KaoGuTi是一個對ISA ISA-IEC-62443 認證考試提供針對性培訓的網站。KaoGuTi也是一個不僅能使你的專業知識得到提升，而且能使你一次性通過ISA ISA-IEC-62443 認證考試的網站。KaoGuTi提供的培訓資料是由很多IT資深專家不斷利用自己的經驗和知識研究出來的，品質很好，準確性很高。一旦你選擇了我們KaoGuTi，不僅能夠幫你通過ISA ISA-IEC-62443 認證考試和鞏固自己的IT專業知識，還可以享用一年的免費售後更新服務。

最新的 ISA Cybersecurity ISA-IEC-62443 免費考試真題 (Q14-Q19):

問題 #14

If a system integrator is designing zones and conduits for an IACS network based on risk assessments, which part of the ISA/IEC 62443 standard guides this process?

- A. Part 4-1: Secure product development lifecycle requirements
- **B. Part 3-2: Security risk assessment for system design**
- C. Part 2-1: Establishing an IACS security program
- D. Part 1-3: System security conformance metrics

答案： B

解題說明：

ISA/IEC 62443-3-2 specifically provides methodology and guidance for performing risk assessments and defining zones and conduits based on those assessments.

"This standard describes a process for conducting a cybersecurity risk assessment and defines the concept of zones and conduits for segmenting IACS. It provides guidance for assigning security levels and designing mitigation strategies accordingly."

- ISA/IEC 62443-3-2:2020, Clause 5.3 - Zones and Conduits

It is the key reference for system integrators during design and architecture phases of IACS security.

問題 #15

Authorization (user accounts) must be granted based on which of the following?

Available Choices (select all choices that are correct)

- A. Individual preferences
- B. System complexity
- C. Common needs for large groups
- **D. Specific roles**

答案: D

解題說明:

Authorization is the process of granting or denying access to a network resource or function. Authorization (user accounts) must be granted based on specific roles, which are defined as sets of permissions and responsibilities assigned to a user or a group of users. Roles should be based on the principle of least privilege, which means that users should only have the minimum level of access required to perform their tasks. Roles should also be based on the principle of separation of duties, which means that users should not have conflicting or overlapping responsibilities that could compromise the security or integrity of the system.

Authorization based on individual preferences or common needs for large groups is not recommended, as it could lead to excessive or unnecessary access rights, or to inconsistent or conflicting policies. Authorization based on system complexity is also not a good criterion, as it could result in overcomplicated or unclear roles that are difficult to manage or audit. References:

問題 #16

What is the name of the missing layer in the Open Systems Interconnection (OSI) model shown below?

- A. User
- B. Control
- C. Protocol
- **D. Transport**

答案: D

解題說明:

The Open Systems Interconnection (OSI) model is a framework that describes the functions of a networking system. The OSI model categorizes the computing functions of the different network components, outlining the rules and requirement needed to support the interoperability of the software and hardware that make up the network¹.

The OSI model consists of seven abstraction layers arranged in a top-down order: Physical, Data Link, Network, Transport, Session, Presentation, and Application. The Transport layer is the fourth layer in the OSI model, and it is responsible for ensuring reliable and efficient data transfer between the Network layer and the Session layer². The Transport layer uses protocols such as Transmission Control Protocol (TCP) and User Datagram Protocol (UDP) to provide end-to-end communication services, such as error detection and correction, flow control, congestion control, and segmentation².

The image that you sent shows a 3D representation of the OSI model, with the layers stacked on top of each other. The missing layer is the Transport layer, which is represented by a pink box with a white arrow pointing to it. The arrow is labeled "TCP, UDP".

問題 #17

Which part of the standard provides a list of possible Foundational Requirements to address assessed risks?

- A. ISA/IEC 62443-3-2

- B. ISA/IEC 62443-3-4
- C. ISA/IEC 62443-3-1
- **D. ISA/IEC 62443-3-3**

答案： D

解題說明：

ISA/IEC 62443-3-3 provides the list of Foundational Requirements (FRs) for IACS cybersecurity, mapping security controls to each FR to address risks identified during the risk assessment process. The seven FRs include: Identification & Authentication Control (IAC), Use Control (UC), System Integrity (SI), Data Confidentiality (DC), Restricted Data Flow (RDF), Timely Response to Events (TRE), and Resource Availability (RA).

Reference: ISA/IEC 62443-3-3:2013, Section 4.3 and Table 3 ("List of Foundational Requirements").

問題 #18

At Layer 4 of the Open Systems Interconnection (OSI) model, what identifies the application that will handle a packet inside a host?

Available Choices (select all choices that are correct)

- A. ATCP/UDP registry number
- B. A TCP/UDP host ID
- **C. ATCP/UDP port number**
- D. ATCP/UDP application ID

答案： C
