IAPP Certified Information Privacy Professional/United States (CIPP/US) Sample Questions (Q131-Q136):

NEW QUESTION # 131

If an organization maintains data classified as high sensitivity in the same system as data classified as low sensitivity, which of the following is the most likely outcome?

- A. Temporary employees will be able to find the data necessary to fulfill their responsibilities.
- B. The organization will still be in compliance with most sector-specific privacy and security laws.
- C. The organization will be able to address legal discovery requests efficiently without producing more information than necessary.
- D. The impact of an organizational data breach will be more severe than if the data had been segregated.

Answer: D

Explanation:

Data classification is the process of categorizing data based on its sensitivity and importance to determine its level of confidentiality and protection. Data classification helps organizations apply appropriate security and compliance measures to ensure each category receives proper protection. Data classification also helps organizations identify which data is subject to specific privacy laws and regulations, such as the GDPR, HIPAA, or CCPA, and how to handle data subject requests, data breaches, or legal discovery. If an organization maintains data classified as high sensitivity, such as personal information, financial information, or health information, in the same system as data classified as low sensitivity, such as public information or internal information, it increases the risk of exposing the high sensitivity data in the event of a data breach. A data breach can result in legal consequences, reputational damage, and loss of trust from customers and stakeholders. Therefore, it is advisable to segregate data based on its classification and apply different levels of encryption, access control, and monitoring to each category. This way, the organization can minimize the impact of a data breach and protect the privacy and security of its data assets.

NEW QUESTION # 132

SCENARIO

Please use the following to answer the next QUESTION:

A US-based startup company is selling a new gaming application. One day, the CEO of the company receives an urgent letter from a prominent EU-based retail partner. Triggered by an unresolved complaint lodged by an EU resident, the letter describes an ongoing investigation by a supervisory authority into the retailer's data handling practices.

The complainant accuses the retailer of improperly disclosing her personal data, without consent, to parties in the United States. Further, the complainant accuses the EU-based retailer of failing to respond to her withdrawal of consent and request for erasure of her personal data. Your organization, the US-based startup company, was never informed of this request for erasure by the EU-based retail partner. The supervisory authority investigating the complaint has threatened the suspension of data flows if the parties involved do not cooperate with the investigation. The letter closes with an urgent request: "Please act immediately by identifying all personal data received from our company." This is an important partnership. Company executives know that its biggest fans come from Western Europe; and this retailer is primarily responsible for the startup's rapid market penetration.

As the Company's data privacy leader, you are sensitive to the criticality of the relationship with the retailer.

Upon review, the data privacy leader discovers that the Company's documented data inventory is obsolete.

What is the data privacy leader's next best source of information to aid the investigation?

- A. Database schemas held by the retailer
- **B. Interviews with key marketing personnel**
- C. Lists of all customers, sorted by country
- D. Reports on recent purchase histories

Answer: B

Explanation:

The data privacy leader needs to identify all the personal data that the Company has received from the retailer, as well as the purposes, retention periods, and sharing practices of such data. Since the data inventory is obsolete, the data privacy leader cannot rely on it to provide accurate and complete information. Therefore, the next best source of information is to interview the key marketing personnel who are responsible for the partnership with the retailer and the use of the personal data. The marketing personnel can provide insights into the data flows, the data categories, the data processing activities, and the data protection measures that the Company has implemented. They can also help the data privacy leader to locate the relevant documents, contracts, and records that can support the investigation. NEW QUESTION # 133

The rules for "e-discovery" mainly prevent which of the following?

- A. A breach of an organization's data retention program
- B. The practice of employees using personal devices for work
- C. The loss of information due to poor data retention practices
- **D. A conflict between business practice and technological safeguards**

Answer: D

Explanation:

E-discovery is the process by which parties share, review, and collect electronically stored information (ESI) to use as evidence in a legal matter. The rules for e-discovery mainly prevent a conflict between business practice and technological safeguards, because they establish the standards and procedures for preserving, collecting, reviewing, and producing ESI in a way that balances the needs of litigation with the realities of technology. For example, the Federal Rules of Civil Procedure (FRCP) provide guidance on the scope, timing, format, and methods of e-discovery, as well as the sanctions for failing to comply with e-discovery obligations. The rules also encourage cooperation and communication among parties and courts to resolve e-discovery issues efficiently and effectively. By following the rules for e-discovery, parties can avoid disputes, delays, and costs that may arise from incompatible or inconsistent business and technological practices.

NEW QUESTION # 134

What consumer protection did the Fair and Accurate Credit Transactions Act (FACTA) require?

- **A. The truncation of account numbers on credit card receipts**
- B. The ability for the consumer to correct inaccurate credit report information
- C. The right to request removal from e-mail lists
- D. Consumer notice when third-party data is used to make an adverse decision

Answer: A

Explanation:

The Fair and Accurate Credit Transactions Act (FACTA) is an amendment to the Fair Credit Reporting Act (FCRA) that was enacted in 2003. FACTA aims to enhance consumer protection against identity theft and fraud by requiring various measures, such as free annual credit reports, fraud alerts, and identity theft prevention programs. One of the consumer protections that FACTA requires is the truncation of account numbers on credit card receipts. This means that only the last four or five digits of the account number can be printed on the receipt, while the rest must be masked or deleted. This reduces the risk of unauthorized access or use of the account number by third parties who may obtain the receipt.

NEW QUESTION # 135

What role does the U.S. Constitution play in the area of workplace privacy?

- A. It provides enforcement resources to large employers, but not to small businesses
- **B. It provides significant protections to federal and state governments, but not to private-sector employment**
- C. It provides legal precedent for physical information security, but not for electronic security
- D. It provides contractual protections to members of labor unions, but not to employees at will

Answer: B

Explanation:

The U.S. Constitution plays a limited role in the area of workplace privacy, because it mainly applies to the actions of the government, not private employers. The Fourth Amendment protects the right of the people to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures. The Supreme Court has interpreted this right to include a reasonable expectation of privacy in certain situations, such as in one's home, car, or personal belongings. However, this right does not extend to private-sector employees, who are not protected by the Constitution from the actions of their employers, unless the employer is acting as an agent of the government. Private-sector employees may have some privacy rights under state laws, common law, or contractual agreements, but these vary depending on the jurisdiction and the circumstances.

Public-sector employees, on the other hand, are protected by the Constitution from unreasonable searches and seizures by their employers, who are considered part of the government. Public-sector employees have a reasonable expectation of privacy in their workplace, unless there is a legitimate work-related reason for the search or seizure, such as to ensure safety, security, or efficiency. Public-sector employers must also comply with the due process and equal protection clauses of the Fifth and Fourteenth Amendments, which prohibit the government from depriving any person of life, liberty, or property without due process of law, or from denying any person the equal protection of the laws. These clauses protect public-sector employees from arbitrary or discriminatory actions by their employers that affect their employment status or benefits.

Therefore, the U.S. Constitution plays a significant role in the area of workplace privacy for federal and state governments, but not for private-sector employment, because it only regulates the actions of the government, not private actors.

NEW QUESTION # 136

.....

Are you ready to take your career to the next level with the Certified Information Privacy Professional/United States (CIPP/US) (CIPP-US)? Look no further than Dumpkiller for all of your Certified Information Privacy Professional/United States (CIPP/US) (CIPP-US) exam needs.
