custom View

正解: A、C

質問 # 27

Which statement about exporting items in Report Definitions is true?

- A. Chart exports contain associated datasets.
- B. Template exports contain associated charts and datasets.
- C. Templates can be exported.
- D. Datasets can be exported.

正解: A

質問 # 28

(Which two statements about FortiAnalyzer Fabric deployments are true? (Choose two answers))

- A. Fabric members do not forward their logs to the supervisor.
- B. Supervisors can be in high availability (HA) for redundancy purposes only.
- C. Supervisors and members must be in the same time zone.
- D. Fabric members can operate in analyzer mode only.

正解: A、D

解説:

Comprehensive and Detailed Explanation From Exact Extract of knowledge of FortiAnalyzer 7.6 Study guide documents:

B is true (members operate in analyzer mode, not collector mode): The study guide defines Fabric members as FortiAnalyzer devices that "retain access to the features described in the FortiAnalyzer Administration Guide" and that "each member can create or raise incidents and events." In contrast, it states that a FortiAnalyzer operating in collector mode "does not provide capabilities for event management or reporting," and also notes that "in collector mode, the GUI doesn't include FortiView, Reports, or Incidents & Events." Since Fabric members must be able to generate/manage incidents and events, they must be operating with analyzer capabilities rather than collector-only functionality.

C is true (members do not forward their logs to the supervisor): The supervisor provides centralized visibility, but the study guide describes the supervisor's log access as viewing logs collected on members, not receiving/storing forwarded log files. It states: "In the FortiAnalyzer Fabric supervisor, Log View displays logs collected on all FortiAnalyzer Fabric members," and clarifies "the logs contain the same information as displayed in the host FortiAnalyzer device they were collected on." This indicates the logs remain on the member (host) and are made visible to the supervisor for centralized monitoring rather than being forwarded and stored on the supervisor.

For completeness, the study guide also explicitly states "HA is not available on the supervisor" (so A is false) and members do not need the same time zone as the supervisor (so D is false).

質問 # 29

Which statement about sending notifications with incident update is true?

- A. If you use multiple fabric connectors, all connectors must have the same settings.
- B. Notifications can be sent only when an incident is updated or deleted.
- C. You can send notifications to multiple external platforms.
- D. Notifications can be sent only by email.

正解: C

解説:

In FortiOS and FortiAnalyzer, incident notifications can be sent to multiple external platforms, not limited to a single method such as email. Fortinet's security fabric and integration capabilities allow notifications to be sent through various fabric connectors and third-party integrations. This flexibility is designed to ensure that incident updates reach relevant personnel or systems using preferred communication channels, such as email, Syslog, SNMP, or integration with SIEM platforms.

Let's review each answer option for clarity:

* Option A: You can send notifications to multiple external platforms

* This is correct. Fortinet's notification system is capable of sending updates to multiple platforms, thanks to its support for fabric connectors and external integrations. This includes options such as email, Syslog, SNMP, and others based on configured connectors.

* Option B: Notifications can be sent only by email

* This is incorrect. Although email is a common method, FortiOS and FortiAnalyzer support multiple notification methods through

various connectors, allowing notifications to be directed to different platforms as per the organization's setup.

* Option C: If you use multiple fabric connectors, all connectors must have the same settings

* This is incorrect. Each fabric connector can have its unique configuration, allowing different connectors to be tailored for specific notification and integration requirements.

* Option D: Notifications can be sent only when an incident is updated or deleted

* This is incorrect. Notifications can be sent upon the creation of incidents, as well as upon updates or deletion, depending on the configuration.

* According to FortiOS and FortiAnalyzer 7.4.1 documentation, notifications for incidents can be configured across various platforms by using multiple connectors, and they are not limited to email alone. This capability is part of the Fortinet Security Fabric, allowing for a broad range of integrations with external systems and platforms for effective incident response.

質問 # 30

You created a playbook on FortiAnalyzer that uses a FortiOS connector.

When configuring the FortiGate side, which type of trigger must be used so that the actions in an automation stitch are available in the FortiOS connector?

- A. Fabric Connector event
- B. FortiOS Event Log
- C. FortiAnalyzer Event Handler
- **D. Incoming webhook**

正解: D

解説:

When using FortiAnalyzer to create playbooks that interact with FortiOS devices, an Incoming Webhook trigger is required on the FortiGate side to make the actions in an automation stitch accessible through the FortiOS connector. The incoming webhook trigger allows FortiAnalyzer to initiate actions on FortiGate by sending HTTP POST requests to specified endpoints, which in turn trigger automation stitches defined on the FortiGate.

Here's an analysis of each option:

* Option A: FortiAnalyzer Event Handler

* This is incorrect. The FortiAnalyzer Event Handler is used within FortiAnalyzer itself for handling log events and alerts, but it does not trigger automation stitches on FortiGate.

* Option B: Fabric Connector event

* This is incorrect. Fabric Connector events are related to Fortinet's Security Fabric integrations but are not specifically used to trigger FortiGate automation stitches from FortiAnalyzer.

* Option C: FortiOS Event Log

* This is incorrect. While FortiOS event logs can be used for monitoring, they are not designed to trigger automation stitches directly from FortiAnalyzer.

* Option D: Incoming webhook

* This is correct. The Incoming Webhook trigger on FortiGate enables it to receive requests from FortiAnalyzer, allowing playbooks to activate automation stitches defined on the FortiGate device. This method is commonly used to integrate actions from FortiAnalyzer to FortiGate via the FortiOS connector.

* According to FortiOS and FortiAnalyzer documentation, when integrating FortiAnalyzer playbooks with FortiGate automation stitches, the recommended trigger type on FortiGate is an Incoming Webhook, allowing FortiAnalyzer to interact with FortiGate's automation framework through the FortiOS connector.

質問 # 31

.....

業種別の人々は自分が将来何か成績を作るようにずっと努力しています。IT業種で勤めているあなたもきっとずっと努力して自分の技能を向上させているでしょう。では、最近最も人気があるFortinetのFCP_FAZ_AN-7.6認定試験の認証資格を既に取りましたか。FCP_FAZ_AN-7.6試験に対して、あなたはいくらぐらい分かっていますか。もしこの試験に関連する知識が非常に不足であると同時にこの試験に合格したい場合、あなたはどのようなつもりですか。そうですか。どうするか全然分からないですか。そうしても焦らないでください。Jpexamはあなたに援助を提供します。
