Our Salesforce PDII Exam will provide you with exam questions with verified answers that reflect the actual exam. These questions and answers provide you with the experience of taking the actual test. High quality and Value for the PDII Exam: 100% guarantee to Pass Your Salesforce Business Solutions PDII exam and get your Salesforce Business Solutions Certification.

How much PDII Exam Cost

The price of the Salesforce Certified Platform Developer II (PDII) Exam is \$200 USD.

The PDII certification exam covers a wide range of topics related to Salesforce development, including Apex programming, Lightning Components, and application design. Successful candidates will have a strong understanding of the Salesforce development platform and be able to design and develop complex applications that meet business requirements. The PDII certification is highly regarded in the Salesforce developer community and is a valuable asset for developers looking to advance their careers in this field.

To be eligible for the Salesforce PDII Certification Exam, candidates must have obtained the Salesforce Certified Platform Developer I certification and have at least two years of experience in developing custom applications on the Salesforce platform. PDII Exam consists of 60 multiple-choice questions and five coding challenges that test the candidate's ability to design, develop, and deploy complex applications on the Salesforce platform. PDII exam covers a wide range of topics, including data modeling, Apex programming, Lightning components, and integration with external systems. Upon passing the exam, candidates will receive the Salesforce Certified Platform Developer II certification, which is recognized as a valuable credential by employers and clients worldwide.

Pass Guaranteed Quiz 2026 Salesforce PDII: The Best Free Platform Developer II Sample

If you are really intended to pass and become Salesforce PDII exam certified then enrolled in our preparation program today and avail the intelligently designed actual questions in two easy and accessible formats, PDF file and preparation software. TorrentExam is the best platform, which offers Braindumps for PDII Certification Exam duly prepared by experts. Our PDII exam material is good to PDII pass exam in a week.

Salesforce Platform Developer II Sample Questions (Q147-Q152):

NEW QUESTION # 147

A developer needs to implement a historical Task reporting feature that allows users, assigned to a custom profile named "Auditors", to perform searches against the Tasks related to the Account object.

The developer must ensure the search is able to return Tasks that are between 12 and 24 months old. It should exclude any tasks which have been deleted, and include Tasks whether archived or not.

Given the following code, which select statement should be inserted at the placeholder as a valid way to retrieve the Tasks ranging from 12 to 24 months old?

□

- A. □
- B. □
- C. □
- D. □

Answer: C

Explanation:

To retrieve Tasks that are between 12 and 24 months old, we need to use a SOQL query that filters based on the CreatedDate. The query must exclude deleted records and include both active and archived tasks. Since Tasks can be archived after a certain period (typically 12 months), we must ensure the query includes these as well.

* Option C is correct because it uses ALL ROWS in the SOQL query, which includes both active and archived (soft-deleted) records. The query also correctly uses a range for CreatedDate to ensure it selects Tasks created between 12 to 24 months ago.

* Option A is incorrect because it does not include the ALL ROWS keyword, which is necessary to include archived Tasks in the results.

* Option B is incorrect because it only retrieves Tasks created in the last 12 months, not between 12 to 24 months ago.

* Option D is incorrect because it does not filter Tasks based on their creation date correctly to include only those that are between 12 and 24 months old.

NEW QUESTION # 148

A company represents their customers as Accounts that have an External ID field called Customer_Number__c. They have a custom Order (Order__c) object, with a Lookup to Account, to represent Orders that are placed in their external order management system (OMS). When an order is fulfilled in the OMS, a REST call to Salesforce should be made that creates an Order record in Salesforce and relates it to the proper Account.

What is the optimal way to implement this?

- A. Perform a REST POST to update the Order__c and specify the Account's Customer_Number__c in it.
- B. Perform a REST GET on the Account and a REST POST to update the Order__c with the Account's record ID.
- C. Perform a REST PATCH to upsert the Order__c and specify the Account's Customer_Number__c in it.
- D. Perform a REST GET on the Account and a REST PATCH to upsert the Order__c with the Account's record ID.

Answer: C

NEW QUESTION # 149

A business process requires sending new Account records to an external system. The Account Name, Id, CreatedDate, and CreatedById must be passed to the external system in near real-time when an Account is Inserted without error.

How should a developer achieve this?

- A. Use a Process Builder that calls an @InvocableMethod method.
- B. Use a Workflow rule that calls an @InvocableMethod method.
- C. Use a before insert trigger and a Queueable class.
- D. Use a before insert trigger and an @future method.

Answer: C

NEW QUESTION # 150

Exhibit:

□

The test method above tests in Apex trigger that the developer knows will make a lot of queries when a lot of Accounts are simultaneously updated to be customers.

The test method fails at the Line 20 because of too many SOQL queries.

What is the correct way to fix this?

- A. Add Test.startTest() before Line 18 of the code and add Test.stopTest() after line 18 of the code
- B. Change the DataFactory class to create fewer Accounts so that the number of queries in the trigger is reduced
- C. Add Test.startTest() before and Test.stopTest() after both Line 7 of the code and Line 20 of the code
- D. Replace most of the Apex Trigger with Process Builder processes to reduce the number of queries in the trigger

Answer: A

Explanation:

NEW QUESTION # 151

Universal Containers develops a Visualforce page that requires the inclusion of external JavaScript and CSS files. They want to ensure efficient loading and caching of the page.

Which feature should be utilized to achieve this goal?

- A. ActionFunction
- B. RemoteAction
- C. Static resources
- D. PageBlockTable

Answer: C

Explanation:

Static resources are ideal for efficient loading and caching of external files in Visualforce. They allow bundling and minimizing HTTP requests.
