How 2Pass4sure Can Help You in Salesforce OmniStudio-Developer Exam Preparation?

A lot of things can't be tried before buying or the product trial will charge a certain fee, but our OmniStudio-Developer exam questions are very different, you can try it free before you buy it. It's like buying clothes, you only know if it is right for you when you try it on. In the same way, in order to really think about our customers, we offer a free trial version of our OmniStudio-Developer study prep for you, so everyone has the opportunity to experience a free trial version of our OmniStudio-Developer learning materials.

Earning the Salesforce OmniStudio-Developer Certification is a significant accomplishment that can help professionals advance their careers. Salesforce Certified OmniStudio Developer certification is recognized by employers and clients as a symbol of excellence in OmniStudio development. With this certification, professionals can demonstrate their expertise in developing and customizing solutions using the OmniStudio platform, which can lead to better job opportunities and higher salaries.

Salesforce Certified OmniStudio Developer Sample Questions (Q62-Q67):

NEW QUESTION # 62

A developer needs to transform contact data into a JSON array.

Given the input JSON shown above, what are two ways a developer could configure a DATA Raptor transform to achieve the expected Output JSON? Choose 2 answers

- A. Use a formula LIST(Contact), and add the output of the formula as the input in the Transform tab.
- B. Set the input JSON Path as Contact and the OutPut JSON Path as List (Contact)
- C. Set the Input JSON Path as Contact the out JSON Path as Contact and the output Data type as List.
- D. Set the Input JSON path as List(Contact) and the Output JSON Path as Contact.

Answer: A,C

Explanation:

A DataRaptor Transform can be used to transform data from one format to another, such as JSON, XML, or CSV. The developer can specify the input and output paths for each field in the Transform tab. The developer can also use formulas to manipulate data in the Formula tab1. To transform contact data into a JSON array, the developer can use either of these methods:

* Use a formula LIST(Contact), and add the output of the formula as the input in the Transform tab. This will create a list of contact objects from the input JSON and output it as a JSON array.

* Set the Input JSON Path as Contact, the Output JSON Path as Contact, and the Output Data Type as List. This will output each contact object as an element of a JSON array.

NEW QUESTION # 63

A developer needs to change some field labels on a FlexCard. The FlexCard is currently deployed to production. The developer that the best course of action is to version the FlexCard rather than cloning it.

Which factor would lead the developer to this decision?

- A. Another team member is developing new action, fields and styling for the current version of the FlexCard.
- B. All instance of the FlexCard must be updated with the changes.
- C. The new and current versions will be displayed together on the same target.
- D. The new version of the FlexCard will be used in a new Console, and the current version of the FlexCard should remain unchanged.

Answer: A

NEW QUESTION # 64

Refer to the exhibit below. A developer has configured an Integration Procedure element with SEND/RESPONSE TRANSFORMATIONS as shown.

Alternatively, how could the developer configure Additional Input to send exactly the same data? Assume that the developer checked Send Only Additional Input.

- A. ☐
- B. ☐
- C. ☒
- D. ☐

Answer: C

Explanation:

The Additional Input property allows the developer to specify additional input parameters to be sent to the Integration Procedure element. The input parameters can be specified as a JSON object or as a list of key-value pairs. If the developer checked Send Only Additional Input, then only the input parameters specified in Additional Input are sent, and the SEND/RESPONSE TRANSFORMATIONS are ignored. Therefore, the developer needs to specify the same input parameters as in the SEND/RESPONSE TRANSFORMATIONS in Additional Input. Option C shows how to do this using a JSON object with two properties:

"DBExtractAction:Account" and "DBExtractAction:SecondaryAccount". The values of these properties are the same as in the SEND/RESPONSE TRANSFORMATIONS.

NEW QUESTION # 65

..... configure Additional input to send exactly the same data? Assume that the developer checked Send Only Additional input.

- ☐ A)
- ☐ B)
- ☐ C)
- ☐ D)

- **A. Option D**
- B. Option C
- C. Option A
- D. Option B

Answer: A

NEW QUESTION # 66

A developer has an existing DataRaptor Load that insert Contact records with inputs as LastName and firstName. The DataRaptor works as expected when previewed.

The developer creates an integration Procedure to test the DataRaptor and is using a SetValues element in the Integration Procedure to set the first name and last name for the contact record. The DataRaptor and Integration Procedure are set up as shown in the exhibit below.

When the developer executes the Integration procedure in preview, the following error message displays: Required fields are missing: [lastName]", How should the developer address this issue?

- A. The valid field names should be added in the Domain object field in the DataRaptor
- B. The Set values Action Keys should include the DataRaptor Post Action element name path, e.g LoadContactDetails, lastname
- **C. SetValuesContactDetails should have been added to Additional input of DataRaptor Post Action in Integration Procedure**
- D. The DataRaptor Post Action in the integration procedure should have been executed before the Set Values Action

Answer: C
