Cisco Implementing and Operating Cisco Security Core Technologies Sample Questions (Q407-Q412):

NEW QUESTION # 407

What does Cisco AMP for Endpoints use to help an organization detect different families of malware?

- A. Spero Engine with machine learning to perform dynamic analysis
- B. Tetra Engine to detect malware when the endpoint is connected to the cloud
- C. Clam AV Engine to perform email scanning
- D. Ethos Engine to perform fuzzy fingerprinting

Answer: D

Explanation:

ETHOS is the Cisco file grouping engine. It allows us to group families of files together so if we see variants of a malware, we mark the ETHOS hash as malicious and whole families of malware are instantly detected.

ETHOS is the Cisco file grouping engine. It allows us to group families of files together so if we see variants of a malware, we mark the ETHOS hash as malicious and whole families of malware are instantly detected.

Reference:

ETHOS = Fuzzy Fingerprinting using static/passive heuristics

ETHOS is the Cisco file grouping engine. It allows us to group families of files together so if we see variants of a malware, we mark the ETHOS hash as malicious and whole families of malware are instantly detected.

ETHOS = Fuzzy Fingerprinting using static/passive heuristics

NEW QUESTION # 408

Which attribute has the ability to change during the RADIUS CoA?

- A. NTP
- B. Authorization
- C. Accessibility
- D. Membership

Answer: B

Explanation:

The RADIUS Change of Authorization (CoA) feature provides a mechanism to change the attributes of an authentication, authorization, and accounting (AAA) session after it is authenticated.
