Salesforce B2C-Commerce-Architect Reliable Dumps Sheet | B2C-Commerce-Architect Reliable Exam Pattern

PrepAwayExam is a reliable site offering the B2C-Commerce-Architect valid study material supported by 100% pass rate and full money back guarantee. Besides, our B2C-Commerce-Architect training material is with the high quality and can simulate the actual test environment, which make you feel in the real test situation. You can get the latest information about the B2C-Commerce-Architect real test, because our PrepAwayExam will give you one year free update. You can be confident to face any difficulties in the B2C-Commerce-Architect actual test no matter any changes.

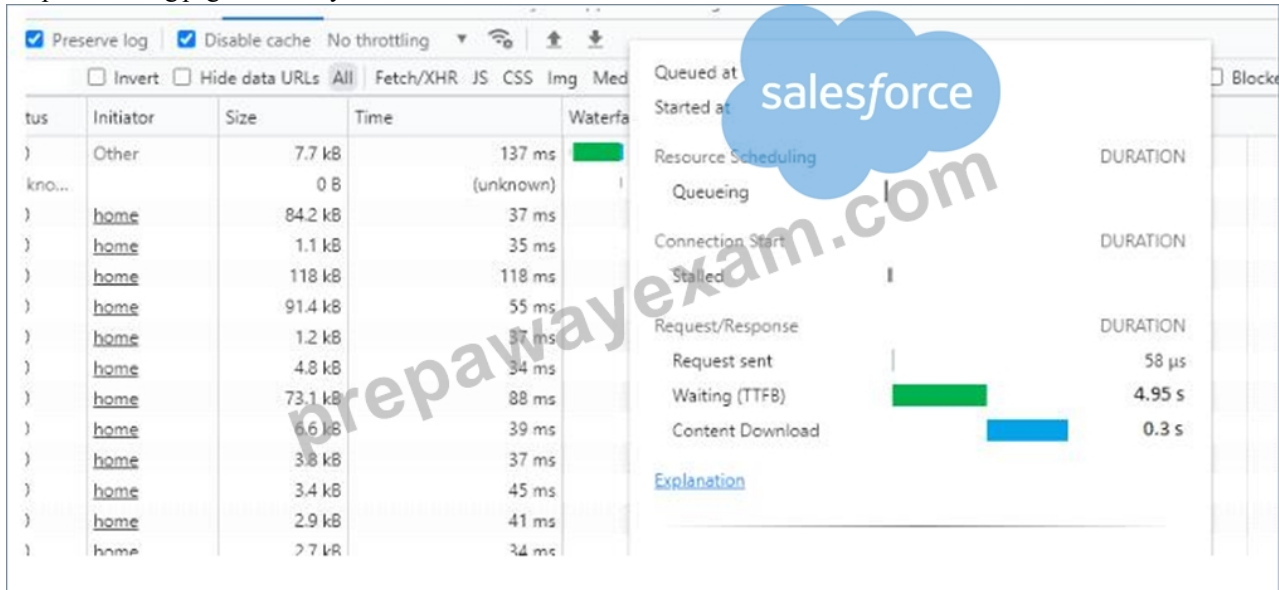

Salesforce B2C-Commerce-Architect Certification Exam is designed for professionals who want to validate their expertise and skills in designing and implementing complex B2C commerce solutions using Salesforce Commerce Cloud. B2C-Commerce-Architect exam evaluates the candidate's ability to design and implement scalable and reliable commerce solutions that meet the needs of the business and customers. Salesforce Certified B2C Commerce Architect certification is ideal for architects who have experience working with Salesforce Commerce Cloud and want to demonstrate their knowledge of best practices and industry standards.

Salesforce Certified B2C Commerce Architect Sample Questions (Q50-Q55):

NEW QUESTION # 50

You're in charge of identifying a bottleneck in the network chain. Given this Google Dev Tools screenshot of a particular request in

the product listing page. What may be the root cause?

- A. Good indication of a local network or browser issue.
- B. Internet connection intermittently drops out.
- C. Probably the issue is on the server side and needs further investigation from a code perspective.
- D. Everything works as expected. All parameters are within pre-established limits.

Answer: C

NEW QUESTION # 51

The Client is creating a new Storefront and their requirements include:

- * ApplePay support
- * Log -in through a standard OAuth2 social media account
- * One Click checkout process
- * A/B testing for promotions

Which two items require technical documentation for customizing the Storefront Reference Architecture?

Choose 2 answers

- A. A/B testing for promotions
- B. log in through a standard OAuth2 social media account
- C. ApplePay support
- D. One Click checkout process

Answer: B,D

Explanation:

For customizing the Storefront Reference Architecture to meet specific requirements, the following items would require detailed technical documentation:

Option A (One Click checkout process): Implementing a one-click checkout process involves significant customization to streamline the checkout flow, potentially requiring integration with payment providers and modifications to the user session management.

Option C (Log in through a standard OAuth2 social media account): Integrating OAuth2 for social media logins involves handling authentication tokens, user sessions, and potentially syncing user data with the B2C Commerce profiles, all of which require detailed security and integration documentation.

These customizations require careful planning and implementation to ensure they work seamlessly with existing Storefront Reference Architecture components and meet security standards.

NEW QUESTION # 52

During code review, the Architect found that there is a service call on every visit of the product detail page (PDP).

What best practices should the Architect ensure are followed for the service configuration?

Choose 2 answers

- A. Service mock up call is configured.
- B. Service timeout is set.
- C. Service logging is disabled.
- D. Circuit breaker is enabled.

Answer: A

Explanation:

For logging practices in a complex LINK cartridge integration, the recommendation is:

Get logger for cartridge-specific category (C): This practice allows for more precise and relevant logging by focusing on the specific cartridge, making troubleshooting more efficient.

Report debug level message for the back-end asynchronous communication: This ensures that all detailed interactions are logged, providing valuable data for diagnosing issues.

Report all errors at error level message: This categorizes all critical issues under error logs, which is essential for quick identification and resolution of problems affecting the system's operations.

This structured logging strategy enhances the ability to monitor and troubleshoot the system effectively, especially in complex integrations where multiple components interact asynchronously.

NEW QUESTION # 53

A Client has automated builds that deploy the code; however, recent builds started failing with compilation issues, which are not reproducible in developer's environment.

What first step needs to be taken to identify and fix the issue?

- A. Verify the modules versions used to generate the code.
- B. Clean up build server work space and run job again.
- C. Recreate the job in the build server to verify compilation issues.
- D. Verify the generated JavaScript and CSS for the build.

Answer: B

Explanation:

When facing build failures that are not reproducible in developers' environments, a common and effective first step is to clean up the build server workspace (Answer A). This action clears any residual files, settings, or data that might be influencing the build process and causing discrepancies between local and server builds. By resetting the workspace to a clean state, it helps ensure that the build process is starting from a consistent base, potentially resolving issues caused by stale data or corrupted build artifacts. This step often resolves hidden configuration or environment-specific issues that are not immediately apparent in the code or module versions.

NEW QUESTION # 54

During a load test the storefront shows steady but slow performance on all the pages being tested. The Architect opens Pipeline Profiler and sorts the data by "total time" column. The following come as the top Ave items:

Controller Name	Function Name	Hits	Total Time	Average Time	Maximum Time
Product	Detail	38,880	23,606,640	607	2,311
Search	Show	32,400	15,090,360	464	1,143
Home	IncludeHeaderMenu	3,184	10,776,564	2,079	2,200
Product	HitTile	239,760	7,944,480	33	245
Product	ShowInCategory	38,880	2,663,280	69	100

Which controller should the Architect focus on to further investigate the performance issue?

- A. Product-Detail as It has the highest total time and highest maximum time.
- B. Home-IncludeHeaderMenu as It has highest average time.
- C. Search Show as this is one of the key controllers that the customer uses
- D. Product-HitTile as it has the highest hits during the load test.

Answer: A

Explanation:

Focusing on the 'Product-Detail' controller is prudent given that it has the highest total time and the highest maximum time (Answer A), suggesting that it significantly contributes to the overall load and potential slowdowns on the site. By analyzing and optimizing this controller, the architect can potentially achieve the most substantial improvement in performance. Efforts might include optimizing
