Generally speaking, UiPath-ADPv1 certification has become one of the most authoritative voices speaking to us today. Let us make our life easier by learning to choose the proper UiPath-ADPv1 test answers, pass the exam, obtain the certification, and be the master of your own life, not its slave. There are so many of them that they make you believe that their product is what you are looking for. With one type of UiPath-ADPv1 Exam study materials are often shown one after another so that you are confused as to which product you should choose.

We are in a constant state of learning new knowledge, but also a process of constantly forgotten, we always learned then forget, how to solve this problem, the answer is to have a good memory method, our UiPath-ADPv1 exam question will do well on this point. Our UiPath-ADPv1 real exam materials have their own unique learning method, abandon the traditional rote learning, adopt diversified memory patterns, such as the combination of text and graphics memory method, to distinguish between the memory of knowledge. Our UiPath-ADPv1 learning reference files are so scientific and reasonable that you can buy them safely.

2026 UiPath-ADPv1 Exams Torrent - Trustable UiPath UiPath (ADPv1) Automation Developer Professional - Sample UiPath-ADPv1 Test Online

To provide our users with the UiPath (ADPv1) Automation Developer Professional (UiPath-ADPv1) latest questions based on the sections of the actual exam questions, we regularly update our UiPath-ADPv1 study material. Also, Fast2test provides free updates

of UiPath UiPath-ADPv1 Exam Questions for up to 365 days. For customers who don't crack the UiPath UiPath-ADPv1 test after using our product, Fast2test will provides them a refund guarantee according to terms and conditions.

UiPath UiPath-ADPv1 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> UiPath Studio Fundamentals: In this section, the focus is given to the understanding of Robotic Process Automation (RPA) concepts; it covers UiPath Studio and its components, Working with the UiPath user interface, project creation, management, and version control.
Topic 2	<ul style="list-style-type: none"> Design and Development: This section covers designing workflows using sequences, flowcharts, and state machines, building reusable components with libraries, exception handling and debugging techniques, etc.
Topic 3	<ul style="list-style-type: none"> UiPath Activities: In this section, the discussion is related to various UiPath activities for UI interaction, data manipulation, control flow, and more.
Topic 4	<ul style="list-style-type: none"> Debugging and Testing: This section is about utilizing logging and debugging tools and adopting unit testing and test automation strategies.

UiPath (ADPv1) Automation Developer Professional Sample Questions (Q26-Q31):

NEW QUESTION # 26

Considering that the attached table is stored in a variable called "dt":

	A	B	C
1	No.	Item	Quantity
2		1 apple	10
3		2 orange	20
4		3 mango	5
5		4 kiwi	80
6		5 pear	1
7		6 apple	5
8		7 apple	12
9		8 mango	15

Which LINQ query can be used to return the maximum total Quantity?

- A. `dt.AsEnumerable. Max(Function(x) Convert.ToInt32(x("Quantity").ToString))("Item")`
- B. `dt.AsEnumerable. OrderByDescending(Function(x) Convert.ToInt32(x("Quantity").ToString)).First.Item("Quantity")`
- C. `dt.AsEnumerable. GroupBy(Function(x) x("Item").ToString). Max(Function(x) x.Sum(Function(y) Convert.ToInt32(y("Quantity").ToString)))`
- D. `dt.AsEnumerable. Max(Function(x) Convert.ToInt32(x("Quantity").ToString))`

Answer: C

Explanation:

The LINQ query that can be used to return the maximum total Quantity from the attached table is `dt.AsEnumerable`.

GroupBy(Function(x) x("Item").ToString). Max(Function(x) x.Sum(Function(y) Convert.ToInt32(y("Quantity").ToString))). This query uses the LINQ methods AsEnumerable, GroupBy, Max, and Sum to manipulate the data in the dt variable. The dt variable is a DataTable that contains the following data:

No.	Item	Quantity
1	apple	10
2	orange	20
3	mango	50
4	kiwi	80
5	pear	1
6	apple	5
7	mango	15

The AsEnumerable method converts the DataTable into an Enumerable collection of DataRow objects. The GroupBy method groups the elements of the collection by the value of the Item column, creating a collection of groups. Each group has a key, which is the Item name, and a list of elements, which are the DataRows that have the same Item value. The Max method returns the maximum value of the collection, based on a selector function. The selector function is a lambda expression that calculates the sum of the Quantity column for each group. The Sum method returns the sum of the elements in a collection, based on a selector function. The selector function is a lambda expression that converts the value of the Quantity column into an integer.

Therefore, the query will group the DataRows by the Item name, calculate the total Quantity for each group, and return the maximum total Quantity among the groups. The maximum total Quantity is 80, which corresponds to the group with the key "kiwi". References:

[Enumerable.GroupBy Method], [Enumerable.Max Method], [Enumerable.Sum Method]

NEW QUESTION # 27

In the Robotic Enterprise (RE) Framework, at which point should a developer log a clear message with the Logging Level set to "Information," adhering to the best practices for automating a production-level process?

- A. Whenever data is fetched from external sources.
- B. Whenever an exception is caught in a Catch block.
- C. Whenever the robot encounters an error on a Queue Item.
- D. Whenever an argument or value is used.

Answer: A

Explanation:

In the Robotic Enterprise Framework (REFramework), best practices for logging at the "Information" level suggest recording entries that are informative about the progress of the automation. This would typically include:

The start and end of a transaction.

Status updates of a transaction.

The result of an operation, like a successful data retrieval or submission.

From the provided options, the one that aligns best with this approach would be:

B: Whenever data is fetched from external sources.

This action is a significant step in most automation processes because it usually represents a point where the robot interacts with systems outside of its immediate control, and it's important to have a record that this step has been completed successfully. It provides a clear and traceable log entry that helps in understanding the workflow's progress and is useful for audit trails and

troubleshooting.

Logging every time an argument or value is used (C) would be excessive and not practical for production-level processes. Logging every exception (A) and error on a Queue Item (D) would typically be done at a "Warning" or "Error" level, not "Information".

NEW QUESTION # 28

Given the following workflow:

The screenshot shows a workflow with three steps:

- Step 1: Assign** - Variable `arr` is assigned the value `{"apple pear orange"}`.
- Step 2: Expression Editor** - The expression `1 {"apple pear orange", "mango kiwi"}` is entered, which concatenates the string in `arr` with "mango kiwi".
- Step 3: Expression Editor** - The expression `1 arr.SelectMany(Function(x) x.Split(" ")).ToArray()` is entered, which splits the concatenated string by spaces and returns an array of the resulting words.
- Step 4: Log Message** - The message `String.Join(", ", arr)` is logged, which joins the array elements with commas and spaces.

What will be the output of the Log Message activity?

- A. apple, pear, orange, mango, kiwi
- B. "apple pear orange", "mango kiwi"
- C. apple, pear, orange
- D. apple pear orange, mango kiwi

Answer: A

NEW QUESTION # 29

How do you subtract a specific TimeSpan from "Today" in VB.NET?

- A. `DateTime.SubtractSpanFrom(Today, TimeSpan)`
- B. `Today.Subtract(TimeSpan)`
- C. `DateTime.Now - TimeSpan`
- D. `Today.SubtractUsingDate(-TimeSpan)`

Answer: B

Explanation:

The Today property of the DateTime structure returns the current date with the time component set to zero. The Subtract method

of the `DateTime` structure returns a new `DateTime` object that is the result of subtracting a specified time interval from this instance². The `TimeSpan` structure represents a time interval that can be expressed in days, hours, minutes, seconds, and milliseconds³. Option D is the correct way to subtract a specific `TimeSpan` from `Today` in VB.NET. For example, the following code snippet subtracts one day and two hours from the current date and displays the result:

```
Dim ts As New TimeSpan(1, 2, 0) ' One day and two hours
Dim result As DateTime = Today.Subtract(ts) ' Subtract from Today
Console.WriteLine(result.ToString("d")) ' Display the result
```

Option A is not valid, because there is no `SubtractSpanFrom` method in the `DateTime` structure. Option B is not correct, because it subtracts the `TimeSpan` from the current date and time, not just the date. Option C is not valid, because there is no `SubtractUsingDate` method in the `DateTime` structure.

References: 1: `DateTime.Today` Property (System) 2: `DateTime.Subtract` Method (System) 3: `TimeSpan` Structure (System)

NEW QUESTION # 30

A company needs to execute background automation without worrying about managing infrastructure. They want to scale easily and avoid provisioning virtual machines. Based on the information provided, which type of UiPath Automation Cloud robot should they use?

- A. Physical Servers Robots
- B. Cloud Robots - VM
- C. Hybrid Cloud Robots
- **D. Serverless Automation Cloud Robots**

Answer: D

Explanation:

Serverless Automation Cloud Robots are designed for background processes and are hosted entirely by UiPath. This means the company does not need to manage infrastructure or virtual machines. They are also instantly scalable, ideal for scenarios requiring cloud-native automation without provisioning effort.
