

Test 1z0-1093-25 Dumps - Pass Guaranteed 1z0-1093-25 - Oracle Cloud Database Services 2025 Professional First-grade Exam Passing Score

1Z0-1093-25 Oracle Cloud Database Services 2025 Professional

1. What is the NoSQL Handle interface NOT used for?
 - A. to access multiple tables
 - B. to set the row retention time
 - C. to get rows from a table to
 - D. to get dynamic information on a table

2. Which statement is true about scaling OCPUs for a Virtual Machine DB System?
 - A. Scaling the OCPUs of a Virtual Machine DB System requires you to migrate to a new DB System.
 - B. Scaling the OCPUs of a Virtual Machine DB System requires that the shape of the system be changed, which can be done online.
 - C. For a 2-node RAC Virtual Machine DB System, the shape of the VMs changes without needing to reboot the VM nodes.
 - D. Scaling the OCPUs of a Virtual Machine DB System requires that the shape of the DB system be changed.

3. Which statement is true about scaling storage for a Virtual Machine DB System?
 - A. You can independently scale the storage used by the VM DB System but the Available Data storage size cannot be decreased, whereas the Recovery Area storage size can be decreased.
 - B. You must concurrently scale up the storage used by the VM DB System for the Available Data storage size and the Recovery Area storage size.
 - C. You must concurrently scale up or down the storage used by the VM DB System for the Available Data storage size and the Recovery Area storage size.
 - D. You can independently scale the storage used by the VM DB System but the Available Data storage size and Recovery Area storage size cannot be decreased.

4. What three capabilities does the database fleet summary provide?
 - A. Execute a DDL command on the databases.
 - B. View the current database resource usage.
 - C. View the status of the databases.
 - D. View database log entries.
 - E. Migrate databases to OCI.
 - F. Compare database performance metrics over time.

5. What can you use to enable an on-premises Enterprise Manager instance to monitor Exadata Database Service in a Private Oracle Cloud Infrastructure (OCI) Subnet?
 - A. Virtual Network Interface Card (VNIC)
 - B. Virtual Cloud Network (VCN)
 - C. Client Subnet
 - D. FastConnect

6. Which two actions does the Cloud Exadata Infrastructure Resource NOT allow you to do?
 - A. Enabling Database Compute and Storage server expansion
 - B. Providing customers access to the Exadata Storage servers
 - C. Allowing customers to schedule Automatic Infrastructure maintenance
 - D. Allowing customers to execute Infrastructure maintenance

7. You want to protect all the network communications between your organization network and Oracle Cloud using secure encryption and integrity algorithms. Which two statements are correct?
 - A. You should purchase TDE for your cloud environment.

What's more, part of that NewPassLeader 1z0-1093-25 dumps now are free: <https://drive.google.com/open?id=1To91fGlehP48mCPe9i5GCPvrDyT1E7Xy>

NewPassLeader 1z0-1093-25 Desktop Practice Exam Software: In the Desktop 1z0-1093-25 practice exam software version of 1z0-1093-25 practice test is updated and real. The software is useable on Windows-based computers and laptops. There is a demo of the Oracle Cloud Database Services 2025 Professional (1z0-1093-25) practice exam which is totally free. Oracle 1z0-1093-25 practice test is very customizable and you can adjust its time and number of questions.

Oracle 1z0-1093-25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> • Exadata Database Service (ExaDB): This section of the exam measures the skills of a Database Infrastructure Engineer and focuses on the advanced Exadata Database Service. It includes the provisioning of Exadata systems, management of Exadata Cloud Infrastructure, and VM Cluster administration. It also evaluates knowledge of lifecycle management tasks and how to interact with various Exadata management utilities and interfaces.

Topic 2	<ul style="list-style-type: none"> MySQL HeatWave Technical Overview: This section of the exam measures the skills of a MySQL Cloud Specialist and introduces MySQL HeatWave, Oracle's high-performance analytics engine for MySQL. It includes provisioning, migrating existing MySQL databases to HeatWave, and working with its analytical and machine-learning capabilities. It also covers day-to-day operational activities within the MySQL HeatWave environment.
Topic 3	<ul style="list-style-type: none"> NoSQL Database Service Technical Overview: This section of the exam measures the skills of a NoSQL Developer and explores Oracle's NoSQL Database Service. It includes understanding the basics of NoSQL architecture, handling table-level security, rate limiting, and data modeling. It also covers concepts like provisioned throughput and the usage of language SDKs for interacting with NoSQL services on Oracle Cloud.
Topic 4	<ul style="list-style-type: none"> Base Database Service - VM (BaseDB): This section of the exam measures the skills of a Cloud Database Administrator and covers the foundational elements of Oracle's Base Database Service. It includes understanding what the BaseDB service is, how to provision and manage it, and lifecycle operations such as backups, recovery, patching, and upgrades. It also tests familiarity with monitoring and management interfaces used to control and observe the BaseDB environment.
Topic 5	<ul style="list-style-type: none"> Oracle Cloud Infrastructure Database Management Service: This section of the exam measures the skills of a Cloud Operations Analyst and provides insight into Oracle's Database Management Service on OCI. It focuses on enabling the service for databases, monitoring their performance, and performing diagnostic and tuning activities. It also covers tasks related to the administration of databases running on Oracle Cloud Infrastructure.

Easily Accessible Oracle 1z0-1093-25 PDF

Our Oracle 1z0-1093-25 practice exam software is the most impressive product to learn and practice. We have a team of professional software developers to ensure the software's productivity. After installation, Oracle 1z0-1093-25 Practice Exam software is used without an internet connection.

Oracle Cloud Database Services 2025 Professional Sample Questions (Q60-Q65):

NEW QUESTION # 60

Which two tools can you use to create a HeatWave MySQL Database Service System?

- A. OCI SQL Developer
- **B. OCI Console**
- C. MySQL Shell on OCI Compute
- D. OCI Bastion Server
- **E. OCI Command Line Interface**

Answer: B,E

Explanation:

OCI Console:

The Oracle Cloud Infrastructure Console is the primary graphical interface for creating and managing MySQL HeatWave Database Service Systems. It provides a user-friendly environment for configuring database instances and integrating HeatWave.

OCI CLI:

The OCI Command Line Interface allows for automation and scripting of database service creation. It is useful when managing multiple instances or performing bulk operations.

Why the other options are incorrect:

- * C:OCI Bastion Server is used for secure SSH access, not for database creation.
- * D:MySQL Shell is a client tool for interacting with databases, not for provisioning them.
- * E:OCI SQL Developer is a database management tool, not a service provisioning tool.

NEW QUESTION # 61

Which two of the following statements are true regarding security considerations for managing Exadata Cloud Infrastructure and VM Clusters?

- A. Customers are responsible for configuring and maintaining the security of the operating system and database software within the VM Clusters.
- B. Network Security Groups (NSGs) can be used to control network traffic to and from VM Clusters, enhancing security.
- C. Customers are responsible for configuring host-based firewalls on the Exadata Infrastructure to protect against unauthorized access.
- D. Oracle manages all security aspects of the Exadata Infrastructure, relieving customers of any security responsibilities.
- E. Customers have full access to the Exadata Infrastructure's hypervisor and can implement custom security policies.

Answer: A,B

Explanation:

B: Network Security Groups (NSGs) for traffic control:

- * NSGs allow customers to define ingress and egress rules to control network traffic.
- * Enhances security by restricting access to only authorized IP ranges and protocols.
- * Applied at the VM Cluster level to manage connectivity efficiently.

E: Responsibility for OS and database security:

- * While Oracle manages the infrastructure layer, customers are responsible for securing the operating system and database within the VM Clusters.
- * This includes applying security patches, configuring firewalls, and implementing user access controls.

Why the other options are incorrect:

- * A. Host-based firewalls on Exadata Infrastructure: Oracle, not the customer, configures the infrastructure-level security.
- * C. Oracle managing all security: Incorrect, as customers manage VM-level security.
- * D. Access to hypervisor: Customers do not have hypervisor-level access for security configuration.

NEW QUESTION # 62

What primary security mechanism within Oracle NoSQL Database Cloud Service governs access to individual tables, dictating which users or groups can perform specific actions?

- A. Virtual Cloud Network (VCN) security lists
- B. Transparent Data Encryption (TDE)
- C. Database Vault
- D. Identity and Access Management (IAM) policies

Answer: D

Explanation:

IAM Policies:

Oracle NoSQL Database Cloud Service uses OCI IAM policies to control access to tables. These policies specify who (user or group) can perform what actions (read, write, delete) on specific database resources. This centralized approach allows for granular permission control, supporting the principle of least privilege.

IAM policies are configured at the OCI tenancy level and can be customized to define access based on users, groups, and dynamic groups. They are essential for maintaining secure data access, especially in multi-tenant environments.

Why the other options are incorrect:

- * A: VCN security lists control network traffic, not table-level access.
- * C: Database Vault is for fine-grained access control within traditional Oracle Databases, not NoSQL.
- * D: TDE handles data encryption, not access management.

NEW QUESTION # 63

You need to implement a backup and recovery strategy for your MySQL HeatWave Database System. What is the recommended method for backing up and restoring your HeatWave cluster?

- A. Using the OCI Object Storage service for storing manual database dumps.
- B. Manually copying the data files from the HeatWave cluster's storage.

- C. Utilizing OCI Database backups, which include both the MySQL Database System and the HeatWave cluster.
- D. Relying solely on MySQL replication to another MySQL instance.
- E. Using the MySQL Enterprise Backup tool directly on the HeatWave nodes.

Answer: C

Explanation:

C: Utilizing OCI Database backups:

- * Integrated with Oracle Cloud Infrastructure (OCI), providing consistent and complete backups.
- * Supports both the MySQL Database System and the HeatWave cluster, ensuring data integrity.
- * Automates backup scheduling and retention policies.
- * Facilitates easy restoration in case of data loss or corruption.

Why the other options are incorrect:

- * A. Manual copying: Prone to errors and lacks consistency.
- * B. Manual dumps to Object Storage: Labor-intensive and not automated.
- * D. MySQL replication: Suitable for high availability, but not a substitute for regular backups.
- * E. MySQL Enterprise Backup on nodes: Complex and not designed for HeatWave's distributed environment.

NEW QUESTION # 64

In a BaseDB environment configured with automatic backups, what happens to the automatic backups when the DB system is terminated?

- A. The most recent automatic backup is retained, while older backups are deleted.
- B. Automatic backups are migrated to a lower-cost archive storage tier.
- C. All automatic backups are immediately and permanently deleted from object storage.
- D. The retention of automatic backups after DB system termination is configurable during DB system creation.
- E. All automatic backups are retained in object storage for a period determined by the original backup retention policy.

Answer: E

Explanation:

Backup Retention Policy:

When a BaseDB system is terminated, automatic backups are not immediately deleted. Instead, they remain stored in OCI Object Storage for the duration specified by the backup retention policy that was configured at the time of database creation.

- * This approach ensures that data can be recovered even after the database instance itself is terminated.
- * Administrators can manually delete backups if they are no longer needed, but they are not automatically purged.

Why the other options are incorrect:

- * A: Backups are not deleted instantly upon termination.
- * B: All backups are retained as per the policy, not just the most recent.
- * D: No automatic migration to archive tier occurs.
- * E: Backup retention settings are defined during provisioning, but not dynamically configurable after termination.

NEW QUESTION # 65

.....

Oracle Cloud Database Services 2025 Professional (1z0-1093-25) Practice exams (desktop and web-based) are designed solely to help you get your Oracle Cloud Database Services 2025 Professional (1z0-1093-25) certification on your first try. Our Oracle 1z0-1093-25 mock test will help you understand the Oracle Cloud Database Services 2025 Professional (1z0-1093-25) exam inside out and you will get better marks overall. It is only because you have practical experience of the Oracle Cloud Database Services 2025 Professional (1z0-1093-25) exam even before the exam itself.
