## Pass Guaranteed Quiz UiPath - Latest UiPath-SAIv1 - UiPath Specialized AI Associate Exam (2023.10) Reliable Exam Cram

Our desktop UiPath UiPath-SAIv1 practice exam software is designed for all those candidates who want to learn and practice in the actual UiPath Specialized AI Associate Exam (2023.10) (UiPath-SAIv1) exam environment. This desktop practice exam software completely depicts the UiPath UiPath-SAIv1 Exam scenario with proper rules and regulations so you can practice all the hurdles and difficulties.

## UiPath Specialized AI Associate Exam (2023.10) Sample Questions (Q162-Q167):

NEW QUESTION # 162

What is the main difference between an array and a list in UiPath?

- A. An array is a dynamic-sized collection of elements of the same type while a list is a fixed-size collection of elements of the same type.
- **B. An array is a fixed-size collection of elements of the same type while a list is a dynamic-sized collection of elements of the same type.**
- C. An array is a fixed-size collection of elements of different types while a list is a dynamic-sized collection of elements of the same type.
- D. An array is a fixed-size collection of elements of the same type while a list is a dynamic-sized collection of elements of different types.

**Answer: B**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

\* Arrays in UiPath (VB.NET) are fixed-size and must be initialized with a defined number of elements of the same type.

\* Lists (List<T>) are dynamic and allow you to add/remove elements at runtime, but still enforce type safety (same type elements).

\* UiPath Documentation Reference: Collections in UiPath Academy # RPA Developer Foundation # Data Manipulation

### NEW QUESTION # 163

What will be the outcome when executing a Try Catch activity with a sequence placed within the Try section and no Catches section present?

- A. In case of an exception, a System Exception will be caught by default.
- B. Due to a validation error, the workflow will not execute.
- **C. Process execution will terminate only if the sequence throws an exception.**
- D. The sequence will result in a runtime error.

**Answer: C**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

If a Try Catch activity has no defined Catch blocks and the Try section throws an exception, the exception is not caught and will propagate, potentially terminating the workflow.

However, if no exception occurs, the process continues normally.

The activity does not result in validation errors just because Catch blocks are empty.

Try Catch Activity - UiPath Docs

### NEW QUESTION # 164

Which of the following is a type of communication that is typically interpreted by UiPath Communications Mining?

- **A. Shared email inboxes**
- B. Scanned letters
- C. Real-time chat data
- D. Call data in real-time

**Answer: A**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

UiPath Communications Mining is designed to process and analyze unstructured communications like those from shared email inboxes, support tickets, and text-based messages.

\* It uses NLP models to classify, extract, and label insights from communication data, typically from email systems.

\* UiPath Documentation Reference: Communications Mining Overview

### NEW QUESTION # 165

What information does the comparison between two cohorts display on the Comparison page in UiPath Communications Mining?

- A. Differences in verbatim length between Group A and Group B.
- B. Verbatim content for each label.
- **C. Total verbatim count and proportion for each label.**
- D. Entity count for each metadata.

**Answer: C**

Explanation:

According to the UiPath documentation, UiPath Communications Mining is a tool that enables you to analyze text-based communications data, such as customer feedback, support tickets, or chat transcripts, using natural language processing (NLP) and machine learning (ML) techniques<sup>1</sup>. One of the features of UiPath Communications Mining is the Comparison page, which allows you to compare two cohorts of verbatims based on different criteria, such as date range, source, metadata, or label<sup>2</sup>. The Comparison page displays the following information for each cohort<sup>3</sup>:

Total verbatim count: The number of verbatims in the cohort.

Proportion for each label: The percentage of verbatims in the cohort that are assigned to each label. A label is a category or a topic that is relevant for the analysis, such as sentiment, intent, or issue type. Labels can be predefined or custom-defined by the user.

Statistical significance: The p-value that indicates whether the difference in proportions between the two cohorts is statistically significant or not. A p-value less than 0.05 means that the difference is unlikely to be due to chance.

The Comparison page also provides a visual representation of the proportions for each label using a bar chart, and allows the user to drill down into the verbatim content for each label by clicking on the bars<sup>3</sup>. Therefore, the correct answer is A.

## NEW QUESTION # 166

What information should be provided when adding a classification label for the OOB (Out Of the Box) labeling template?

- A. Name, Input to be labeled. Attribute name, and Shortcut.
- B. Name, Classification type, Attribute name, and Shortcut.
- **C. Name, Classification type. Input to be labeled. Attribute name. Shortcut, and Color.**
- D. Name, Classification Type. Attribute name. Color, and Shortcut.

**Answer: C**

Explanation:

When setting up a classification label in UiPath's Out Of the Box (OOB) labeling templates, you need to provide several key details: the name of the label, the classification type (which defines the kind of label), the input to be labeled, the attribute name that describes the label's context, a shortcut for quick access, and a color for visual distinction. These fields ensure the label is fully defined and easy to manage in workflows.
