

Three Easy and User-Friendly BraindumpsPass Cisco 100-160 Exam Question Formats

P.S. Free & New 100-160 dumps are available on Google Drive shared by BraindumpsPass: <https://drive.google.com/open?id=1nWqDK70W2cBHamxN7SLbL5Mp8yAAj4T>

BraindumpsPass are responsible in every aspect. After your purchase our 100-160 practice braindumps, the after sales services are considerate as well. We have considerate after sales services with genial staff. They are willing to solve the problems of our 100-160 Exam Questions 24/7 all the time. About the dynamic change of our 100-160 study guide, they will send the updates to your mailbox according to the trend of the exam.

Cisco 100-160 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Vulnerability Assessment and Risk Management: This section of the exam measures the skills of a Risk Management Analyst and entails identifying and assessing vulnerabilities, understanding risk priorities, and applying mitigation strategies that help manage threats proactively within an organization's systems
Topic 2	<ul style="list-style-type: none">• Essential Security Principles: This section of the exam measures the skills of a Cybersecurity Technician and covers foundational cybersecurity concepts such as the CIA triad (confidentiality, integrity, availability), along with basic threat types and vulnerabilities, laying the conceptual groundwork for understanding how to protect information systems.
Topic 3	<ul style="list-style-type: none">• Endpoint Security Concepts: This section of the exam measures the skills of an Endpoint Security Specialist and includes securing individual devices, understanding protections such as antivirus, patching, and access control at the endpoint level, essential for maintaining device integrity.
Topic 4	<ul style="list-style-type: none">• Basic Network Security Concepts: This section of the exam measures the skills of a Network Defender and focuses on understanding network-level protections, including firewalls, VPNs, and intrusion detection prevention systems, providing insight into how threats are mitigated within network environments.
Topic 5	<ul style="list-style-type: none">• Incident Handling: This section of the exam measures the skills of an Incident Responder and centers on recognizing security incidents, responding appropriately, and containing threats—forming the essential foundation of incident response procedures.

2026 100-160 Sample Exam Pass Certify | Valid Reliable 100-160 Dumps

Sheet: Cisco Certified Support Technician (CCST) Cybersecurity

People always do things that will benefit them, so as get a certificate of the 100-160 test dumps. Obtaining a certificate means more opportunity, a good job, a better salary, and a bright. The benefits are numerous, and we give you a quicker method to achieve this. Our 100-160 Questions and answers list the knowledge point for you, and you just need to speed some of your time to practice. We are pass guarantee and money back guarantee. And the pass rate is 98.

Cisco Certified Support Technician (CCST) Cybersecurity Sample Questions (Q80-Q85):

NEW QUESTION # 80

Which encryption algorithm is commonly used for securing wireless network communication?

- A. SSL
- B. RC4
- C. DES
- D. AES

Answer: D

Explanation:

AES (Advanced Encryption Standard) is widely used for securing wireless network communications. It is considered a strong and secure symmetric encryption algorithm that provides confidentiality and data integrity in wireless networks. AES has become the standard encryption algorithm for securing Wi-Fi networks (WPA2).

NEW QUESTION # 81

Which of the following options is an example of a cybersecurity news and subscription service?

- A. Firewall
- B. VPN (Virtual Private Network)
- C. Email filtering software
- D. SIEM (Security Information and Event Management) system

Answer: D

Explanation:

A SIEM system is an example of a cybersecurity news and subscription service. It collects and analyzes security event data from various sources and provides real-time alerts and reports to enhance threat detection and management. It provides valuable insights into the cybersecurity landscape, including news and updates related to security incidents, vulnerabilities, and emerging threats.

NEW QUESTION # 82

An administrator wants to ensure that any files downloaded from the internet are automatically scanned for malicious code before execution. Which security control should be implemented?

- A. Host-based firewall
- B. Patch management system
- C. VPN client
- D. Anti-malware with real-time protection

Answer: D

Explanation:

According to the CCST Cybersecurity course, anti-malware solutions with real-time protection scan files as they are downloaded or opened, blocking malicious code before it runs.

"Real-time protection automatically inspects files, applications, and scripts as they are accessed or downloaded, preventing execution of malicious code." (CCST Cybersecurity, Endpoint Security Concepts, Malware Protection section, Cisco Networking Academy)

NEW QUESTION # 83

Which two basic metrics should be taken into consideration when assigning a severity to a vulnerability during an assessment? (Choose 2.)

- A. The age of the hardware running the software that contains the vulnerability
- **B. The likelihood that an adversary can and will exploit the vulnerability**
- C. The time involved in choosing replacement software to replace older systems
- **D. The impacts that an exploit of the vulnerability will have on the organization**

Answer: B,D

Explanation:

The CCST Cybersecurity course describes that risk scoring for vulnerabilities often involves likelihood and impact - similar to the CVSS (Common Vulnerability Scoring System) model.

"When prioritizing vulnerabilities, assess both the likelihood of exploitation and the potential impact to the organization. Likelihood measures how easy or probable it is for an adversary to exploit the weakness, while impact measures the consequences to confidentiality, integrity, and availability if exploitation occurs." (CCST Cybersecurity, Vulnerability Assessment and Risk Management, Risk Assessment and Prioritization section, Cisco Networking Academy) A is correct: Likelihood is a fundamental part of severity assessment.

B is correct: Impact determines how damaging an exploit would be.

C is incorrect: Time to choose replacement software is an operational consideration, not a severity metric.

D is incorrect: Hardware age may influence performance but does not directly define vulnerability severity.

NEW QUESTION # 84

What is tailgating in the context of cybersecurity?

- A. A cyber attack where an attacker manipulates and deceives an individual to reveal sensitive information.
- **B. A physical attack where an unauthorized person gains entry to a restricted area by following closely behind an authorized person.**
- C. A form of social engineering attack that uses SMS or text messages to trick victims into revealing sensitive information.
- D. A type of phishing attack that targets specific individuals or organizations.

Answer: B

Explanation:

Tailgating refers to the act of an unauthorized person gaining physical access to a secured area by closely following behind an authorized person who has just been granted access. This form of physical attack exploits the weakness in human behavior, as people tend to hold doors open for others out of politeness or assume that the person following them is authorized.

NEW QUESTION # 85

.....

Web-based 100-160 practice test of BraindumpsPass is accessible from any place. You merely need an active internet connection to take this Cisco 100-160 practice exam. Browsers including MS Edge, Internet Explorer, Safari, Opera, Chrome, and Firefox support this 100-160 Practice Exam. Additionally, this Cisco Certified Support Technician (CCST) Cybersecurity (100-160) test is supported by operating systems including Android, Mac, iOS, Windows, and Linux.
