

# Free PDF Authoritative JN0-224 - Related Automation and DevOps, Associate (JNCIA-DevOps) Certifications

BTW, DOWNLOAD part of TrainingDumps JN0-224 dumps from Cloud Storage: <https://drive.google.com/open?id=1olulMT-unTNq4XxdMLQJGaDG8KWEQiw>

This is the most unique and helpful method of Juniper JN0-224 exam preparation. Web-based practice exam helps you study with more concentration because it gives you a simulated Juniper JN0-224 exam environment. This helps you in preventing Juniper JN0-224 Exam anxiety and also gives you a broad insight into the Juniper JN0-224 exam pattern. You can get examination experience before the actual Automation and DevOps, Associate (JNCIA-DevOps) (JN0-224) exam.

## Juniper JN0-224 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>• Rest API: This domain covers Junos REST API implementation, REST API Explorer tool, and cURL usage for HTTP-based device management and configuration.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>• Data Serialization: This domain addresses YAML and JSON formats used for structured data representation and exchange in network automation workflows.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>• NETCONF</li><li>• XML API: This domain focuses on XML syntax, XPath expressions, NETCONF protocol, and XML API functionality for programmatic device configuration and communication.</li></ul>
Topic 4	<ul style="list-style-type: none"><li>• Junos Automation Stack and DevOps Concepts: This domain covers fundamental automation tools, frameworks, APIs, and DevOps culture applicable to Junos platform operations and network management.</li></ul>
Topic 5	<ul style="list-style-type: none"><li>• Python</li><li>• PyEZ: This domain examines Python programming with PyEZ library for Junos automation, including JSNAPy, Jinja2 templates, RPC calls, exception handling, and device configuration management.</li></ul>

## 2026 JN0-224: Reliable Related Automation and DevOps, Associate (JNCIA-DevOps) Certifications

Our website offer considerate 24/7 services with non-stopping care for you after purchasing our JN0-224 learning materials. Although we cannot contact with each other face to face, but there are no disparate treatments and we treat every customer with consideration like we are around you at every stage during your review process on our JN0-224 Exam Questions. We will offer help insofar as I can. While our JN0-224 training guide is beneficiary even you lose your chance of winning this time.

### Juniper Automation and DevOps, Associate (JNCIA-DevOps) Sample Questions (Q49-Q54):

#### NEW QUESTION # 49

Which two statements about NETCONF are true? (Choose two.)

- A. It uses the operations layer to lock the configuration of a Junos device.
- B. It uses the messages layer to lock the configuration of a Junos device.
- C. It uses the operations layer to commit the configuration of a Junos device.
- D. It uses the messages layer to commit the configuration of a Junos device.

**Answer: A,C**

Explanation:

NETCONF (Network Configuration Protocol) operates through different layers, with the operations layer being particularly important for managing configurations:

Operations Layer (A & D): This layer is responsible for actions like locking and committing the configuration on a Junos device. The lock operation prevents other sessions from modifying the configuration, and the commit operation applies the configuration changes to the device.

Options B and C are incorrect because the messages layer handles the communication aspects, such as exchanging data between the client and server, not performing configuration operations like locking and committing.

Reference:

IETF RFC 6241 (NETCONF): Describes the protocol layers and their functions, with a focus on the operations layer.

Juniper Networks NETCONF Documentation: Provides insights into how NETCONF operations are managed in Junos

#### NEW QUESTION # 50

Which two PyEZ object methods are included by default when using a Python context manager? (Choose two.)

- A. lock () and unlock (>)
- B. pdiff() and diff()
- C. open() and close()
- D. |load() and commit ()

**Answer: A,C**

Explanation:

When using a Python context manager with Junos PyEZ, two key methods are automatically included:

open() and close(): These methods are used to establish and terminate a connection to a Junos device. When you use a context manager (the with statement), open() is called when entering the block, and close() is called when exiting, ensuring the connection is properly managed.

lock() and unlock(): These methods are used to lock the configuration database to prevent other users from making changes while you are working on it. When using a context manager, lock() is called at the start of the block, and unlock() is called at the end, ensuring safe configuration changes.

Supporting Reference:

Junos PyEZ Documentation: The documentation explains how context managers work in PyEZ, including the automatic invocation of open(), close(), lock(), and unlock() methods.

### NEW QUESTION # 51

Which two programming languages have a NETCONF library supported by Juniper Networks? (Choose two.)

- A. Ruby
- B. Go
- C. SLAX
- D. Python

**Answer: B,D**

Explanation:

Juniper Networks supports NETCONF libraries for several programming languages, including:

Python (B): Python has a well-supported NETCONF library called ncclient, which is widely used for automating network configurations across Junos devices.

Go (C): Go also has a NETCONF library (go-netconf), which provides similar functionalities for managing Junos devices.

Ruby (A) and SLAX (D) do not have widely recognized or supported NETCONF libraries directly from Juniper Networks, making Python and Go the correct choices.

Reference:

Juniper Networks NETCONF Documentation: Lists supported programming languages and libraries for interacting with NETCONF on Junos devices.

ncclient Documentation: The primary Python library for working with NETCONF.

### NEW QUESTION # 52

You are asked to use the REST API to retrieve interface configuration information from your Junos device. You decide to use a cURL HTTP GET command to retrieve this information.

In this scenario, which two statements are correct? (Choose two.)

- A. You can retrieve this data in HTML or JSON formats.
- B. You can retrieve this data in XML or JSON formats.
- C. You must include the authentication information with each request.
- D. You must have SSH enabled on the Junos device.

**Answer: B,C**

Explanation:

When using the REST API to retrieve interface configuration information from a Junos device:

Data Formats (C): The information can be retrieved in XML or JSON formats. These are the two standard data formats supported by the Junos REST API for representing configuration and operational data.

Authentication (D): For each HTTP request, especially when using tools like cURL, authentication information must be included. This is typically done using basic authentication (username and password) or an authentication token.

Option A is incorrect because HTML is not a supported format for REST API data retrieval in Junos, and Option B is incorrect because SSH is not required for REST API requests; the REST API typically uses HTTP/HTTPS.

Reference:

Junos REST API Documentation: Details the data formats (XML, JSON) supported by the Junos REST API and the need for authentication.

cURL Usage with REST API: Provides examples of how to use cURL with Junos REST API, including the necessity of providing authentication.

### NEW QUESTION # 53

Which two standard logical operators does XPath support? (Choose two.)

- A. MAMD
- B. IOR
- C. AND
- D. NOT

**Answer: C,D**

#### Explanation:

XPath is a query language used for selecting nodes from an XML document. It supports various logical operators that can be used to create complex queries. The two standard logical operators supported by XPath are:

NOT: This operator negates a condition, returning true if the condition is false, and vice versa.

AND: This operator is used to combine two conditions, and it returns true only if both conditions are true.

Option A (IOR) and Option D (MAMD) are not standard XPath operators.

Supporting Reference:

XPath Documentation: The W3C XPath specification lists the standard operators supported in XPath, including AND and NOT.

#### NEW QUESTION # 54

.....

We believe that our JN0-224 exam questions that you can use our products to prepare the exam and obtain your dreamed certificates. We all know that if you desire a better job post, you have to be equipped with appropriate professional quality. Our JN0-224 study materials are willing to stand by your side and provide attentive service, and to meet the majority of customers, we sincerely recommend our JN0-224 Study Materials to all customers, for our rich experience and excellent service are more than you can imagine. There are many advantages of JN0-224 training guide for you to try.
