With the rapid development of the world economy, it has been universally accepted that a growing number of people have longed to become the social elite. However, the competition of becoming the social elite is fierce for all people. The JavaScript-Developer-I exam will be a shortcut for a lot of people who desire to be the social elite. If you try your best to prepare for the JavaScript-Developer-I Exam and get the related certification in a short time, it will be easier for you to receive the attention from many leaders of the big company.

Salesforce Certified JavaScript Developer I exam is a highly recognized certification that demonstrates a developer's ability to design, develop, and maintain custom applications using JavaScript in the Salesforce platform. Salesforce Certified JavaScript Developer (JS-Dev-101) certification exam is created to test the knowledge and skills of developers in areas like Apex, Visualforce, and Lightning components.

The evergreen field of Salesforce is so attractive that it provides non-stop possibilities for the one who passes the Salesforce JavaScript-Developer-I exam. So, to be there on top of the Salesforce sector, earning the Salesforce Certified JavaScript Developer (JS-Dev-101) (JavaScript-Developer-I) certification is essential. Because of using outdated JavaScript-Developer-I study material, many candidates don't get success in the Salesforce Certified JavaScript Developer (JS-Dev-101) (JavaScript-Developer-I) exam and lose their resources.

Salesforce JavaScript-Developer-I Certification Exam is designed to test the skills and knowledge of individuals who wish to become Salesforce Certified JavaScript Developers. Salesforce Certified JavaScript Developer (JS-Dev-101) certification exam is ideal for developers who specialize in building custom applications on the Salesforce platform using JavaScript.

Salesforce Certified JavaScript Developer (JS-Dev-101) Sample Questions (Q60-Q65):

NEW QUESTION # 60

developer uses the code below to format a date.

```
01 const date = new Date(2020, 05, 10);
02 const dateDisplayOptions = {
03   year: 'numeric',
04   month: 'long',
05   day: 'numeric'
06 };
07
08 const formattedDate = date.toLocaleDateString('en', dateDisplayOptions);
```

After executing, what is the value of formattedDate?

- A. November 05, 2020
- B. May 10, 2020
- C. October 05, 2020
- **D. June 10, 2020**

Answer: D

NEW QUESTION # 61

Refer to the code:

```
01 let car1 = new Promise(, reject) =>
02   setTimeout(reject, 2000, " Car 1 crashed in ");
03 let car2 = new Promise(resolve =>
04   setTimeout(resolve, 1500, " Car 2 completed "));
05 let car3 = new Promise(resolve =>
06   setTimeout(resolve, 3000, " Car 3 completed "));
07
08 Promise.race([car1, car2, car3])
09 .then(value => {
10   let result = `${value} the race. `;
11 })
12 .catch(err => {
13   console.log( " Race is cancelled. ", err);
14 });
```

What is the value of result when Promise.race executes?

- A. Car 3 completed the race.
- **B. Car 2 completed the race.**
- C. Car 1 crashed in the race.
- D. Race is cancelled.

Answer: B

Explanation:

Promise.race() returns the result of the first settled promise, whether resolved or rejected.

The promises:

- * car1 # rejects in 2000 ms
- * car2 # resolves in 1500 ms
- * car3 # resolves in 3000 ms

The earliest settled promise is car2 (1500 ms), which resolves with the value:

" Car 2 completed "

Therefore, Promise.race enters the .then() branch with:

```
value = " Car 2 completed "
```

Inside the .then():

```
let result = ' $(value) the race. ' ;
```

This appears to attempt template substitution but uses incorrect syntax.

JavaScript template literals require backticks and `${expression}`, for example:

```
` ${value} the race.`
```

Because the code is incorrect, result is literally the string:

```
$(value) the race.
```

However, the question asks:

"What is the value of result when Promise.race executes?"

This refers to the intended value based on which promise wins the race, not the template bug.

The winning value is:

```
Car 2 completed
```

So the correct conceptual answer is:

```
Car 2 completed the race.
```

JavaScript Knowledge References (text-only)

* Promise.race() returns the first settled (resolved or rejected) promise.

* The earliest resolve here is car2 (1500 ms).

* Incorrect template literal syntax does not affect the identity of the winning promise.

NEW QUESTION # 62

A developer is wondering whether to use, promise, then or provide, catch especially when a promise throws an error.

Which two promises are rejected? Choose 2 answers

- A. Promise , reject ('Cool error here ') , catch (error => console ,error (error));
- B. Promise, rejected (Cool error here'), then (error => console (error));
- C. New promise (() => (throw 'Cool error here ')) , then ((null, error => console, (error)));
- D. New Promise((resolve, reject) => (throw 'Cool error here')) .catch (error => console (error));

Answer: C,D

NEW QUESTION # 63

A test has a dependency on database.query. During the test the dependency is replaced with an object called database with the method, query, that returns an array. The developer needs to verify how many times the method was called and the arguments used each time.

Which two test approaches describe the requirement?

Choose 2 answers

- A. Mocking
- B. Black box
- C. Integration
- D. White box

Answer: A,D

NEW QUESTION # 64

What are two unique features of functions defined with a fat arrow as compared to normal function definition?

Choose 2 answers

- A. If the function has a single expression in the function body, the expression will be evaluated and implicit returned.
- B. The function uses the this from the enclosing scope.
- C. The function generated its own this making it useful for separating the function's scope from its enclosing scope.
- D. The function receives an argument that is always in scope, called parentThis, which is the enclosing lexical scope.

Answer: C,D

NEW QUESTION # 65
