

2026 Efficient Workday Workday-Prism-Analytics: Valid Workday Pro Prism Analytics Exam Exam Topics

WORKDAY PRISM ANALYTICS – OVERVIEW CONTINUED...

I have covered the few terminology used in Prism and provided equivalent in Database for just understanding purpose. There are some more like Prism Security group etc.

Term	Definition	Database
Base Data Set	A BDS stores data that represent in tabular format but there is more difference between table and BDS.	External Table
Table	A table stores data that represent in tabular format. It has more features than BDS	Table
Prism Calculated Field	It is a calculated field that is applied in a existing data.	Functions
Derived Data Set	It may be combined with BDS, Table, DDS that is created already.	SQL View
Published Data Set	The PDS creates snapshot of the data from DDS and creates Prism data source which can then be used in Workday applications.	Materialized SQL View

I have provided details about Prism APIs which we are going to use it for migrating data from 3rd party systems to Workday Prism Analytics. We are not going to compare Pros & Cons between these APIs as this can be read in Workday Administrator Guide from Workday Community.

Prism APIs	Description
V1	Version 1 APIs are used to migrate the data and store the data in Base data sets
V2& V3	Version 2 & Version 3 APIs are used to migrate the data and store the data in table. Version 3 APIs is having more features than Version 2.
Data Change Task	Data change Task APIs are used to support the latest features that is provided in the Prism Analytics.

P.S. Free & New Workday-Prism-Analytics dumps are available on Google Drive shared by TestSimulate:
<https://drive.google.com/open?id=17r-hJ0IO7Hepj1zO-s0HIKj6UbRpPki>

The advent of our Workday-Prism-Analytics exam questions with three versions has helped more than 98 percent of exam candidates get the certificate successfully. They are the PDF version, Software version and the APP online version which are co-related with the customers' requirements. All content of our Workday-Prism-Analytics Exam Materials are written based on the real exam specially. And Workday-Prism-Analytics simulating questions are carefully arranged with high efficiency and high quality. Besides, Workday-Prism-Analytics guide preparations are afforded by our considerate after-sales services.

Our practice exams are designed solely to help you get your Workday-Prism-Analytics certification on your first try. A Workday Workday-Prism-Analytics practice test will help you understand the exam inside out and you will get better marks overall. It is only because you have practical experience of the exam even before the exam itself. TestSimulate offers authentic and up-to-date study material that every candidate can rely on for good preparation. Our top priority is to help you pass the Workday Pro Prism Analytics Exam (Workday-Prism-Analytics) exam on the first try. The key to passing the Workday-Prism-Analytics exam on the first try is vigorous practice. And that's exactly what you'll get when you prepare from our material. Each format excels in its own way and helps you get success on the first attempt.

Workday-Prism-Analytics Valid Test Topics - Exam Dumps Workday-Prism-Analytics Zip

Together, the after-sale service staffs in our company share a passion for our customers, an intense focus on teamwork, speed and agility, and a commitment to trust and respect for all individuals. At present, our company is a leading global provider of Workday-Prism-Analytics preparation exam in the international market. Therefore, after buying our Workday-Prism-Analytics Study Guide, if you have any questions about our Workday-Prism-Analytics study materials, please just feel free to contact with our online after sale service staffs on our Workday-Prism-Analytics exam questions.

Workday Pro Prism Analytics Exam Sample Questions (Q31-Q36):

NEW QUESTION # 31

You explode the Language Skills multi-instance field on your derived dataset and you want to change the business object that the new Language Skills Exploded instance field is mapped to. What steps should you take?

- A. Add a Manage Fields after the Explode stage and modify the business object.
- B. Click on the Related Actions next to the business object in the insight panel.
- C. Select from the list of suggested BO values in the Explode stage configuration.
- D. Add a Manage Fields before the Explode stage and modify the business object.

Answer: A

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

In Workday Prism Analytics, the Explode stage transforms a multi-instance field (e.g., Language Skills) into multiple rows, creating a new single-instance field (e.g., Language Skills Exploded). The resulting field inherits the business object (BO) mapping from the original multi-instance field, but this mapping can be modified if needed. According to the official Workday Prism Analytics study path documents, to change the business object that the new Language Skills Exploded instance field is mapped to, you should add a Manage Fields stage after the Explode stage and modify the business object (option D).

The Manage Fields stage allows you to edit field properties, including the business object mapping, for the exploded field. After the Explode stage creates the new single-instance field, the Manage Fields stage can be used to reassign the business object by selecting a different Workday business object (e.g., changing from a generic object to a specific one like "Language"). This step ensures the field is mapped correctly for downstream reporting or integration with Workday reports.

The other options are incorrect:

- * A. Select from the list of suggested BO values in the Explode stage configuration: The Explode stage does not provide an option to modify business object mappings during its configuration; it focuses on exploding the multi-instance field.
- * B. Click on the Related Actions next to the business object in the insight panel: The insight panel provides metadata insights but does not allow direct modification of business object mappings for fields.
- * C. Add a Manage Fields before the Explode stage and modify the business object: Modifying the business object before the Explode stage affects the original multi-instance field, but the Explode stage will still create the new field with the inherited mapping, so this does not achieve the goal.

Adding a Manage Fields stage after the Explode stage is the correct approach to modify the business object mapping of the new exploded field.

NEW QUESTION # 32

A Prism data writer has to create an intermediary Prism calculated field A, used only to achieve a final result in Prism calculated field B and they only need to publish out field B. What should they do?

- A. Mark field A as intermediate calculation.
- B. Add a Manage Fields stage to the DDS and hide field B.
- C. Delete field A from their DDS and just leave field B.
- D. Add a Manage Fields stage to the DDS and hide field A.

Answer: D

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

In Workday Prism Analytics, when a data writer creates an intermediary calculated field (e.g., field A) solely to derive a final calculated field (e.g., field B) in a Derived Dataset (DDS), they may want to exclude the intermediary field from the published output to keep the dataset clean and focused. According to the official Workday Prism Analytics study path documents, the recommended approach is to add a Manage Fields stage to the DDS and hide field A. The Manage Fields stage allows users to control the visibility of fields in the dataset, enabling them to hide fields that are not needed in the final output while retaining their calculations for internal use within the dataset's transformation logic. By hiding field A, field B can still leverage field A's calculations, and only field B will be visible in the published dataset or data source.

The other options are not suitable:

A: Mark field A as intermediate calculation: There is no specific feature in Prism Analytics to "mark" a field as an intermediate calculation; this is not a supported action.

C: Add a Manage Fields stage to the DDS and hide field B: Hiding field B would defeat the purpose, as field B is the intended output to be published.

D: Delete field A from their DDS and just leave field B: Deleting field A would break the calculation of field B, as field B depends on field A, making this option infeasible.

Using the Manage Fields stage to hide field A ensures that the dataset remains functional while presenting only the necessary fields in the final output, aligning with best practices for data transformation and publishing.

NEW QUESTION # 33

While viewing your lineage, you realize you have forgotten to add a description to some of your derived datasets. From the lineage, you double-click on a dataset to view the dataset details. What is the next step to add the missing descriptions?

- A. Select the pencil icon next to the Import stage to update the description.
- B. Select the pencil icon next to the dataset name and Edit Transformations.
- C. Select Add Field from the dataset details to create a description.
- **D. Select Related Actions next to the dataset name and Edit Transformations.**

Answer: D

Explanation:

To add or update the description of a derived dataset in Workday Prism Analytics, you should access the Edit Dataset Transformations task. This can be done by selecting the Related Actions next to the dataset name and choosing Edit Transformations. This method allows you to modify various aspects of the dataset, including its description.

This process is outlined in the Workday Prism Analytics User Guide, which states:

"If you have permission to edit a dataset, you can access the Edit Dataset Transformations task using these methods:

* Right-click the dataset name on the Data Catalog report and select Edit Transformations.

* Select Edit Transformations from the Quick Actions on the View Dataset Details report.

* Access the Edit Dataset task and select the dataset name that you want to edit." Once in the Edit Dataset Transformations task, you can update the dataset's description by clicking on the configuration icon (often represented as a gear or pencil icon) and editing the description field.

NEW QUESTION # 34

A Prism data administrator needs to add an Explode stage to a derived dataset to create a new single-instance type field. What is the only field type you can select in the Explode stage?

- A. Single-Instance
- **B. Multi-Instance**
- C. Text
- D. Numeric

Answer: B

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

In Workday Prism Analytics, an Explode stage is used in a derived dataset to transform a multi-instance field into multiple rows, effectively creating single-instance fields for each instance. According to the official Workday Prism Analytics study path documents, the only field type you can select in the Explode stage is Multi-Instance (option B). A multi-instance field, often sourced from Workday data, contains multiple values for a single record (e.g., a list of certifications for a worker). The Explode stage "explodes" this field into separate rows, one for each instance, while converting the multi-instance field into a single-instance field in the output. For example, if a worker has three certifications in a multi-instance field, the Explode stage would create three rows, each with a single certification value.

The other options are incorrect:

- * A. Numeric: Numeric fields are single-instance by nature and cannot be exploded, as they do not contain multiple values.
- * C. Single-Instance: Single-instance fields contain one value per record and cannot be used in an Explode stage, which requires a multi-instance field to operate.
- * D. Text: While a Text field can be single or multi-instance, the Explode stage specifically requires a Multi-Instance field, not just any Text field.

The requirement for a Multi-Instance field in the Explode stage ensures that the transformation can properly expand the data into multiple rows as intended.

Workday Prism Analytics Study Path Documents, Section: Data Prep and Transformation, Topic: Using the Explode Stage in Derived Datasets
Workday Prism Analytics Training Guide, Module: Data Prep and Transformation, Subtopic: Handling Multi-Instance Fields with Explode Stages

NEW QUESTION # 35

In a Prism project, you have a dataset containing customer purchase transactions, including the customer ID, purchase amount, and purchase date. You want to analyze the total purchase amount for each customer over the entire period. What transformation stage should you apply to calculate the total purchase amount for each customer?

- **A. Group By**
- B. Explode
- C. Join
- D. Union

Answer: A

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

In Workday Prism Analytics, calculating the total purchase amount for each customer requires aggregating data by customer ID. According to the official Workday Prism Analytics study path documents, the appropriate transformation stage for this task is a Group By stage (option C). The Group By stage allows you to group the dataset by a specific field (e.g., customer ID) and apply aggregation functions, such as SUM, to calculate the total purchase amount for each customer. For example, you would group by customer ID and use SUM(purchase_amount) to compute the total. This stage reduces the dataset to one row per customer, with the aggregated total purchase amount, enabling the desired analysis over the entire period.

The other options are incorrect:

- * A. Join: A Join stage combines data from two datasets based on a matching condition, but it does not aggregate data to calculate totals.
- * B. Union: A Union stage appends rows from one dataset to another, which does not help with calculating totals per customer.
- * D. Explode: An Explode stage transforms multi-instance fields into multiple rows, which is unrelated to aggregating purchase amounts.

The Group By stage is the correct choice to aggregate purchase amounts by customer, facilitating the analysis of totals over the entire period.
